<b>Chapter 1 Introduction</b>	<b>1</b>
1.1 What is a Furnace?	3
1.1.1 Furnace Outline	4
1.1.2 Furnace Classification	5
1.1.3 Principle Objectives of Furnace Designers and Operators	5
1.2 Where are Furnaces Used? Brief Review of Current Furnace Applications and Technology	7
1.2.1 Ceramics, Brick Making and Pottery	7
1.2.2 Cement and Lime	8
1.2.3 Glass Making	11
1.2.4 Metal Ore Smelting	13
1.2.5 Metal Refining	16
1.2.6 Flash and Fluid Bed Furnaces	18
1.2.7 Metal Physical Processing	20
1.2.8 Incinerators and Resource Recovery Furnaces	24
1.2.9 Furnaces with Reducing Atmospheres	25
1.2.10 Oil Refining and Petrochemical Furnaces	26
1.3 Drivers for Improved Efficiency	28
1.4 Concluding Remarks	29
References	30
<b>Chapter 2 The Combustion Process</b>	<b>31</b>
2.1 Simple Combustion Chemistry	32
2.1.1 The Complete Oxidation of Carbon	32
2.1.2 The Complete Oxidation of Hydrogen	32
2.1.3 The Incomplete Oxidation of Carbon	33
2.1.4 The Oxidation of Carbon Monoxide	33
2.2 Combustion Calculations	33

## vi Contents

2.3	Chemical Reaction Kinetics	37
2.3.1	Types of Reactions	38
2.3.2	Reaction Rate Theory	38
2.3.3	Reaction Rate Behaviour	41
2.3.4	Burning Droplets and Particles	43
2.4	The Physics of Combustion	47
2.4.1	The Role of Primary Air	50
2.4.2	The Role of Swirl Flows	57
2.4.3	Turbulence in Jets	57
2.4.4	Secondary Flow Aerodynamics	59
2.4.5	Effect of Excess Air on Fuel Consumption	61
2.4.6	Multiple Burner Installations	62
	Nomenclature	63
	References	64
<b>Chapter 3</b>	<b>Fuels for Furnaces</b>	<b>67</b>
3.1	Gaseous Fuels	69
3.1.1	Properties of Natural Gas	69
3.1.2	Manufactured Gas	69
3.1.3	Wobbe Number or Index	71
3.1.4	Flammability Limits	72
3.1.5	Flame Radiation from Gaseous Fuels	75
3.2	Liquid Fuels	75
3.3	Solid Fuels	77
3.3.1	Ash	79
3.4	Waste Fuels	79
3.5	Choice of Fuel	80
3.5.1	Furnace Performance	81
3.6	Safety	85
3.7	Emissions	86
	Nomenclature	86
	References	86
<b>Chapter 4</b>	<b>An Introduction to Heat Transfer in Furnaces</b>	<b>89</b>
4.1	Conduction	90
4.1.1	Steady State Conduction	91
4.1.2	Transient Conduction	92
4.2	Convection	99
4.2.1	Dimensional Analysis	100
4.2.2	Application to Convective Heat Transfer	101
4.2.3	Evaluating Convective Heat Transfer Coefficients	103
4.2.4	High Temperature Convective Heat Transfer	107
4.3	Radiation	112
4.3.1	Physical Basics of Radiative Exchange	113
4.3.2	Emissivity and Absorptivity	116

4.3.3	View Factors	120
4.3.4	Mean Beam Length	125
4.4	Electrical Heating	126
4.4.1	Resistance Heating	126
4.4.2	Arc Heating	128
4.4.3	Induction Heating	129
4.4.4	Dielectric Heating	130
4.4.5	Infra-red Heating	131
	Nomenclature	131
	References	138
<b>Chapter 5 Flames and Burners for Furnaces</b>		<b>139</b>
5.1	Types of Flame	140
5.1.1	Premixed Flames	141
5.1.2	Turbulent Jet Diffusion Flames	143
5.1.3	Heterogenous Combustion	144
5.2	Function of a Burner and Basics of Burner Design	149
5.2.1	The Essential Importance of Heat Flux Profiles	151
5.2.2	Flame Stabilisation	152
5.3	Gas Burners	155
5.3.1	Premixed Burners	155
5.3.2	Turbulent Jet Diffusion Burners	162
5.3.3	Precessing Jet Diffusion Burners	165
5.3.4	Gas Nozzle Design	166
5.4	Oil Burners	170
5.4.1	Turndown	173
5.4.2	Atomisers	173
5.5	Pulverised Coal Burners	180
5.6	Furnace Aerodynamics	182
5.6.1	Single Burner Systems	185
5.6.2	Multiple Burner Systems	188
5.6.3	Combustion Air Duct Design	188
5.6.4	Common Windbox and Plenum Design	191
5.7	Combustion System Scaling	193
5.7.1	Example of Combustion System Scaling	194
5.8	Furnace Noise	196
5.8.1	Combustion Roar	198
5.8.2	Nozzle and Turbulent Jet Noise	198
5.8.3	Fan Noise	199
5.8.4	Pipe and Valve Noise	199
5.8.5	Furnace Noise Attenuation	200
5.8.6	Combustion Driven Oscillations	201
	Nomenclature	204
	References	206

<b>Chapter 6</b>	<b>Combustion and Heat Transfer Modelling</b>	<b>209</b>
6.1	Physical Modelling	211
6.1.1	Thring-Newby Parameter	214
6.1.2	Craya-Curtet Parameter	214
6.1.3	Becker Throttle Factor	214
6.1.4	Curtet Number	215
6.1.5	Relationship Between Scaling Parameters	215
6.1.6	Determining the Required Model Flows	216
6.1.7	Applying the Scaling Parameter	216
6.1.8	Applying a Post Measurement Correction	216
6.2	Mathematical Modelling	217
6.2.1	Simple Well Stirred Furnace Models	218
6.2.2	Long Furnace Models	226
6.2.3	Two and Three Dimensional Zone Models	228
6.2.4	Computational Fluid Dynamics Models	232
6.2.5	Particle Drag in Combustion System	238
6.3	Application of Modelling to Furnace Design	238
	Nomenclature	239
	References	241
<b>Chapter 7</b>	<b>Fuel Handling Systems</b>	<b>245</b>
7.1	Gas Valve Trains	246
7.1.1	Safety Shutoff Systems	248
7.2	Fuel Oil Handling Systems	249
7.2.1	Storage, Pumping and Heating	249
7.2.2	Oil Valve Trains	252
7.3	Pulverised Coal Handling and Firing Systems	253
7.3.1	Raw Coal Bunkers and Feeders	254
7.3.2	Coal Grinding and Drying	256
7.3.3	Coal Mills	257
7.3.4	Coal Mill Grinding Capacity	263
7.3.5	Pulverised Coal Grinding and Firing Systems	265
7.3.6	Coal System Drying Capacity	269
7.3.7	Coal Firing System Fans	273
7.3.8	Fine Coal Storage	274
7.3.9	Fine Coal Feeding and Conveying	277
7.3.10	Pulverised Coal Conveying	279
7.4	Waste Fuel Handling	283
7.4.1	Waste Gas Fuel Handling	283
7.4.2	Waste Liquid Fuel Handling	284
7.4.3	Solids Waste Fuel Handling	284
7.4.4	Environmental Benefits and Health Hazards of Waste Fuel Utilisation	286
	Nomenclature	287
	References	287

<b>Chapter 8</b>	<b>Furnace Control and Safety</b>	<b>289</b>
8.1	Process Control	290
8.1.1	Basic Furnace Control Strategies	291
8.2	Furnace Instrumentation	292
8.2.1	Temperature Measurement	292
8.2.2	Heat Input Measurement	296
8.2.3	Determination of Excess Air	299
8.3	Flue Gas Analysis	302
8.3.1	Extractive Gas Sampling Systems and Analysers	302
8.3.2	In-Situ Systems	309
8.4	Combustion Control	313
8.5	Ensuring Furnace Safety	315
8.5.1	Risk Factors in Furnace Operation	315
8.5.2	Furnace Start-up	317
8.5.3	Operation with Insufficient Combustion Air	320
8.5.4	Flame Quenching	321
8.5.5	Eliminating Ignition Sources	321
8.6	Burner Management Systems	321
8.6.1	Safety Requirements for Burner Management Systems	322
8.6.2	False Trips	324
8.6.3	Achieving Acceptable Safety Standards with Programmable Logic Controller Burner Management Systems	324
8.6.4	Choosing an Appropriate Safety Integrity Level	326
8.6.5	Determining the Safety Integrity Level of the BMS System	327
8.6.6	Flame Detectors	330
	Nomenclature	333
	References	334
<b>Chapter 9</b>	<b>Furnace Efficiency</b>	<b>337</b>
9.1	Furnace Performance Charts	340
9.2	Mass and Energy Balances	343
9.2.1	On-site Measurement	344
9.2.2	Constructing Mass and Energy Balances	348
9.3	Energy Conversion	360
9.3.1	Low and High Grade Heat	362
9.3.2	Exergy and Pinch Point Analysis	364
9.4	Heat Recovery Equipment	365
9.4.1	Recuperative Heat Exchangers	366
9.4.2	Regenerative Heat Exchangers	368
9.4.3	General Heat Exchanger Design Procedure	368
9.5	Identifying Efficiency Improvements	371
	Nomenclature	374
	References	375

<b>Chapter 10 Emissions and Environmental Impact</b>	<b>377</b>
10.1 Formation of Carbon Monoxide	379
10.2 Formation of Nitrogen Oxides	380
10.2.1 Thermal NO <sub>x</sub> Formation	381
10.2.2 Fuel NO <sub>x</sub> Formation	382
10.2.3 Prompt NO <sub>x</sub> Formation	384
10.2.4 NO <sub>x</sub> Modelling	386
10.3 Formation of Sulphur Oxides	386
10.4 Formation of Intermediate Combustion Products	387
10.4.1 Volatile Organic Compounds (VOCs)	387
10.4.2 Polycyclic Aromatic Hydrocarbons (PAH)	388
10.4.3 PCBs, Dioxins and Furans	388
10.5 Particulate Emissions	391
10.5.1 Formation of Soot	392
10.5.2 Formation and Composition of Fuel Ash	394
10.5.3 Non-combustible Volatile Cycles	396
10.6 Environmental Control of Emissions	398
10.6.1 Prevention and Abatement of Emissions	398
10.6.2 Dispersion Modelling	409
References	411
<b>Chapter 11 Furnace Construction and Materials</b>	<b>415</b>
11.1 Basic Performance Requirements of the Furnace Structure	416
11.2 Basic Construction Methods	417
11.2.1 Brick Lining	419
11.2.2 Monolithic Linings	422
11.2.3 Furnace Steelwork	427
11.2.4 Furnace Roof Construction	429
11.2.5 Furnace Cooling Systems	431
11.3 Practical Engineering Considerations in the Use of Refractories	433
11.4 Ceramic Refractory Materials	435
11.4.1 Testing of Refractories	436
11.4.2 Properties and Uses of Refractories	437
11.5 Heat Resisting and Refractory metals	440
11.5.1 Effect of Elevated Temperature on Metal Properties	441
11.5.2 High Temperature Alloys	442
11.6 Practical Engineering Considerations in the Use of High Temperature Metals	445
11.7 Concluding Remarks	447
References	447
<b>Chapter 12 Furnace Design Methods</b>	<b>457</b>
12.1 Introduction	458
12.1.1 Design Constraints	460
12.1.2 Cost of Design Changes	461

12.2	Conceptual Design	462
12.2.1	Process Functions	464
12.2.2	Defining the Physical and Chemical Changes	466
12.2.3	Preliminary Mass and Energy Balances	468
12.2.4	Reliability of Available Process Knowledge	468
12.2.5	Effect of Upstream and Downstream Processes	470
12.2.6	Fuel Choice	472
12.2.7	Potential for Heat Recovery and Choice of Equipment	476
12.3	Furnace Sizing	481
12.4	Burner Selection	498
12.5	Detailed Analysis and Validation of the Furnace Design	501
12.6	Furnace Instrumentation and Controls	503
	Nomenclature	505
	References	506
<b>Chapter 13 Economic Evaluation</b>		<b>507</b>
13.1	Cost Accounting	508
13.2	Distinction Between Capital and Revenue	509
13.2.1	Fixed and Variable Costs	510
13.2.2	Capital Costs	510
13.3	Profit and Profitability	511
13.4	Financial Ratios	511
13.5	Project Costing	514
13.5.1	Order of Magnitude Costing	514
13.5.2	Study Costing	515
13.6	Investment Evaluation	517
13.7	Determining Financial Benefits	518
13.7.1	Base Case Costing	525
13.7.2	Case 1 Costing – Re-Brick with No Insulation	527
13.7.3	Case 2 Costing – Conversion to Natural Gas	527
13.7.4	Case 3 Costing – Conversion to Natural Gas with New Calcium Silicate Lining	528
13.7.5	Case 4 Costing – Reinstate Stack Recuperators	529
13.7.6	Case 5 Costing – Conversion to Blast Furnace Gas with Stack Recuperators	529
13.7.7	Case 6 Costing – Installation of Self-Recuperative Burners	531
13.7.8	Case 7 Costing – Oxygen Enrichment	531
13.7.9	Cost-Benefit Analysis	532
13.8	Post Project Analysis	536
	References	536
<b>Chapter 14 Selected Examples of Real Furnace Applications</b>		<b>537</b>
14.1	Design of a New Burner for a Lime Sludge Kiln	538
14.1.1	The Lime Regeneration Process	539

## **xii** Contents

14.1.2	Design Objectives for the Multi-Fuel Burner	541
14.1.3	Design Methodology	542
14.1.4	Commissioning	546
14.2	Optimising Flash Furnace Design	547
14.2.1	Site Investigation	548
14.2.2	Physical Modelling	552
14.2.3	Mathematical Modelling	553
14.3	Contribution to the Design of a New Reforming Process for Fuel Cell Applications	556
14.3.1	Reformers for Fuel Cells	558
14.3.2	Burner Design	560
14.3.3	Physical and Mathematical Modelling	562
14.3.4	Full Size Testing	567
14.3.5	Concluding Remarks	570
14.4	Resolving Tube Internal Coking and Premature Tube Failure in a Refinery Heater	571
14.4.1	Diagnostic Modelling	573
14.4.2	Correcting the Poor Air Distribution	576
14.4.3	Burner Modifications	578
14.5	Unsuccessful Attempts to Resolve Severe Problems with a Preheater Cement Kiln	580
14.5.1	Cement Manufacture by the Dry Process	580
14.5.2	Diagnosis of the Problem	583
14.5.3	Attempted Resolution of the Problem	591
14.5.4	Concluding Remarks	593
14.6	Investigation and Elimination of Coal Firing System Problems	595
14.6.1	A flawed and Dangerous Coal Firing System	596
14.6.2	Reducing Fuel Consumption and Increasing Output by an Upgrade of a Poorly Performing Coal Firing System	599
14.7	Concluding Remarks on Implementation	605
	References	605
<b>Chapter 15 Future Trends and Concluding Remarks</b>		<b>607</b>
15.1	Trends in New Materials	608
15.2	Trends in Furnace Emissions and Fuels for Furnaces	609
15.2.1	Carbon Capture and Storage	610
15.3	Prospects for Alternative Electrical Energy as a Power Source	619
15.4	Trends in Furnace Controls	620
15.5	New Applications for Furnaces	621
15.6	Concluding Remarks	621
	References	622
<i>Index</i>		625
