Chapter 1

VIBRATIONAL AND ROTATIONAL SPECTRA	1
--	---

1.1 Introduction, 1; 1.2 Photon Energy, 2; 1.3 Degrees of Freedom of Molecular Motion, 3; 1.4 Normal Modes of Vibration, 4; 1.5 Mechanical Molecular Models, 4; 1.6 Coordinates Used to Describe Molecular Vibrations, 6; 1.7 Classical Vibrational Frequency Formula for Diatomic Molecule, 7; 1.8 Infrared Absorption and the Change in Dipole Moment, 11; 1.9 Anharmonicity and Overtones, 15; 1.10 Vibrational Potential Function, 16; 1.11 Introduction to the Quantum Effect, 19; 1.12 The Quantum Mechanical Harmonic Oscillator, 23; 1.13 The Boltzmann Distribution Function, 25; 1.14 Vibrational Transitions and Infrared Absorption, 26; 1.15 The Anharmonic Oscillator, 27; 1.16 Combination and Difference Bands, 30; 1.17 Fermi Resonance, 31; 1.18 Rotation of Linear Molecules, 33; 1.19 Rotational Transitions and Infrared Absorption, 37; 1.20 The Nonrigid Rotator, 41; 1.21 Rotational Line Intensities, 42; 1.22 Types of Rotators, 43; 1.23 Rotation of Symmetric Top Molecules, 45; 1.24 Vibrational-Rotational Spectrum, Classical Picture, 46; 1.25 Vibrational-Rotational Spectrum, Quantum Mechanical Treatment, 48; 1.26 Vibrational-Rotational Spectrum, Nonrigid Rotator, 54; 1.27 Spherical Top Molecules, 56; 1.28 Symmetrical Top Molecules, 56; 1.29 Asymmetrical Top Molecules, 58; 1.30 The Raman Effect, 60; 1.31 Polarizability, 62; 1.32 The Tensor Character of the Polarizability, 65; 1.33 Depolarization Ratio, 68; 1.34 Pure Rotational Raman Spectra, 70; 1.35 Raman Sources, 72

Chapter 2

IR EXPERIMENTAL CONSIDERATIONS	75
--------------------------------------	----

2.1 Source of Infrared Radiation, 75; 2.2 Infrared Detectors, 77; 2.3 Monochromators, 77; 2.4 Interferometers, 80; 2.5 Infrared Transmitting Materials, 83; 2.6 Salt Polishing, 84; 2.7 Infrared Cells, 85; 2.8 Solid Sampling, 87; 2.9 Internal Reflection Spectroscopy, 92; 2.10 Polarized Infrared Radiation, 94; 2.11 Quantitative Analysis, 100

Chapter 3**MOLECULAR SYMMETRY 109**

3.1 Symmetry Properties, 109; 3.2 Point Groups, 115; 3.3 Group Theory, 119; 3.4 Group Theory Applied to Point Groups, 121; 3.5 Representations of Groups, 124; 3.6 Irreducible Representations, 129; 3.7 The Character Table, 131; 3.8 Irreducible Representation Components in a Representation, 136; 3.9 Transformation Properties of a Vector, 138; 3.10 The Number of Fundamentals of Each Type, 139; 3.11 Selection Rules, 141; 3.12 Infrared Activity of Fundamentals, 144; 3.13 Raman Activity of Fundamentals, 145; 3.14 Overtone and Combination Bands, 146; 3.15 Symmetry Coordinates, 150; 3.16 Isotope Effects and the Product Rule, 152; 3.17 Character Tables and Selection Rules, 155

Chapter 4**THE VIBRATIONAL ORIGIN OF GROUP FREQUENCIES 171**

4.1 Introduction, 171; 4.2 Diatomic Oscillators, 172; 4.3 Coupled Oscillators, 172; 4.4 Unsymmetrical Coupled Oscillators, 175; 4.5 X—H Stretching Frequencies, 177; 4.6 Triple Bond Vibrations, 178; 4.7 Cumulated Double Bonds, 180; 4.8 The Linear $M_1-M_2-M_3$ Model, 181; 4.9 $X-C\equiv N$ Compounds, 182; 4.10 Carbonyl and $C=C$ Compounds, 184; 4.11 Cyclic Compound Stretching Vibrations, 188; 4.12 The Bent $M_1-M_2-M_3$ Stretching Frequencies, 192; 4.13 Noncyclic Single Bond Vibrations, 194; 4.14 Bend-Bend Interaction, 196; 4.15 Bend-Stretch Interaction, 202; 4.16 Multiple Oscillator Groups, 207; 4.17 Interaction Force Constant Effects, 208; 4.18 Hydrogen Bonding, 210

Chapter 5**METHYL AND METHYLENE GROUPS 215**

5.1 Introduction to Group Frequencies, 215; 5.2 Methyl Groups, 216; 5.3 CH_3 Stretching Vibrations, 217; 5.4 CH_3 Deformation Vibrations, 222; 5.5 CH_2 Rock Vibrations, 225; 5.6 Methylene Groups, 227; 5.7 CH_2 Stretching Vibrations, 228; 5.8 CH_2 Deformation Vibrations, 228; 5.9 CH_2 Wag Vibrations, 228; 5.10 CH_2 Rock Vibrations, 230; 5.11 CH_2 Twisting Vibrations, 232; 5.12 CH_2 in Cyclic Compounds, 232; 5.13 Carbon Hydrogen Group, 233

Chapter 6**TRIPLE BONDS AND CUMULATED DOUBLE BONDS 235**

6.1 Introduction, 235; 6.2 Monosubstituted Acetylenes, 236; 6.3 Disubstituted Acetylenes, 237; 6.4 Allenes, 238; 6.5 Nitriles, 238; 6.6 Nitrile *N*-Oxides and Complexes, 239; 6.7 Cyanates, 239; 6.8 Isocyanates, 239; 6.9 Thiocyanates, 240; 6.10 Isothiocyanates, 240; 6.11 Nitriles on a Nitrogen Atom, 240; 6.12 Carbodiimides, 241; 6.13 Ketene Imines, 241; 6.14 Diazo Compounds, 241; 6.15 Azides, 243; 6.16 Aryl Diazonium Salts, 243; 6.17 Isocyanides, 244; 6.18 Ketenes, 244; 6.19 Cyanide Ions, 244; 6.20 Cyanate Ions, 245; 6.21 Thiocyanate Ions, 245; 6.22 Metal Carbonyls, 245; 6.23 Three and Four Cumulated Double Bonds, 245

Chapter 7**OLEFIN GROUPS 247**

7.1 Noncyclic Olefins, 247; 7.2 Olefinic Hydrogen Wagging Vibrations, 252; 7.3 Cyclic C=C, 257

Chapter 8**AROMATIC AND HETEROAROMATIC RINGS 261**

8.1 Benzene Rings, 261; 8.2 The Carbon-Carbon Vibrations, 263; 8.3 The 1600 cm^{-1} Region, 264; 8.4 The 1500 cm^{-1} Region, 266; 8.5 The 700 cm^{-1} Region, 267; 8.6 The 900-700 cm^{-1} CH Wag Bands, 268; 8.7 The 2000-1650 cm^{-1} Summation Bands, 275; 8.8 The 1300-1000 cm^{-1} Region, 276; 8.9 The 850-600 cm^{-1} Region, 279; 8.10 The 550-400 cm^{-1} Region, 280; 8.11 Condensed Ring Aromatic Compounds, 281; 8.12 Pyridines, 283; 8.13 Pyridine *N*-Oxides, 283; 8.14 Pyrimidines, 284; 8.15 Triazines, 284; 8.16 Alkyl- or Aryl-Substituted Triazines, 284; 8.17 Melamines and Guanamines, 285; 8.18 Chloro-, Oxy-, and Thio-Substituted Triazines, 285; 8.19 Tetrazines, 286; 8.20 Heteroaromatic Five-Membered Ring Compounds, 286; 8.21 Cyclopentadienyl Ring-Metal Complexes, 288

Chapter 9**CARBONYL COMPOUNDS 289**

9.1 Introduction, 289; 9.2 Mass Effects, 289; 9.3 Bond Angle Effects, 292; 9.4 Inductive Effects, 293; 9.5 Mesomeric Effects, 294; 9.6 Ketones, 295; 9.7 α -Chloro Ketones, 295; 9.8 Conjugated Ketones, 296; 9.9 Conjugated Hydrogen Bonded Ketones, 297; 9.10 Bond Angle Effects in

Ketones, 299; 9.11 Aldehyde CH Vibrations, 300; 9.12 Aldehyde Carbonyl Vibrations, 301; 9.13 Aldehyde C—C, 301; 9.14 Ester C=O, 301; 9.15 Ester C—O, 302; 9.16 Out-of-Plane Hydrogen Vibrations in Unsaturated Esters, 305; 9.17 Groups Next to the Carbonyl in Esters, 306; 9.18 Groups on the Oxygen Atoms in Esters, 307; 9.19 Lactones, 307; 9.20 Thiol Esters and Related Compounds, 308; 9.21 Organic Carbonate Derivatives and Related Compounds, 309; 9.22 Oxalates, 310; 9.23 Anhydrides, 310; 9.24 Peroxides, Acyl or Aroyl, 312; 9.25 Halogen-Substituted Carbonyls, 312; 9.26 Carboxylic Acid OH Stretch, 313; 9.27 Carboxyl—Carbonyl Stretch, 313; 9.28 Carboxyl OH Bending and C—O Stretching, 315; 9.29 Monomeric Acids, 315; 9.30 Aliphatic Peroxy Acids, 316; 9.31 Aromatic Acids, 316; 9.32 Aliphatic Bands in Long Chain *n*-Aliphatic Carboxylic Acids, Ester, and Soaps, 317; 9.33 Carboxyl Salts, 317; 9.34 Amino Acids, 318; 9.35 Amido Acids, 319; 9.36 Unsubstituted Amides, 319; 9.37 *N*-Substituted Amides (*trans*), 320; 9.38 *N*-Substituted Amides (*cis*) (Lactams), 321; 9.39 Disubstituted Amides, 322; 9.40 Ureas, 322; 9.41 Carbamates, 323; 9.42 Hydroxamic Acids, 323; 9.43 Imides, 323; 9.44 Isocyanurates, 324; 9.45 Acid Hydrazides, 325

Chapter 10

ETHERS, ALCOHOLS, AND PHENOLS 327

10.1 Aliphatic Ethers, 327; 10.2 Aromatic Ethers, 328; 10.3 Vinyl Ethers, 329; 10.4 Cyclic Ether Linkages, 331; 10.5 Oxirane Ring Compounds, 331; 10.6 OH Stretch in Alcohols and Phenols, 332; 10.7 C—O Stretch, 333; 10.8 OH Deformation, 334; 10.9 Phenols, 334; 10.10 Noncyclic Acetals and Related Compounds, 335; 10.11 Cyclic Acetals, 335; 10.12 Carbohydrates, 335; 10.13 Peroxides, 336

Chapter 11

AMINES, C=N, AND N=O COMPOUNDS 339

11.1 NH₂ Stretch in Amines, 339; 11.2 NH₂ Deformation in Amines, 340; 11.3 NH₂, 340; 11.4 C—N in Aliphatic Amines, 341; 11.5 C—N in Aromatic Amines, 341; 11.6 Aliphatic Bands in Amines, 342; 11.7 The Ammonium Ion, 343; 11.8 Amine Salts, 343; 11.9 C=N Groups, 344; 11.10 Nitro Group, 346; 11.11 Organic Nitrates, 349; 11.12 Nitramines, 349; 11.13 Organic Nitrates, 350; 11.14 Inorganic Nitrates and Nitrites, 350; 11.15 N=N Azo, 350; 11.16 Azoxy and Azothio Groups, 352; 11.17 C-Nitroso Compounds, 353; 11.18 Nitrosamines, 354

Chapter 12

**COMPOUNDS CONTAINING BORON, SILICON,
PHOSPHORUS, SULFUR, OR HALOGEN 355**

12.1 Boron Compounds, 355; 12.2 B—O, 355; 12.3 B—OH, 356; 12.4 B—N, 356; 12.5 B—H, 357; 12.6 B—Cl, 357; 12.7 B—CH₃, 358; 12.8 B—Phenyl, 358; 12.9 Silicon Compounds, 358; 12.10 Si—H, 359; 12.11 Si—CH₃, 360; 12.12 Si—CH₂—R, 360; 12.13 Si—C₂H₅, 360; 12.14 Si—CH=CH₂, 360; 12.15 Si—O—R, 361; 12.16 Si—O—C₂H₅, 361; 12.17 Si—O—Si, 361; 12.18 Si—OH, 361; 12.19 Si—Halogen, 362; 12.20 Si—N, 362; 12.21 Phosphorus Compounds, 362; 12.22 P—H, 363; 12.23 P=O, 364; 12.24 P—OH, 365; 12.25 P—O—P, 365; 12.26 PO₂⁻, PO₃²⁻, PO₄³⁻, 366; 12.27 P—O—C (Aliphatic), 366; 12.28 P—O—C (Phenyl), 367; 12.29 P—CH₃, 367; 12.30 P—CH₂, 367; 12.31 P—Phenyl, 367; 12.32 P=S, 368; 12.33 P—SH, 370; 12.34 P—N, 370; 12.35 P=N, 370; 12.36 P—F, P—Cl, P—C, 371; 12.37 S—H, 371; 12.38 Sulfides and Disulfides, 371; 12.39 CH₃—S, 372; 12.40 CH₂—S, 372; 12.41 S—CH=CH₂, 372; 12.42 S—Aryl, 373; 12.43 S—F, 373; 12.44 SO, 373; 12.45 SO₂, 373; 12.46 Sulfones, 374; 12.47 Sulfonamides, 375; 12.48 Sulfonic Acids, 375; 12.49 Sulfonic Acid Salts, 375; 12.50 Sulfinic Acids, 375; 12.51 HSO₃⁻, 376; 12.52 SO₃²⁻, 376; 12.53 SO₃²⁻, 376; 12.54 S—O—CH₃, 376; 12.55 Thionylamine, 376; 12.56 C=S, 377; 12.57 (FHF)⁻, 379; 12.58 FCH, 379; 12.59 FC=C, 380; 12.60 FC=O, 380; 12.61 F—Aryl, 380; 12.62 CF Stretch, 380; 12.63 C—Cl, 381; 12.64 C—Br, 383; 12.65 C—I, 385; 12.66 Aryl Halides, 383; 12.67 Organometallic Compounds, 384; 12.68 Inorganic Metal Oxides, 385

Chapter 13

**MAJOR SPECTRA-STRUCTURE
CORRELATIONS BY SPECTRAL REGIONS 387**

13.1 Introduction, 387; 13.2 3700–3100 cm⁻¹ (OH, NH, and ≡CH), 387; 13.3 3100–2980 cm⁻¹ (Aryl, Olefinic, and Three-Membered Ring CH), 388; 13.4 3000–2700 cm⁻¹ (Aliphatic CH), 388; 13.5 3100–2400 cm⁻¹ (Acidic and Strongly Bonded Hydrogens), 389; 13.6 2600–2100 cm⁻¹ (SH, BH, PH, and SiH), 389; 13.7 2300–1900 cm⁻¹ (X≡Y and X=Y=Z), 389; 13.8 2000–1700 cm⁻¹ (Aryl and Olefinic Overtones), 389; 13.9 1900–1550 cm⁻¹ (C=O), 390; 13.10 1700–1550 cm⁻¹ (C=C and C=N), 390; 13.11 1600–1450 cm⁻¹ (N=O), 390; 13.12 1660–1500 cm⁻¹ (NH₂, NH₃⁺, and CNH), 391; 13.13 1620–1420 cm⁻¹ (Aromatic and Heteroaromatic Rings), 391; 13.14 1500–1250 cm⁻¹ (CH₂ and CH₃), 391; 13.15 1470–1310 cm⁻¹ (B—O, B—N, NO₂⁻, CO₃²⁻, and NH₄⁺), 391; 13.16 1400–1000 cm⁻¹ (SO₂, SO₃²⁻, SO, and SO₃²⁻), 392; 13.17 1300–1140 cm⁻¹ (P=O), 392; 13.18 1350–1120 cm⁻¹ (CF, and CF₂), 392; 13.19 1350–1150 cm⁻¹ (CH₂ and CH Wag), 392; 13.20 1300–1000 cm⁻¹ (C—O), 392; 13.21 1100–830 cm⁻¹ (Si—O and P—O), 393; 13.22 1000–600 cm⁻¹ (Olefinic and Acetylenic CH-Wag), 393; 13.23 900–700 cm⁻¹ (Aromatic CH Wag), 393; 13.24 830–500 cm⁻¹ (CCl, CBr, and Cl),

393; 13.25 900–500 cm^{-1} (OH, NH, and NH, Wag), 393; 13.26 800–200 cm^{-1} (Selected Inorganic Absorptions), 394; 13.27 Mixtures, 394; 13.28 Correlation charts, 395; 13.29 Selected Infrared Spectra Illustrating Functional Group Frequencies, 398; 13.30 Selected Raman Spectra, 478

Chapter 14

THE THEORETICAL ANALYSIS OF MOLECULAR VIBRATIONS 483

14.1 Normal Modes of Vibration, 483; 14.2 The Linear Triatomic Model's Stretching Frequencies, 486; 14.3 Internal Coordinates, 490; 14.4 Vibrational Solution Using Internal Coordinates, 491; 14.5 The G Matrix, 493; 14.6 The L Matrix, 497; 14.7 Normal Coordinates, 498; 14.8 Potential Energy Distribution, 500; 14.9 The Form of the Normal Coordinates, 501; 14.10 Symmetry Coordinates, 502; 14.11 The CHCl_3 Molecule, 505; 14.12 The Internal Coordinates for CHCl_3 , 508; 14.13 The Symmetry Coordinates for CHCl_3 , 509; 14.14 The G Matrix for CHCl_3 , 518; 14.15 The F Matrix for CHCl_3 , 526; 14.16 The Secular Determinants for CHCl_3 , 528; 14.17 The Frequencies of the CDCl_3 Molecules, 529; 14.18 Comparison of Experimental and Calculated Wavenumbers, 530; 14.19 The Form of the Chloroform Normal Coordinates, 530; 14.20 The Potential Function Problem, 535; 14.21 A Review of Matrix Notation, 536; 14.22 The Normal Coordinate Problem in Matrix Form, 539
