Preface	iii
Table of Contents	v
List of Figures	ix
List of Tables	xiii
List of major symbols and abbreviations/conversion factors	xv
 1. INTRODUCTION	 1
1.1 Classification of Water Distribution Systems	1
1.2 Definition of Localized Irrigation	1
1.3 Brief Historial Development	2
1.4 Example of a Localized Irrigation System	3
1.5 Advantages and Problems of Localized Irrigation	5
1.5.1 Advantages	5
1.5.2 Problems	6
1.6 Conclusions	7
 2. DESIGN PROCEDURE	 9
2.1 Crop Water Requirements	9
2.1.1 Definition	9
2.1.2 Determination of crop water requirements	9
2.2 Crop Water Requirements related to Localized Systems	10
2.2.1 Influence of ground cover	10
2.2.2 Calculation example using Class A pan	12
2.3 Irrigation Water Requirements	12
2.3.1 Definition	12
2.3.2 Irrigation efficiency for localized systems	13
2.3.3 Relationship between irrigation requirements and crop water requirements - conclusion	14
2.4 Peak and Day-to-day Irrigation Requirements	14
2.4.1 Peak irrigation requirement	14
2.4.2 Day-to-day irrigation requirements	17
2.4.3 Example of calculation for PIR	17
2.5 Water Distribution to Plants	17
2.5.1 Water distribution in the soil and wetting pattern	17
2.5.2 Interval between irrigations	24
2.5.3 Duration of each irrigation	27
2.5.4 Discharge per distributor of set of distributors	28
2.5.5 Example	28
2.6 System Capacity	30
2.6.1 System capacity for rotational systems	30
2.6.2 Example	31
2.6.3 System capacity for free week-end operation	31
2.6.4 System capacity of an installation with supply as per demand	31

2.7	Basic Hydraulic Concepts related to Flow Regime	34
2.7.1	The Reynolds number	34
2.7.2	Darcy-Weisbach formula	35
2.7.3	Darcy-Weisbach equation for different flow regimes	36
2.7.4	Hazen-Williams formula	37
2.8	Characteristics of Distributors	38
2.8.1	General	38
2.8.2	Hydraulic characteristics of distributors	39
2.8.3	Manufacturing characteristics of distributors	41
2.9	Irrigation Uniformity and Efficiency	43
2.9.1	General	43
2.9.2	Uniformity parameter	44
2.10	Design of Pipe Networks	45
2.10.1	Layout of pipes	45
2.10.2	Head loss in pipes	45
2.10.3	Laterals	46
2.10.4	Submains	71
2.10.5	Pressure distribution within the pipe network of a system subunit and emission uniformity	72
2.10.6	Mainlines	77
2.10.7	Local head losses in the mainline and submain	77
2.10.8	Water-hammer considerations for pipelines in irrigation systems	77
3.	LOCALIZED IRRIGATION EQUIPMENT	85
3.1	Distributors	85
3.1.1	Long path distributors	85
3.1.2	Orifice distributors	102
3.1.3	Vortex distributors	105
3.1.4	Other types of distributors	105
3.1.5	Conclusions	115
3.2	Pipes	117
3.2.1	Laterals	119
3.2.2	Submains	119
3.2.3	Mainlines	120
3.3	Clogging and Filtration	120
3.3.1	Causes of clogging	120
3.3.2	Prevention of clogging	121
3.4	Fertilizer Applicators	132
3.4.1	Pressure differential system	132
3.4.2	Pump injectors	133
3.5	The Pumping Unit	133
3.5.1	Pump duty	133
3.5.2	Power requirement of the pump and engine	134
3.5.3	Selection of pump and engine	135

3.6	Pressure and Flow Regulations in Pipelines	135
3.7	Typical Control Head	137
3.8	Automation in Localized Irrigation	137
3.8.1	Introduction	137
3.8.2	Automatic sequential systems	139
3.8.3	Non-sequential operated systems	140
4.	INSTALLATION OF A SYSTEM	145
4.1	Distributors	145
4.1.1	Cutting microtubes	145
4.1.2	Inserting distributors into laterals	145
4.2	Connecting Laterals to Submains	151
4.2.1	Polyethylene submains	151
4.2.2	PVC submains	151
4.3	Laterals	151
4.4	Submains	155
4.5	Mainlines	155
4.6	Accessories	155
4.6.1	Valves	155
4.6.2	Tensiometers	155
5.	OPERATION OF A SYSTEM	157
5.1	Initial Operation	157
5.1.1	Flushing	157
5.1.2	Initial wetting	157
5.2	Routine Operation	157
5.2.1	Normal irrigation	157
5.2.2	Backwashing or flushing filters	157
5.2.3	Flushing the lines	158
5.2.4	Precautions against water-hammer	158
5.2.5	Fertilizer application	159
6.	WATER QUALITY	165
6.1	Problems related to Water Quality	165
6.1.1	Salinity	165
6.1.2	Permeability	165
6.1.3	Toxicity	166
6.1.4	Miscellaneous problems	166
6.2	Salts Distribution Patterns	166
6.3	Salinity Management with Localized Systems	171

7.	FIELD EVALUATION	173
7.1	Application Efficiency	173
7.1.1	Emission uniformity	173
7.1.2	Application storage efficiency	174
7.2	Percentage of Wetted Soil	177
7.3	Example of a Field Evaluation	178
APPENDIX I		181
I.A	General	181
I.B	Data Needed for Design of a Localized Irrigation System	182
I.C	Example of Background Data and Detailed Equipment Lists	185
I.D	Example of Data for Preparation of a Contract	189
