APPLIED STATICS, STRENGTH OF MATERIALS, AND BUILDING STRUCTURE DESIGN

Joseph B. Wujek
Front Range Community College

Prentice Hall
Upper Saddle River, New Jersey Columbus, Ohio

CONTENTS

Chapter 1 INTRODUCTION TO BUILDING STRUCTURAL ENGINEERING 1

1.1 The Evolution of Building Engineering 1
1.2 Building Structural Design and Engineering 8
1.3 Mechanics and Strength of Materials 8
1.4 Building Codes and Standards 9
1.5 Training in Structural Engineering 10
1.6 The Emerging Role of the Engineering Technician 11
1.7 Engineering Data Reporting 12
Exercises 19

Chapter 2 FORCES AND BASIC FORCE SYSTEMS 21

2.1 Newton's Laws of Motion 21
2.2 Force and Mass 22
2.3 Properties of a Force 23
2.4 The Principle of Transmissibility 24
2.5 Types of Forces 26
2.6 Force Systems 26
2.7 Graphic Solution of Concurrent Coplanar Force Systems 27
2.8 Components of Force 29
2.9 Mathematical Solution of Concurrent Coplanar Force Systems 34
2.10 Reaction of a Resultant Force 37
Exercises 37

Chapter 3 STATIC EQUILIBRIUM 44

3.1 Moment of a Force 44
3.2 Couples 47
3.3 Conditions of Static Equilibrium 49
3.4 The Free-Body Diagram 50
3.5 Constructing the Free-Body Diagram 51
3.6 Types of Reactions 51
3.7 Solving Unknown Forces in Static Equilibrium 55
3.8 Concentrated and Distributed Forces 57
3.9 Statically Determinate and Indeterminate Bodies 63
Exercises 65

Chapter 4 BEAMS IN STATIC EQUILIBRIUM 72

4.1 The Beam 72
4.2 Solving for Unknown Reactions on Beams 73
Exercises 82

Chapter 5 ANALYSIS OF SIMPLE FRAME, TRUSS, AND CABLE SYSTEMS 89

5.1 The Triangular Structural Unit 89
5.2 Trusses and Frames 91
5.3 Planar Truss Analysis 92
5.4 Cable Systems 101
Exercises 106

Chapter 6 SIMPLE STRESS 115

6.1 Mechanical Properties of Materials 115
6.2 Stress 16
6.3 Tensile Stress 119
6.4 Compressive Stress 120
6.5 Shear Stress 122
6.6 Maximum Stress 123
6.7 Average Stress versus Real Stress 125
Exercises 126

Chapter 7 DEFORMATION AND STRAIN 131

7.1 Deformation 131
7.2 Longitudinal Strain 132
7.3 Elasticity 134
7.4 Hooke's Law 135
7.5 Elastic Limit 136
7.6 Modulus of Elasticity 137
7.7 Longitudinal Deformation 137
7.8 Lateral Strain 139
7.9 Poisson's Ratio 140
7.10 Lateral Deformation 142
Exercises 143

Chapter 8 TORSIONAL STRESS AND STRAIN 146

8.1 Torsion 146
8.2 Torque 146
8.3 Torsional Stress 148
8.4 Torsional Strain 150
Exercises 152

Chapter 9 THERMAL DEFORMATION AND STRESS 154

9.1 Thermal Deformation 154
9.2 Thermal Stress 157
9.3 Evaluating Thermal Stresses 159
Exercises 161

Chapter 10 MATERIAL TESTING AND SIMPLE DESIGN 165

10.1 Material Testing 165
10.2 Tensile Test 166
10.3 Compression Test 170
10.4 Interpreting Material Test Results 174
10.5 Basic Design Methods 180
10.6 Allowable Stress or Working Stress Design 181
10.7 Strength Design 183
Exercises 184

Chapter 11 SHEAR IN BEAMS 188

11.1 Shear Forces in Beams 188
11.2 Shear Calculations and Diagrams 189
11.3 Maximum Vertical Shearing Force 194
11.4 Where Shear Passes through Zero 197
Exercises 205

Chapter 12 BENDING IN BEAMS 206

12.1 Bending in Beams 206
12.2 Stresses Caused by Bending 209
12.3 Bending Moment and Resisting Moment 210
12.4 Bending Moment Calculations and Diagrams 212
12.5 Maximum Bending Moment 217
12.6 Bending Curvature 221
12.7 Interpreting Beam Analysis 226
12.8 Inflection Points 230
12.9 Limitations of This Analysis Approach 232
12.10 Derived Formulas for Common Beams 233
Exercises 234

Chapter 13 CENTER OF GRAVITY AND CENTROID OF A SHAPE 236

13.1 The Center of Gravity 236
13.2 Finding the Center of Gravity 237
13.3 The Centroid 244
13.4 Finding the Centroid 244
Exercises 247

Chapter 14 PROPERTIES OF SECTION PROFILES 253

14.1 The Moment of Inertia 253
14.2 Moment of Inertia about the Centroidal Axis 253
14.3 Approximating the Moment of Inertia 255
14.4 Finding the Actual Moment of Inertia 257
14.5 Moment of Inertia and a Beam Section Profile 264
14.6 The Polar Moment of Inertia 266
14.7 The Section Modulus 267
14.8 Finding the Section Modulus 269
14.9 The Radius of Gyration 271
14.10 Tabular Structural Section Profile Data 273
14.11 Built-up Sections and Plate Girders 273
Exercises 273

Chapter 15 BUILDING LOADS 279

15.1 Types of Building Loads 279
15.2 Service and Design Loads 287
15.3 Factored Loads and Load Combinations 287
15.4 Transfer of Loads 291
15.5 Tributary Loads on Beams 294
15.6 Tributary Loads on Columns 302
15.7 Lateral Loads 302
Exercises 303

Chapter 16 FUNDAMENTAL BEAM DESIGN PRINCIPLES 307

16.1 Flexure 308
16.2 The Flexure Formula 308
16.3 Flexure Investigation 310
16.4 Shear 312
16.5 Shear Investigation 312
16.6 Deflection 313
16.7 Deflection Investigation 314
16.8 Bearing Stresses 317
16.9 Bearing Stress Investigation 317
16.10 Lateral Buckling and Rotation in Beams 319
16.11 Impact Loading 319
Exercises 320

Chapter 17 FUNDAMENTAL COLUMN DESIGN PRINCIPLES 324

17.1 Column Crushing 325
17.2 Column Buckling 328
17.3 Euler's Column Formula 328

17.4 Eccentric Loading and Bending of a Column 329
17.5 Column Slenderness 330
17.6 Column Section Profiles 331
17.7 Column End Connections 333
17.8 Dynamics of Column Loading 334
17.9 Column Design 334
Exercises 334

Chapter 18 STRUCTURAL STEEL 336

18.1 Types of Structural Steel 336
18.2 Structural Steel Shapes 338
18.3 Structural Steel Design Standards 341
18.4 Steel Manuals 342
Exercises 342
Special Projects 343

Chapter 19 DESIGN OF SIMPLE STRUCTURAL STEEL BEAMS 357

19.1 Selection from Beam Tables 357
19.2 Basic Beam Design Procedure 359
19.3 Other Factors in Steel Beam Design 360
Exercises 367

Chapter 20 DESIGN OF OPEN-WEB STEEL JOISTS 369

20.1 Steel Joists 369
20.2 Joist Designations 370
20.3 Selection from Joist Tables 371
20.4 Other Factors in Steel Joist Design 373
20.5 Bridging 375
Exercises 377

Chapter 21 DESIGN OF SIMPLE STRUCTURAL STEEL COLUMNS 386

21.1 Column Tables 386
21.2 Selection from Column Tables 388
21.3 Basic Column Design Procedure 388
21.4 Column Base Plates 393
Exercises 397

Chapter 22 TIMBER AND ENGINEERED WOOD PRODUCTS 399

22.1 Sawn Lumber 399
22.2 Engineered Wood Products 399
22.3 Lumber Sizes and Grades 401
22.4 Moisture Content 403

22.5 Properties of Structural Lumber 404
22.6 Old-Growth versus Farmed Lumber 407
22.7 Adjustment Factors 408
22.8 Structural Wood Design Standards 409
Exercises 410
Special Projects 411

Chapter 23 DESIGN OF SIMPLE TIMBER BEAMS 415

23.1 Basic Beam Design Procedure 415
23.2 Gang-Laminated Beam Sections 419
23.3 Other Factors in Timber Beam Design 423
Exercises 427

Chapter 24 DESIGN OF WOOD JOISTS AND RAFTERS 429

24.1 Joist and Rafter Tables 429
24.2 Lateral Stability 434
Exercises 435

Chapter 25 DESIGN OF SIMPLE TIMBER COLUMNS 437

25.1 Basic Column Design Procedure 437
25.2 Alternative Column Design Procedure 440
Exercises 444

Chapter 26 REINFORCED CONCRETE PRINCIPLES 447

26.1 Concrete 447
26.2 Reinforced Concrete 450
26.3 Reinforcement 451
26.4 Concrete Cover 452
26.5 Bonding Stress and Development Length 453
26.6 Reinforced Concrete Design Standards 454
Exercises 455
Special Projects 455

Chapter 27 DESIGN OF SIMPLE REINFORCED CONCRETE BEAMS 477

27.1 Tensile Reinforcement 477
27.2 Web Reinforcement 478
27.3 Basic Beam Design Procedure 480
Exercises 492

Chapter 28 DESIGN OF SIMPLE REINFORCED CONCRETE COLUMNS 494

28.1 Tied Concrete Columns 494
28.2 Longitudinal Bar Reinforcement 494

28.3 Tie and Spiral Reinforcement 495
28.4 Basic Column Design Procedure 496
Exercises 500

Chapter 29 MASONRY PRODUCTS AND CONSTRUCTION TECHNIQUES 502

29.1 Masonry Units 502
29.2 Mortar 510
29.3 Grout 512
29.4 Reinforcement 512
29.5 Masonry Wall and Column Construction 520
29.6 Masonry Design Standards 523
Exercises 526

Chapter 30 DESIGN OF SIMPLE MASONRY WALLS AND COLUMNS 528

30.1 Basic Masonry Wall and Column Design Procedure 528
30.2 Other Factors in Masonry Wall and Column Design 540
Exercises 543

Appendix A Useful Tables and Formulas 545
Appendix B Section Profile Properties of Steel Members 555
Appendix C Section Profile Properties of Wood Members 647
Appendix D Math Review 661
Answers 676
Index 683
