

PAUL MADDEN

Concavity and Optimization
in Microeconomics

Basil Blackwell

Contents

Preface	xi
1 Convex sets	1
1.1 Introduction	1
1.2 Subsets of R	1
1.3 Convex subsets of R	3
1.4 Subsets of R^n	5
1.5 Convex subsets of R^n	7
1.6 Hyperplanes	8
Exercise 1	10
2 Concave functions of one variable on R	11
2.1 Introduction	11
2.2 Concave functions of one variable on R	15
2.3 Alternative definitions of concavity; the first derivative characterization	18
2.4 The second derivative characterization	22
2.5 Convex functions of one variable on R	24
2.6 Hypographs and epigraphs: another characterization	25
2.7 Contours and upper and lower contour sets	27
2.8 Strict concavity and convexity	29
Exercise 2	32
3 Maxima of functions of one variable on R	34
3.1 Introduction	34
3.2 Characterizing global maxima	35
3.3 Global minima	37
3.4 The number of global maxima	37
Exercise 3	40
4 Concave functions of n variables on R^n	41
4.1 Introduction	41
4.2 Concave functions of n variables on R^n	46
4.3 Contours of concave functions	50
4.4 A proof of theorems 4.2 and 4.3	52
4.5 Definite matrices: a brief introduction	55
Exercise 4	58

5	Introduction to concave programming: Lagrange and Kuhn-Tucker	60
5.1	Introduction	60
5.2	Concave programming on R with one constraint	62
5.3	Unique solutions	68
5.4	Minimization problems	70
5.5	Interpreting Lagrangeans	73
	Exercise 5	74
6	Concave programming with one constraint	75
6.1	Introduction	75
6.2	The Kuhn-Tucker characterization	75
6.3	Minimization problems	81
6.4	Proof of ‘only if’ in theorem 6.1	82
6.5	Proof of theorem 6.2(a)	84
	Exercise 6	85
7	Concave functions on convex domains	86
7.1	Introduction	86
7.2	Open, convex domains	87
7.3	Convex, non-open domains	93
7.4	Local maxima and minima	95
	Exercise 7	100
8	Parameterized concave programming and the envelope theorem	101
8.1	Introduction	101
8.2	Parameterized families of concave programming problems	102
8.3	The envelope theorem	105
8.4	Perturbation functions and Lagrange multipliers	107
8.5	The source of the envelope	110
	Exercise 8	112
9	Homogeneous functions	114
9.1	Introduction	114
9.2	Homogeneous functions of one variable	115
9.3	Homogeneous functions of many variables	116
9.4	The Cobb-Douglas functions	120
9.5	The C.E.S. function	123
9.6	Proof of theorem 9.5	126
	Exercise 9	127
10	Theory of the firm	129
10.1	Introduction	129
10.2	The production function	130
10.3	The profit maximization problem	133
10.4	Output supply, input demand and profit functions	135
10.5	The classical approach to comparative statics	143
	Exercise 10	148

11	Cost minimization	150
11.1	Introduction	150
11.2	The cost minimization problem	151
11.3	Cost curves	158
11.4	Relation between profit maximization and cost minimization	160
11.5	Interior solutions in the theory of the firm	163
11.6	Inverse functions: an introduction	164
	Exercise 11	166
12	Consumer theory	169
12.1	Introduction	169
12.2	Assumptions on utility functions	170
12.3	The expenditure minimization problem	172
12.4	The utility maximization problem	175
12.5	Relations between utility maximization and expenditure minimization	180
12.6	The Slutsky equation	184
12.7	Income effects and inferior goods	185
12.8	Substitution effects, total effects and Giffen goods	187
12.9	Interior solutions in consumer theory	189
	Exercise 12	189
13	Quasi-concavity	193
13.1	Introduction	193
13.2	Quasi-concave functions	193
13.3	Composition results for concave functions	202
13.4	Composition results for quasi-concave functions	202
13.5	Concavity and quasi-concavity of Cobb-Douglas and C.E.S. functions	205
13.6	Strict quasi-concavity	208
13.7	Compositions of strictly concave and strictly quasi-concave functions	209
13.8	Proof of theorem 13.2	210
13.9	Proof of theorem 13.13	212
	Exercise 13	212
14	More on quasi-concavity	214
14.1	Introduction	214
14.2	First derivative characterization of non-stationary, quasi-concave functions	214
14.3	Quasi-concave programming	216
14.4	Second derivatives and quasi-concavity	220
14.5	Proof of theorem 14.2	225
14.6	Proof of 'only if' in theorem 14.3	225
14.7	Proof of lemma 14.1	228
14.8	Proof of theorem 14.5	229
	Exercise 14	231

15	Quasi-concavity in the theories of the consumer and firm	232
15.1	Introduction	232
15.2	Quasi-concavity in the theory of the consumer	232
15.3	Quasi-concavity in the theory of the firm	235
15.4	Homothetic functions	240
15.5	Homothetic production functions and the cost minimizing firm	241
	Exercise 15	243
16	Closed and open sets and supporting hyperplanes	245
16.1	Introduction	245
16.2	Closed and open sets in R	245
16.3	Closed and open sets in R^n	247
16.4	Support hyperplanes	250
	Exercise 16	251
17	Existence and differentiability of solutions to programming problems	252
17.1	Introduction	252
17.2	Existence of solutions	252
17.3	Differentiability of solutions	254
17.4	The utility maximization problem	256
17.5	The expenditure minimization and cost minimization problems	258
17.6	The profit maximization problem	259
17.7	The implicit function theorem: a brief introduction	261
	Exercise 17	262
18	Introduction to duality theory	264
18.1	Introduction	264
18.2	Duality in the theory of the firm	265
18.3	Duality in the theory of the consumer	269
	Exercise 18	273
19	Multiple constraint concave programming and linear programming	275
19.1	Introduction	275
19.2	Multiple constraint concave programming	275
19.3	The profit maximizing firm revisited	279
19.4	Subgradients and Lagrange multipliers as shadow values	281
19.5	Linear programming	285
19.6	Saddlepoints and duality	289
	Exercise 19	291
20	Concavifiability and quasi-concave programming with multiple constraints	295
20.1	Introduction	295
20.2	Concavifiability and multiple-constraint quasi-concave programming	295

x *Contents*

20.3	Conditions for concavifiability	298
20.4	Applications to consumer theory	299
	Exercise 20	302
	Bibliographical notes	303
	References	307
	Index	310
