Biofilms in Wastewater Treatment

An Interdisciplinary Approach

Edited by Stefan Wuertz, Paul L. Bishop and
Peter A. Wilderer

IWA
Publishing

Contents

<i>Preface</i>	viii
<i>About the editors</i>	x
<i>List of contributors</i>	xi
PART ONE: MODELING AND SIMULATION	1
Modeling and simulation: Introduction	3
<i>Stefan Wuerzt and Christina M. Falkentoft</i>	
1 What do biofilm models, mechanical ducks, and artificial life have in common? <i>Mathematical modeling in biofilm research</i>	8
<i>Hermann J. Eberl</i>	
1.1 Mathematics and biology: how do they go together?	9
1.2 What actually are mathematical models and what is mathematical modeling?	10
1.3 How mathematical models can be used to study complicated biofilm architectures	16
1.4 Beyond mathematical models: reductionism and holism, physicalism and vitalism as philosophical concepts in theoretical biology	20
1.5 Interdisciplinarity: why it is difficult to communicate with mathematicians	25
1.6 What do biofilm models, mechanical ducks, and artificial life have in common? (Conclusion)	28
1.7 References	28
2 Biofilm architecture: interplay of models and experiments	32
<i>Slawomir W. Hermanowicz</i>	
2.1 Tools for biofilm studies	32
2.2 Early observations and models	34
2.3 Standard diffusion-reaction model	36
2.4 New experimental techniques	37
2.5 Challenges in modeling	38
2.6 Modeling of structural heterogeneity	41
2.7 Conclusions and future directions	43
2.8 References	45
3 Towards new mathematical models for biofilms	49
<i>Volker Hösel and Volkmär Liebscher</i>	
3.1 Introduction	49
3.2 Strategies of mathematical modeling	50
3.3 Examples of mathematical models	52

3.4	Established biofilm models	54
3.5	Models from mathematical biology	55
3.6	Ideas for stochastic models	56
3.7	Concluding remarks	58
3.8	References	58
4	Beyond models: requirements and chances of computational biofilms	60
	<i>Hans-Joachim Bungartz and Miriam Mehl</i>	
4.1	Introduction: simulating biofilm systems	60
4.2	Mathematical models	64
4.3	Numerical methods	69
4.4	Implementation	78
4.5	Embedding	80
4.6	Visualization: hot air or catalyst?	81
4.7	Validation	83
4.8	Concluding remarks	84
4.9	References	85
5	On the influence of fluid flow in a packed-bed biofilm reactor	88
	<i>Stefan Esterl, Christoph Hartmann and Antonio Delgado</i>	
5.1	Introduction	88
5.2	Some comments on specific topics	97
5.3	Current investigations	101
5.4	Influence of fluid flow and substrate concentration on biofilm architecture	110
5.5	Conclusions and outlook	111
5.6	References	114
	Modeling and simulation: Conclusions	118
	<i>Paul Bishop</i>	
	PART TWO: ARCHITECTURE, POPULATION STRUCTURE AND FUNCTION	121
	Architecture, population structure and function: Introduction	123
	<i>Stefan Wuerzt</i>	
6	The effect of biofilm heterogeneity on metabolic processes	125
	<i>Paul L. Bishop</i>	
6.1	Introduction	125
6.2	Biofilm properties	126
6.3	Confocal laser scanning microscopy	138
6.4	Cell-to-cell communication	139
6.5	Molecular probes	139
6.6	Concluding remarks	141
6.7	References	142

7	Mass transport in heterogeneous biofilms	147
	<i>Zbigniew Lewandowski and Haluk Beyenal</i>	
7.1	Introduction	147
7.2	Biofilm heterogeneity and biofilm models	150
7.3	Quantifying nutrient uptake kinetics from the nutrient concentration profiles	153
7.4	Quantifying mass transport mechanisms from flow velocity profiles in biofilms	156
7.5	Local mass transport rates in heterogeneous biofilms	159
7.6	The concept of biofilms composed of discrete layers	162
7.7	Modeling mass transport and activity in biofilms composed of discrete layers	166
7.8	Experimental validation of the model of biofilms composed of discrete layers	168
7.9	Can discretizing biofilms reflect the effect of biofilm heterogeneity?	169
7.10	Biofilms grown at high flow velocities	171
7.11	Concluding remarks	172
7.12	References	175
8	The crucial role of extracellular polymeric substances in biofilms	178
	<i>Hans-Curt Flemming and Jost Wingender</i>	
8.1	Introduction	178
8.2	Definition of EPS	179
8.3	Composition and properties	182
8.4	Mechanical stability mediated by EPS	187
8.5	Role of EPS in microbial aggregation	188
8.6	Function of EPS	194
8.7	Technical aspects of EPS	197
8.8	Ecological aspects	200
8.9	Outlook	202
8.10	References	203
9	The importance of physicochemical properties in biofilm formation and activity	211
	<i>Rosario Oliveira, Joana Azeredo and Pilar Teixeira</i>	
9.1	Introduction	211
9.2	How adhesion has been predicted	212
9.3	Surface properties relevant for adhesion	218
9.4	Concluding remarks	228
9.5	References	228
10	Influence of population structure on the performance of biofilm reactors	232
	<i>Axel Wobus, Frank Kloep, Kerstin Röske and Isolde Röske</i>	
10.1	Introduction	233
10.2	Investigation of the biotic structure of biofilms: survey of methods	234
10.3	Case studies	240
10.4	Concluding remarks	258
10.5	References	259

11	Detachment: an often-overlooked phenomenon in biofilm research and modeling	264
	<i>Eberhard Morgenroth</i>	
11.1	Introduction	264
11.2	Detachment mechanisms	265
11.3	Influence of detachment on competition in biofilms and overall process performance	276
11.4	Concluding remarks	286
11.5	References	288
	Architecture, population structure and function: Conclusions	291
	<i>Stefan Wuerzt</i>	
	PART THREE: FROM FUNDAMENTALS TO PRACTICAL APPLICATIONS	295
	From fundamentals to practical applications: Introduction	297
	<i>Peter A. Wilderer</i>	
12	Deduction and induction in design and operation of biofilm reactors	299
	<i>Poul Harremoës</i>	
12.1	Introduction	299
12.2	Technological development	300
12.3	Pragmatism versus theory-based models	302
12.4	Models of biofilm reactors	306
12.5	Model calibration and parameter estimation	309
12.6	Treatment plant design	314
12.7	Analysis of existing plant / pilot plant	319
12.8	Outstanding issues of engineering significance	320
12.9	References	323
13	Effect of clay particles on biofilm composition and reactor efficiency	325
	<i>Luis F. Melo and Maria J. Vieira</i>	
13.1	Introduction	325
13.2	Properties of clay particles	326
13.3	Microorganisms in soils and in aqueous solutions: interactions with clays	329
13.4	Microhabitats created by clay particles	331
13.5	Genetic exchange	332
13.6	Effect of particles on the toxicity of biocides	333
13.7	Effects of particles on biofilm physical properties	336
13.8	Clay particles in wastewater treatment bioreactors	337
13.9	Summary and future research	338
13.10	References	340

14	Bioprocess engineering and microbiologists: a profit-sharing alliance	343
	<i>Peter A. Wilderer and Martina Hausner</i>	
14.1	Postulate	343
14.2	Analysis of the current state of biotechnology	345
14.3	Chances and requirements	350
14.4	Concluding remarks	354
14.5	References	355
	Appendix: biography of microbial samples	357
	From fundamentals to practical applications: Conclusions	374
	<i>Peter A. Wilderer</i>	
	Glossary	377
	Index	391
