Preface page ix

1 **Basic Aerodynamics** 1

 1.1 Introduction 1

 1.2 The Fundamental Problem of Aerodynamics 9

 1.3 Plan for Study of Aerodynamics 12

2 **Physics of Fluids** 15

 2.1 Aerodynamic Forces 15

 2.2 Aerodynamic Variables 22

 2.3 Mathematical Description of Fluid Flows 35

 2.4 Behavior of Gases at Rest: Fluid Statics 39

 2.5 Summary 44

3 **Equations of Aerodynamics** 48

 3.1 Introduction 48

 3.2 Approach 48

 3.3 Physical Laws for Motion of a System 50

 3.4 Physical Laws in Control-Volume Form 54

 3.5 Physical Laws in Differential-Equation Form 80

 3.6 Properties of the Defining Equations 100

 3.7 Boundary Conditions 100

 3.8 Solution Procedures 101

 3.9 Summary 104

4 **Fundamentals of Steady, Incompressible, Inviscid Flows** 110

 4.1 Introduction 110

 4.2 Basic Building Blocks 112

 4.3 Special Solutions of the Conservation Equations 129

 4.4 Solving the Conservation Equations 138

 4.5 Elementary Solutions 141

 4.6 Superposition of Elementary Solutions 150

 4.7 The Kutta–Joukowski Theorem 161

 4.8 The Kutta Condition 162

 4.9 The Starting Vortex: Kelvin’s Theorem 164

 4.10 Summary 165

5 **Two-Dimensional Airfoils** 169

 5.1 Introduction 169

 5.2 The Joukowski Airfoil 173

 5.3 The NACA Series of Airfoils 177

 5.4 Thin-Airfoil Theory 179

 5.5 Thin Airfoil with a Flap 204

 5.6 Distributed Singularity (Panel) Numerical Methods 205

 5.7 Inverse Methods of Solution 212

 5.8 Summary 214

6	Incompressible Flow about Wings of Finite Span.	218
6.1	Introduction	218
6.2	The Biot-Savart Law	223
6.3	Prandtl Lifting-Line Theory	226
6.4	Wing-Panel Methods	252
6.5	Comments on Wing-Analysis Methods	264
6.6	Aerodynamic Strip Theory	264
6.7	Ground Effect	266
6.8	Winglets	268
6.9	Vortex Lift	269
6.10	Strakes and Canards	274
7	Axisymmetric, Incompressible Flow around a Body of Revolution.	281
7.1	Introduction	281
7.2	Axisymmetric Continuity and Momentum Equations	283
7.3	Defining Equation for the Velocity Potential	287
7.4	Defining Equation for the Stream Function	288
7.5	Three-Dimensional Point Source at the Origin of Coordinates	289
7.6	Incompressible Flow around a Sphere	291
7.7	Elementary Solutions for the Stream Function in Axisymmetric Flow	292
7.8	Superposition of Uniform Flow and a Source Flow	294
7.9	Flow Past a Rankine Body	295
7.10	Flow Past a General Body of Revolution	296
7.11	Numerical Methods	298
7.12	Numerical Methods for the Complete Airplane	305
8	Viscous Incompressible Flow	309
8.1	Introduction	309
8.2	Navier-Stokes Equations	312
8.3	Exact Solutions of the Navier-Stokes Equations	321
8.4	Role of the Reynolds Number	325
8.5	The Prandtl Boundary-Layer Equations	328
8.6	Incompressible Boundary-Layer Theory	334
8.7	Results from the Solution of the Blasius Equation	347
8.8	Boundary Layer with a Streamwise Pressure Gradient	353
8.9	Free-Shear Layers, Wakes, and Jets	374
8.10	Transition to Turbulence	376
8.11	Turbulent Flow	380
9	Incompressible Aerodynamics: Summary	393
9.1	Introduction	393
9.2	Prediction of Lift and Drag on a Flight Vehicle	395
9.3	Aircraft-Performance Calculations	405
9.4	Extension to High-Speed Flight	416
	<i>Index</i>	419
