OF THE  
UNITED NATIONS  
Rome, 1984

## CONTENTS

	Page
Acknowledgements	iv
Executive Summary	v
Preface	vii
1. INTRODUCTION	1
1.1 The Problem of Vector-borne Diseases in Water Developments	1
1.2 Environmental Management as a Component of an Integrated Vector Control Strategy	2
1.3 Definitions	2
2. DISEASES, VECTORS AND TRANSMISSION	4
2.1 Malaria	4
2.2 Filariasis	7
2.3 Encephalitis and Other Arboviruses	8
2.4 Schistosomiasis (Bilharziasis)	9
3. VECTOR ECOLOGY AND RICE FIELD ENVIRONMENT	14
3.1 Soils	14
3.2 Water	14
3.3 Vegetation	15
3.4 Climatic Factors	16
3.5 Diversity of Rice Field Environments	17
4. METHODS OF VECTOR-BORNE DISEASE CONTROL	19
4.1 Introduction	19
4.2 Snails - Schistosomiasis	19
4.2.1 Diagnosis and treatment	19
4.2.2 Chemical control of snails (molluscicides)	21
4.2.3 Biological control	21
4.2.4 Environmental design	21
4.2.5 Environmental management	22
4.2.6 Health education	23
4.2.7 Personal protection against infection	23
4.3 Mosquitoes - Malaria, Filariasis, Arboviruses	23
4.3.1 Therapy and prophylaxis	24
4.3.2 Integrated management	24
4.3.3 Chemical control methods	24
4.3.4 Biological control methods	28
4.3.5 Environmental design	31
4.3.6 Environmental management	32
5. RICE PLANT CHARACTERISTICS AND VECTOR CONTROL	33
5.1 Improved Rice Plant Under Irrigation Conditions	33
5.2 Improved Plant Type in Rainfed Shallow Water Conditions	35
5.3 Improved Plant Type for Semi-deep Water Rainfed Conditions	35
5.3.1 Improved plant type for medium deep waterlogged rainfed conditions	35
5.3.2 Rainfed medium deep "mangrove" or tidal swamp conditions	36

	Page	
5.4	Deep Water Rainfed Rice	36
5.5	Other Morphological and Chemical Characteristics	37
6.	RICE CULTIVATION AND VECTOR CONTROL	39
6.1	Land Preparation and Stand Establishment	39
	6.1.1 Wetland tillage and transplanting	39
	6.1.2 Dryland tillage	40
	6.1.3 Minimum or Zero tillage	40
6.2	Water Management and Varietal Improvement	41
	6.2.1 Submergence	41
	6.2.2 Water depth	42
	6.2.3 Drought-tolerant varieties to sustain longer water stress period and reduce submergence period during rice growth	42
6.3	Early Maturing Varieties, Rice Cropping Intensity and "Continuous Rice" ("Garden Rice")	42
6.4	Weed Control	43
6.5	Fertilizers and Pesticides	44
	6.5.1 Chemical fertilizers	44
	6.5.2 Green manure, straw, vegetal residues	45
	6.5.3 Biological fertilizers ( <i>Azolla</i> and blue-green algae)	45
	6.5.4 Pesticides	45
6.6	Specific Types of Land Reclamation	46
	6.6.1 Salt-affected soils	47
	6.6.2 Mangrove rice (mangal soil)	47
7.	ENVIRONMENTAL MANAGEMENT	49
7.1	The Water Body	50
	7.1.1 Effects of environmental changes	50
	7.1.2 Water storage	52
	7.1.3 The irrigation system	55
	7.1.4 The drainage system	63
	7.1.5 Ancillary structures	66
	7.1.6 The rice field and irrigation practices	67
	7.1.7 Marginal water bodies	73
7.2	Vegetation	74
	7.2.1 Aquatic vegetation	75
	7.2.2 Terrestrial vegetation	77
7.3	Settlement, Structures, Services	77
7.4	Social and Economic Issues	80
8.	INSTITUTIONAL AND MANAGEMENT NEEDS	84
8.1	Community Involvement and Acceptance	84
8.2	Intersectoral Collaboration	84
8.3	Planning, Design and Implementation	85
8.4	Evaluation	86
	8.4.1 Operational evaluation	87
	8.4.2 Epidemiological evaluation	87

	Page
8.4.3 Environmental impact assessment	89
8.4.4 Economic impact assessment	91
8.5 Education, Training and Information	91
8.6 Research and Development	93
9. CONCLUSIONS	95
APPENDIX 1 DISCUSSION PAPERS	97
1. Rice Farming and Ecosystems of Paddy Fields in Southeast Asia, by Tomio Yoshida	97
2. Rice Production and Water Management, by Hikaru Tsutsui	106
3. Environmental Management for Vector Control in Rice Fields in the Context of an Integrated Approach, by Lloyd E. Myers	124
4. Effects of Rice Growing on the Population of Disease Vectors, by Pao-Ling Luh	130
5. The Wet Irrigation Method of Mosquito Control in Rice Fields: An Experience in Intermittent Irrigation in China, by Pao-Ling Luh	133
REFERENCES	137
OTHER DOCUMENTS CONSULTED IN PREPARING THE PAPER	144
GLOSSARY	149

## LIST OF TABLES

1. Estimated project costs (rupees) for different service levels	62
2. Effect of intermittent irrigation in four large plots, 2000 m <sup>2</sup> each during four years	69
3. Frequency and duration of contact with water by 558 persons in relation to age and type of activity	82
4. Rice area, production and yield (1978)	108
5. Estimate of paddy seasonal water requirements	115
6. Irrigation water distribution plan as drought preventive measures	120
7. Water stress regimes and yields	120
