CONTENTS

1. Introduction	1
1.1 The Search Process	2
1.2 The Nonexperimental Model-Building Restriction	4
1.3 The Objectives of the Book	5
1.4 The Organization of the Book	5
Part 1 Estimation and Inference	9
2. Traditional Statistical Models, Estimators, and Sampling Properties	11
2.1 The Linear Statistical Model	11
2.2 Point Estimation	13
2.2.1 The Least Squares Criterion	13
2.2.2 Sampling Properties of the Least Squares Estimator	15
2.2.3 The Maximum Likelihood Criterion	17
2.3 Reparameterizing the Statistical Model	18
2.3.1 Scalar Identity Covariance Model	18
2.3.2 The Orthonormal Model	19
2.3.3 An Alternative Canonical Form	19
2.4 On Gauging Estimator Performance	20
2.4.1 Decision Theory Framework	21
2.4.2 How to Choose a Decision Rule	22
2.4.3 The Measure Space	24
2.4.3a Squared Error Loss	24
2.4.3b Generalized Mean Square Error	26
2.5 Interval Estimation and Hypothesis Tests Under the Normality Assumption	27
2.5.1 Interval Estimation	28
2.5.2 Hypothesis Testing	29
2.6 An Example of the Sampling Performance of the Least Squares Estimator	31
2.6.1 The Sampling Experiment	31
2.6.2 The Sampling Results	31

2.7 Critique	36
2.8 Problems	38
2.8.1 Individual Exercises	44
2.8.2 Joint or Class Exercises	45
2.9 Some Matrix and Distribution Theorems	46
2.9.1 Matrix Algebra Relevant to Normal Theory	46
2.9.2 Matrix and Vector Differentiation, Kronecker Product, and Lag Operators	48
2.9.3 Normal Distributions	49
2.9.4 Chi Square, t , and F Distributions	50
2.9.5 Asymptotic Properties of Random Variables	52
2.10 References	53
3. Combining Sample and Other Information	54
3.1 Exact Prior Information	56
3.1.1 Performance Under Squared Error Loss	58
3.1.2 Performance Under the General Mean Square Error Criterion	60
3.1.3 The Pretest Estimator	61
3.1.3a Sampling Performance	62
3.1.3b Mean Square Error Norm	65
3.1.3c The Optimal Level of Significance	65
3.1.4 The Stein Rules	67
3.1.4a The James and Stein Rule	67
3.1.4b A Reformulated Rule	68
3.1.4c A Positive Rule	69
3.1.4d A Summary Comment	70
3.1.5 A Stein-Like Pretest Estimator	70
3.1.6 Some Remarks	71
3.2 Stochastic Prior Information	72
3.2.1 The Estimator	73
3.2.2 Sampling Comparisons	74
3.2.3 Stochastic Linear Hypotheses and Pretesting	76
3.2.4 Some Comments	77
3.3 Inequality Restrictions	78
3.3.1 The Inequality-Restricted Estimator	78
3.3.1a Primal-Dual Formulation	79
3.3.1b Kuhn-Tucker Conditions	80
3.3.2 The Sampling Properties	82
3.3.2a The Mean	83
3.3.2b The Risk	84
3.3.2c The Variance	87

3.3.3 Hypothesis Testing	88
3.3.3a Test Statistic and Pretest Estimator	88
3.3.3b Mean of the Inequality Pretest Estimator	89
3.3.3c Risk of the Inequality Pretest Estimator	90
3.3.3d Pretest Estimator Comparisons	91
3.3.4 Concluding Remarks	92
3.4 Prior Density Functions	94
3.4.1 Diffuse or Noninformative Prior	95
3.4.2 A Natural Conjugate Prior	97
3.4.2a Known σ^2	97
3.4.2b Unknown σ^2	98
3.4.3 Estimator Comparison	100
3.4.4 Hypothesis Testing	100
3.4.5 Some Comments	102
3.5 Critique and Recommendations	103
3.6 Problems	104
3.7 References	108

Part 2 Choice of Stochastic Assumptions 113

II.1 Alternative Covariance Structures: Problems of Choice and Estimation	113
II.2 Use and Sampling Properties of LS, GLS, EGLS, and ML Estimators	115
II.2.1 Consequences of LS and GLS Estimation	115
II.2.2 Properties of EGLS Estimators	117
II.2.3 Maximum Likelihood Estimation	118
II.2.4 Other Estimators	119
II.3 Analysis of Residuals	119
II.3.1 BLUS Residuals	120
II.3.2 Recursive Residuals	121
II.4 References	121

4. Heteroscedasticity 126

4.1 Existence of Heteroscedasticity and the Use of LS and GLS	126
4.2 Estimation Under Alternative Heteroscedastic Specifications	128
4.2.1 No Restrictions on the Variance of Each y_i	130
4.2.2 Variances Constant Within Subgroups of Observations	131
4.2.3 The Standard Deviation of y_i Is a Linear Function of Exogenous Variables	133

4.2.4 The Variance of y_t Is a Linear Function of Exogenous Variables	136
4.2.4a A Special Case: The Hildreth–Houck Random Coefficient Model	138
4.2.5 The Variance of y_t Is Proportional to the Square of Its Expectation	139
4.2.5a An Extension: The Variance of y_t Is Proportional to a Power of Its Expectation	140
4.2.6 The Log of the Variance of y_t Is a Linear Function of Exogenous Variables—Multiplicative Heteroscedasticity	141
4.2.6a A Special Case: The Variance of y_t Is Proportional to a Power of One of the Explanatory Variables	143
4.2.7 Some Remarks on Known Variances, Grouped Data, Spurious Correlations, and Functional Form	143
4.2.7a Known Variances	143
4.2.7b Grouped Data	143
4.2.7c Spurious Correlations	144
4.2.7d Functional Form and Heteroscedasticity	144
4.3 General Tests for Heteroscedasticity	145
4.3.1 Glejser’s Test	145
4.3.2 Breusch–Pagan Test	146
4.3.3 Bartlett Test	147
4.3.4 Ramsey’s BAMSET	148
4.3.5 Goldfeld–Quandt Test	148
4.3.6 F Test Using BLUS Residuals	149
4.3.7 F Test Using Recursive Residuals	149
4.3.8 Szroeter’s Class of Tests	149
4.3.9 Nonparametric Tests	152
4.4 Some Properties of Estimators, Tests, and Pretest Estimators	158
4.5 Recommendations	159
4.5.1 Testing	160
4.5.2 Modeling	160
4.5.3 Estimation	161
4.6 Problems	161
4.6.1 Individual Exercises	162
4.6.2 Group or Class Exercises	164
4.7 References	165
5. Autocorrelation	170
5.1 Existence of Autocorrelation and the Use of Least Squares	170
5.1.1 LS estimation Under Autocorrelation	174

5.1.1a Efficiency	176
5.1.1b Bias in Variance Estimation	177
5.2 Estimation Under Alternative Autocorrelation Specifications	179
5.2.1 Estimation with AR(1) Errors	180
5.2.1a GLS Estimation	181
5.2.1b EGLS Estimation	182
5.2.1c NLS Estimation	184
5.2.1d ML Estimation	185
5.2.1e Properties	187
5.2.1f Bayesian Estimation	188
5.2.2 Estimation with AR(2) Errors	190
5.2.2a GLS Estimation	191
5.2.2b EGLS Estimation	192
5.2.2c NLS Estimation	193
5.2.2d ML Estimation	193
5.2.2e Properties	194
5.2.3 Estimation with Higher-Order AR Errors	194
5.2.4 A Particular AR(4) Process	195
5.2.5 Estimation with MA(1) Errors	196
5.2.5a The P Transformation	197
5.2.5b EGLS Estimation	197
5.2.5c NLS Estimation	199
5.2.5d ML Estimation	199
5.2.5e Bayesian Estimation	200
5.2.6 Estimation with Higher-Order MA Errors	201
5.2.6a NLS Estimation	202
5.2.6b ML Estimation	203
5.2.6c Properties	205
5.2.7 Estimation with ARMA Errors	206
5.2.7a NLS Estimation	206
5.2.7b ML Estimation	208
5.2.7c A Special Case	208
5.2.8 Remarks on Distributed Lag Models and Estimation in the Frequency Domain	208
5.3 Prediction in Models with Autocorrelated Errors	209
5.3.1 AR Errors	210
5.3.2 MA Errors	211
5.4 Testing for the Existence and Type of Autocorrelation	212
5.4.1 General Large-Sample Tests	212
5.4.1a Using Sample Autocorrelations	212
5.4.1b Testing the Significance of Coefficients	213

5.4.1c Likelihood Ratio Tests	213
5.4.1d Adequacy of Fit	215
5.4.1e Discriminating Between Dynamics and Autocorrelation	215
5.4.2 Testing for AR(1) Errors	216
5.4.2a The Durbin–Watson Test	216
5.4.2b Tests based on a Transformation of LS Residuals	218
5.4.2c The Berenblut–Webb Test	218
5.4.2d Testing for AR(1) Errors When X Contains a Lagged Dependent Variable	219
5.4.3 Some Tests for Alternatives Other Than AR(1) Errors	220
5.4.3a Durbin’s Test Based on the Periodogram of Residuals	220
5.4.3b Geary’s Sign Change Test	220
5.4.3c Some Generalizations of the Durbin–Watson Statistic	221
5.4.3d Power Evaluations	221
5.4.3e Testing for General AR or MA Errors When X Contains a Lagged Dependent Variable	222
5.5 Recommendations and Some Comments on Pretesting	223
5.6 Problems	224
5.6.1 Individual Exercises	225
5.6.2 Group or Class Exercises	232
5.7 References	233
6. Disturbance-Related Sets of Regression Equations	244
6.1 Sets of Equations with Contemporaneously Correlated Disturbances	245
6.1.1 Estimation	246
6.1.2 Hypothesis Testing	248
6.2 Goodness of Fit Measures	251
6.2.1 A Single Equation with Scalar Covariance Matrix	251
6.2.2 A Single Equation with Nonscalar Covariance Matrix	254
6.2.3 Sets of Equations	256
6.3 Sets of Equations with Unequal Numbers of Observations	257
6.4 Sets of Equations with First-Order Autoregressive Disturbances	260
6.4.1 Generalized Least Squares Estimation	261
6.4.2 Estimated Generalized Least Squares Estimation	265
6.4.3 Testing Hypotheses	267
6.5 Sets of Equations with First-Order Vector Autoregressive Disturbances	268
6.5.1 Estimation	269
6.5.2 Testing Hypotheses	272

6.6 Sets of Equations with Moving-Average or Higher-Order Autoregressive Disturbances	274
6.7 Recommendations	274
6.8 Estimation with a Singular Disturbance Covariance Matrix	275
6.8.1 Some Illustrations	275
6.8.2 The Restricted Generalized Inverse Estimator	278
6.8.3 Concluding Remarks	280
6.9 Problems	281
6.9.1 Individual Exercises	283
6.9.2 Group or Class Exercises	290

15.7.1 Individual Exercises	656
15.7.2 Joint or Class Exercises	657
15.8 References	657
16. Infinite Distributed Lags	661
16.1 Geometric Lag	662
16.1.1 Nonautocorrelated Disturbance e_t^*	663
16.1.1a Ordinary Least Squares Estimation	663
16.1.1b Bayesian Estimation	664
16.1.2 Autocorrelated Disturbance e_t^*	664
16.1.2a Methods That Need No Specific Assumption About the Disturbances	665
16.1.2a.1 Instrumental Variable Technique	665
16.1.2a.2 The Two-Stage Least-Squares Approach	666
16.1.2b Making Use of the Autocorrelation Structure of e_t^*	667
16.1.2b.1 Search and Iterative Procedures	667
16.1.2b.2 Wallis' Three-Step Procedure	668

16.1.2b.3 Bayesian Estimation	669
16.1.2c Making Use of the Fact That the Original Disturbance e_t Is Nonautocorrelated	669
16.1.2c.1 Koyck's Two-Step Procedure	669
16.1.2c.2 Cagan's Search Procedure	670
16.1.2c.3 Klein's Maximum Likelihood Estimates	671
16.1.2c.4 Bayesian Estimation	672
16.1.2d Assuming That the Original Disturbance e_t Is Autocorrelated	673
16.1.2d.1 Spectral Analysis	673
16.1.2d.2 Two-Step Gauss-Newton Method	674
16.1.2d.3 Dhrymes' Maximum Likelihood Estimates	675
16.1.2d.4 Zellner-Geisel Iterative Procedure	677
16.1.2d.5 Bayesian Estimation	678
16.1.3 Evaluation and Critique	678
16.2 Pascal Lag	681
16.3 Rational Distributed Lag	685
16.3.1 Weighted Least Squares	686
16.3.2 Generalized Least Squares with Jorgenson's Approximation	688
16.3.3 Concluding Remarks	690
16.4 Gamma Distributed Lag	690
16.5 Geometric Polynomial Lag	693
16.6 Exponential Lag	694
16.7 Some Problems in Empirical Applications	696
16.7.1 General Problem of Choosing Lag Distribution and Parameter Restrictions	696
16.7.2 Aggregation Over Time	697
16.7.3 Seasonality	698
16.8 Summary and Concluding Remarks	699
