Remote Sensing: The Quantitative Approach

CONTENTS

Preface ix

Chapter 1 The Quantitative Approach: Concept and Rationale 1
David A. Landgrebe

1-1 Background 2
1-2 How Information Is Conveyed in Remote Sensing Data 3
1-3 Information from Multispectral Data: A Closer Look 10
1-4 A System Plan for the Quantitative Approach 16

Chapter 2 Radiation and Instrumentation in Remote Sensing 21
LeRoy F. Silva

2-1 Radiation and Radiation Sources 23
Solar Radiation 23
Radiation Terminology 24
Blackbody Radiation 27
The Electromagnetic Spectrum 33
2-2 Atmospheric Effects 34
2-3 Reflectance in Remote Sensing 38
Elementary Optics Review 38
Reflectance in General 42
Bidirectional Reflectance Distribution Function (BRDF) 42
Bidirectional Reflectance 44
Reflectance Reciprocity 45
Bidirectional Reflectance Factor (BRF) 45
2-4 General Radiation Instrumentation Principles 52

2-5 Radiation Detectors 55
Photon and Thermal Detectors 55
Photomultipliers 61
2-6 Remote Sensing Instrumentation 62
Spectral Data Systems 63
Multispectral Line Scanners 76
Photographic Systems 94
Electron Imagers 105
2-7 General Characteristics of Data-Acquisition Systems 113
Analog-to-Digital Conversion 113
Data Flow in an Information System 115
Data Calibration 116
Data Flow in a Satellite System 118
Data Flow in an Aircraft System 118
Data Flow in a Field Spectral System 121
2-8 Some Remote Sensing Data-Acquisition Systems 122
The M-7 Airborne Scanner 122
The Landsat Multispectral Scanner 126
The Skylab Multispectral Scanner 129
The Thematic Mapper Scanner 133

Chapter 3 Fundamentals of Pattern Recognition in Remote Sensing 136
Philip H. Swain

3-1 What is a Pattern? 137
3-2 A Geometrical Interpretation of Pattern Recognition; Discriminant Functions 138
3-3 "Training" a Pattern Classifier 142
3-4 The Statistical Approach: Rationale and an Example 145
3-5 Statistical Characterization of Remote Sensing Data 148
3-6 Discriminant Functions Based on Statistical Theory 152
3-7 Evaluating the Classifier: Probability of Error 159
Error Estimation from Training Data 163
Error Estimation from Test Data 163
Indirect Estimates of Classifier Error 164
3-8 Statistical Separability and Feature Selection 164
Divergence 166
J-M Distance 170
3-9 Feature Extraction 174
Subsets 175
Ratios 175
Linear Combinations 176
3-10 Clustering; Unsupervised Analysis 177
Clustering 178
Unsupervised Analysis 184
3-11 Summary: Putting the Pieces Together 185

Chapter 4 Data-Processing Methods and Systems 188
Terry L. Phillips and Philip H. Swain

4-1 A Model of the Data-Processing System 189
4-2 The Output Subsystem 192
4-3 The Input Subsystem 198
4-4 The Analysis Subsystem 207
4-5 The Interactive Subsystem 210
Data Retrieval 211
Analyst/Data Interface 212
Analyst/Data-Processing System Interface 213
Analyst/Results Interface 214
Distributed Access 214
Training of Data Analysts 214
Hardware Considerations 215
4-6 System Evaluation 216

Chapter 5 Biological and Physical Considerations in Applying Computer-Aided Analysis Techniques to Remote Sensor Data 227
Roger M. Hoffer

5-1 Spectral, Temporal, and Spatial Characteristics of the Scene 228
5-2 Spectral Characteristics of Vegetation 231
5-3 Spectral Characterstics of Soil 241
5-4 Spectral Characteristics of Water and Snow 252
5-5 Temporal and Spatial Effects on the Spectral Characteristics of Earth Surface Features 265
5-6 Comparative Interpretation of Remote Sensor Data 273
5-7 Summary and Conclusions 286

Chapter 6 Applying the Quantitative Approach 290
John C. Lindenlaub and Shirley M. Davis

6-1 Key Steps in Carrying Out a Remote Sensing Applications Project 291
6-2 Crop-Indentification and Acreage-Estimation Case Study 294
Stating User Requirements or Objectives 294
Feasibility Study 295
Project Planning 297
Project Implementation 299
Assessment of Results 307
6-3 Sample Applications 308
Example 1: Large Area Land-Use Inventory 309
Example 2: Forest-Cover Mapping in Mountainous Terrain 314
Example 3: Snow-Cover Mapping 321
Example 4: Geologic Mapping 326
Example 5: Water-Temperature Mapping 329
6-4 Conclusion 331

Chapter 7 Useful Information from Multispectral Image Data: Another Look 336
David A. Landgrebe

7-1 A Systems Perspective 337
7-2 The Scene and Its Complexities 339
7-3 The Sensor: Characterization of the Scene by the Data 343
First Research Result: Measurement Complexity 343
Second Research Result: The Effects of Noise 345
Third Research Result: Intrinsic Dimensionality 347
The Parameter List 353
Quantitative Ancillary Data 362
7-4 The Processing System 364
Processing Algorithms 365
Hierarchical Classification 369
Processor Implementation 370
Human Participation in Processing 371
The User Interface 373

Glossary 375

Index 386
