The Global Race in Microelectronics

Innovation and Corporate Strategies
in a Period of Crisis

Foreword by David Noble

Campus Verlag · Frankfurt

TABLE OF CONTENTS

<u>Foreword</u> by David Noble, MIT, Cambridge, Mass. ...	11
<u>Acknowledgements</u>	15
<u>The Global Race in Microelectronics - An Outline of the Study</u>	17
1. THE CRISIS OF SEMICONDUCTOR MANUFACTURING - FROM THE CHIP SHORTAGE OF 1979 TO DEMAND STAGNATION AND PROFIT SQUEEZE	25
1.1. An Industry Highly Vulnerable to the Economic Crisis	25
1.1.1. The Myth of a Crisis-Resistant Industry	25
1.1.2. The Semiconductor Crisis Cycle - A Simplified Model	26
1.2. The Chip Shortage of 1979	27
1.2.1. Monopsonistic Trends on Open Semiconductor Markets	27
1.2.2. The Dramatically Rising Fixed Capital Requirements	28
1.2.3. Insufficient and Declining Profitability and Problems to Find Investment Capital	28
1.3. Demand Stagnation and Profit Squeeze - Some Underlying Factors	29
1.3.1. Some Basic Facts	29
1.3.2. Factors Conditioning Excess Capacities	30
1.3.3. Causes Underlying the Increasing Cost Burden	31
1.3.4. The Impact on Chip Demand	32
1.3.5. Potential Future Growth Areas for Applications	33
1.3.6. Crisis and Corporate Strategy - the Case of Texas Instruments	33

1.4.	Perspectives for the Future	34
1.4.1.	Conflicting Projections	34
1.4.2.	A Ferocious Price War	36
1.4.3.	Recent Trends in the Memory Market	37
1.4.4.	The Forthcoming Rounds of the Semiconductor War - Changing Starting Positions of Major Competitors	37
2.	INNOVATION AND THE CHANGING ECONOMICS OF SEMICONDUCTOR MANUFACTURING	39
2.1.	Innovation, Structural Transformation and Inter- national Location - the Context	39
2.2.	Trends in Electronics Technology	39
2.2.1.	Relevance and Criteria of Selection	39
2.2.2.	A New Type of Market Segmentation and the Emergence of New Technological Sub-branches ..	45
2.2.3.	The Custom Chips Bottleneck	48
2.2.4.	Trends in Circuit Design	49
	(a) Constraints inherent to the conventional design approach	49
	(b) Gate array technology	50
2.2.5.	Recent Developments in Production Technol- ogy	53
	(a) Conditioning factors and major areas of change	53
	(b) Changes in lithographic techniques	54
	(c) New processes for wafer fabrication	55
	(d) The proliferation of automation	56
	(e) The transition towards automated assembly ..	57
	(f) Changes of manufacturing technology in application areas	58
2.2.6.	The Increasing Importance of Application Technology	59
	(a) Options for increasing application ori- entation	59
	(b) The convergence between circuit and system design - the pressure to increase technical and industrial synergism	59
2.3.	The Changing Economics of Semiconductor Manu- facturing	60
2.3.1.	Significant Changes in the Overall Cost Struc- ture	60
2.3.2.	Changing Skill Requirements	61
2.3.3.	The Dramatic Increase in the Costs of Market Entrance	63
2.3.4.	Factors Underlying the Increasing Cost Burden of Semiconductor Manufacturing	64

(a)	The decreasing importance of basic re- search and the increasing weight of design and mask making	64
(b)	The increasing importance of firmware	64
(c)	Rising budget requirements for circuit development	64
(d)	The expansion of new and rigid forms of a technological protectionism	65
(e)	The soaring costs of equipment used to make semiconductors	67
3.	THE SOFTWARE SECTOR - CONDITIONING FACTORS AND POSSIBLE FUTURE TRENDS	71
3.1.	The Concept of Software and Some Major Issues	71
3.2.	The Emergence of a Separate Software Sector	73
3.2.1.	The Origins	73
3.2.2.	Conditioning Factors	74
3.3.	Trends in the Market Structure	76
3.3.1.	Software - A Part of Computer Services	76
3.3.2.	Types of Market Segmentation	78
3.3.3.	Software Packages	80
3.3.4.	Identifying the Actors	81
3.4.	The Software Bottleneck - Relevance and Under- lying Causes	86
3.4.1.	The Increasing Software Cost Burden - Some Basic Figures	87
3.4.2.	The Relevance	87
3.4.3.	Some Underlying Causes	90
3.5.	Perspectives for the Future	91
3.5.1.	Counter-Strategies	92
3.5.2.	The Failure of Attempts to Reorganize the Production of Software	92
3.5.3.	Focus on Firmware Development - A Viable Approach?	93
3.5.4.	Implications for Industrial Restructuring	94
3.5.5.	The Concentration and Globalization of Control	96

4.	THE INTERACTION BETWEEN RECENT TECHNOLOGICAL BREAKTHROUGHS AND INDUSTRIAL RESTRUCTURING	98
4.1.	Implications for Corporate Structure and Strategy	98
4.1.1.	The Search for New Modes to Finance Growth	98
	(a) The traditional approach: focus on yield improvement and learning curve pricing	99
	(b) The defensive approach: cutting back production	102
4.1.2.	Transition to Cut-throat Competition - the Role of Japanese Firms	102
	(a) The subordinate role played by West European firms	103
	(b) The scope for further market penetration by Japanese firms	103
	(c) The widening US-Japanese trade gap in electronic-based products	105
	(d) Towards a new "Japanese challenge" for the world computer and telecommunications markets?	107
4.1.3.	The Search for New Patterns of a Division of Labour Between Firms Involved in Semiconductor Manufacturing	107
	(a) The driving forces	107
	(b) New subcontracting arrangements in the field of "silicon foundry services"	109
	(c) The new trend towards inter-company co-operation	111
	(d) The underlying logic	112
4.2.	The Dialectics of Forward and Backward Integration - Towards a New Semiconductor Industry of Corporate Giants?	114
4.2.1.	Forward versus Backward Integration - Conditioning Factors, Constraints and Recent Trends ..	114
	(a) The emergence of a "Global Electronics Sector"?	114
	(b) Types of vertical integration	115
	(c) A viable approach?	116
4.2.2.	The Recent Wave of Acquisitions and Mergers in the US	117
4.2.3.	The Emergence of New Start-Up Companies - Does it Indicate a Reversal of Consolidation Trends?	119
4.2.4.	Acquisitions and Concentration - The Fate of Firms Producing Semiconductor Equipment?	120

(a)	The semiconductor equipment business - growth potential and structural change	121
(b)	The equipment shortage and the dramatic increase in equipment cost	123
(c)	Acquisition and concentration - trends and underlying causes	123
4.3.	Who Will Dominate the Electronics Complex? Recent Moves by Major Actors	125
4.3.1.	Patterns of Technological Spin-offs - Who will Control and Benefit From Them?	125
(a)	The "Electronics Complex"	125
(b)	A typology of firms involved in the information processing sector	126
(c)	Consequences for industrial restructuring in the information processing sector	126
(d)	Semiconductor versus system firms: the changing balance	127
(e)	Towards radical structural changes of firms engaged in information processing	129
4.3.2.	The New Economics of Computer Building - Its Implications for Corporate Strategy and Structure	130
(a)	Rising capital requirements - towards a "capital crunch"?	130
(b)	The new focus on low-cost production	131
(c)	A further push towards backward integration?	132
4.3.3.	Innovation and Corporate Strategy - the Case of Olivetti	133
(a)	Indicators of success	133
(b)	The Olivetti strategy	134
(c)	Lessons to be drawn	135
5.	IMPLICATIONS FOR THE INTERNATIONAL RESTRUCTURING OF SEMICONDUCTOR MANUFACTURING AND FOR GLOBAL PATTERNS OF TECHNOLOGICAL DOMINANCE AND DEPENDENCE	137
5.1.	Crisis, Innovation and International Restructuring of Industry - The Key Questions of this Study	137
5.2.	Will Industries Be Relocated Back to the North? A Review of Recent Studies on the TV and the Garment Industry	139
5.2.1.	The "Relocation Back to the North"-Hypothesis	139

5.2.2.	An Empirical and Theoretical Critique	140
5.2.3.	The Case of Manufacturing TV Sets	141
5.2.4.	Applying Microelectronic Industrial Auto- mation Systems to the Garment Industry - the Gap Between Expectations and Reality	143
5.3.	Innovation, Comparative Advantage and Changes in International Location Patterns - the Over- all Picture in the Semiconductor Industry	145
5.3.1.	The Context and the Basic Message	145
5.3.2.	The Lack of Empirical Evidence	147
5.3.3.	Recent Changes in the International Location of Semiconductor Manufacturing	148
	(a) Four levels of international restructuring	148
	(b) Locational shifts within the OECD region.....	150
	(c) Three main conditioning factors	150
	(d) Shifting high-technology investment to Japan - the trend of the future?	154
5.4.	The Restructuring of Offshore Chip Assembly - An Empirical Assessment	156
5.4.1.	Major Developments in the Industrial Restruc- turing of Offshore Chip Assembly	156
5.4.2.	A Slowing-down of Investment into Offshore Assembly	157
5.4.3.	Stagnating, If Not Declining Employment	160
5.4.4.	Output and Export Figures Continue to Rise for all Major Offshore Locations	162
5.4.5.	The Rise and Fall of Value-Added in Offshore Chip Assembly	165
5.5.	Possible Future Trends - the Conflicting Evidence	167
5.5.1.	Options Depend on the Actors Involved - the Complex and Dynamic Interplay of Factors Conditioning International Location Patterns	167
5.5.2.	"Automate, But Bring It Back Onshore" - the Rationale Underlying Future Trends in Semi- conductor Assembly?.....	168
5.5.3.	A Renewed Drive for Internationalization - the Case of Siemens	171
5.5.4.	From Worldmarket-Oriented Chip Assembly to an Integrated Electronics Industry - a Real- istic Option for Developing Countries?	172

6.	INNOVATION, CORPORATE STRATEGIES AND INTERNATIONAL RESTRUCTURING OF INDUSTRY - TENTATIVE CONCLUSIONS DRAWN FROM THE EXPERIENCE OF SEMICONDUCTOR MANUFACTURING	180
6.1.	The Basic Message	180
6.2.	The Lack of an Adequate Theoretical Approach ..	182
6.2.1.	Why the Neo-Classical Doctrine Should be Refuted	182
6.2.2.	The Need to Steer Clear of Technological Determinism	183
6.2.3.	The "New International Division of Labour" Theory - a Critique	184
	(a) The theory	185
	(b) Two key analytical statements	186
	(c) A theoretical and methodological critique	187
6.2.4.	The Need for a Fresh Theoretical Approach	189
6.3.	Innovation, Crisis and Industrial Restructuring - What Can Be Learnt from Historical Experience?	189
6.3.1.	Innovation and Industrial Restructuring in a Period of High Growth - the Concept of a "Cumulative Virtuous Circle"	190
	(a) Some basic facts	190
	(b) The concept of a "cumulative virtuous circle" of industrial growth and restructuring	191
	(c) Lessons for today	193
	(d) Factors conditioning the post-war industrial growth boom	194
6.3.2.	From a Virtuous to a Vicious Circle of Growth and Productivity - Conditioning Factors of the Economic Crisis	197
	(a) The profit squeeze and industrial decline ...	197
	(b) Factors behind the profit squeeze - a highly simplified model	199
6.3.3.	Major Structural Changes Underlying the Crisis .	200
	(a) Rising unit labour costs	200
	(b) Changes in the cost structure	202
	(c) The sharpening fiscal crisis of the state	203
	(d) Demand stagnation, particularly for former growth industries	204
	(e) Intensifying world market competition	205
6.3.4.	Crisis, Innovation and Industrial Restructuring - Implications for Capitalist Societies	206

6.4.	Innovation, International Transfer of Technology and Industrial Restructuring - Perspectives for the 1980s	207
6.4.1.	Increasing Constraints to a Consensus among Privileged Actors	208
	(a) A qualitative intensification of international trade competition	209
	(b) New challenges to the technological dominance of OECD-based firms	210
	(c) Capital goods exports to developing countries and transfer of technology - possible future trends	211
6.4.2.	Strategic Options for OECD-Countries	214
	(a) The new OECD doctrine of industrial restructuring	214
	(b) The impact of the economic crisis	215
	(c) Constraints to intra-OECD cooperation	216
6.4.3.	Perspectives	217
6.5.	Towards an Alternative Theoretical Approach: Capital Accumulation, Work Relations and New Information Technologies	217
6.5.1.	Work and Labour Rationalization	218
6.5.2.	Rationalization of Constant Capital	219
6.5.3.	New Information Technologies - Towards a Radical Change of Established Modes of Industrial Production	221
6.5.4.	Implications	225
6.6.	Crisis, Innovation and International Division of Labour - Concluding Remarks	225
Notes	228
Glossary	262
Bibliography	266
