Contents

Part I: Particle Models

1. Particles and Vector Bundles	3
1.1 Spacetimes	3
1.2 Elementary Particles	4
1.3 Spinors	5
1.4 Interactions	5
1.5 Matter Fields Versus Interaction Carriers	6
1.6 Antiparticles	7
1.7 C -parity*	8
1.8 Generalizations of Particles	9
1.9 Generalized Spin Symmetry*	9
1.10 Composite Particles	10
1.11 Bosons and Fermions	11
1.12 Classification of Particles	11
1.13 Orbital Angular Momentum	12
1.14 Spin and Parity	13
1.15 The Lightest Hadrons	14
1.16 Models of Free Matter Particles with Spins 0 and 1/2	17
1.17 Higher Spins	19
1.18 Natural Bundles	20
1.19 The Physical Meaning of Vector Bundle Operations*	22
2. Invariants of Particles*	24
2.1 Representations of $SU(2)$ and $SO(3)$	24
2.2 Representations of $O(3)$	26
2.3 Geometric Realizations	27
2.4 Nonrelativistic Particle Models	28
2.5 Canonical Quantization	31
2.6 Nonrelativistic Spin	32
2.7 Spin and Angular Momentum	33
2.8 Parity Versus Orbital Parity	35
2.9 Isospin in Nature	36
2.10 Geometry of Isospin	37
2.11 Isospin Versus Nonrelativistic Spin	39
2.12 G -parity	39

2.13	Strangeness and Other Generalized Charges	41
2.14	A Summary of Particle Invariants	43
3.	More on Relativistic Particle Models*	46
3.1	Reducible Representations of $O(3)$	46
3.2	Tensor Products of Representations	47
3.3	The Lorentz Group	49
3.4	Infinitesimal Representations of $O(3,1)$	50
3.5	The Role of $SL(2, \mathbb{C})$	53
3.6	Conjugate Representations	54
3.7	Representations of $O^\dagger(3, 1)$	55
3.8	Some Geometric Examples	57
3.9	The Choice of Particle Models	58

Part II: Unifications

4.	The Electromagnetic Interaction	63
4.1	Nonrelativistic Electrodynamics	63
4.2	Relativistic Maxwell Equations	64
4.3	Four-momentum and Relativistic Energy	66
4.4	Relativistic Lorentz Force Law	67
4.5	Photons	68
4.6	Potentials	69
4.7	Lagrangians for a Charged Particle	69
4.8	Relativistic Quantization	71
4.9	The Minimum-Coupling Substitution	72
4.10	Potentials as Connection Forms	73
4.11	Consequences of Introducing the Electromagnetism Bundle	75
4.12	Interaction Expressed by Tensor Multiplication	76
4.13	Quantization of the Electric Charge	77
4.14	The Electric Charge and Antiparticles	79
5.	The Yang-Mills Description of Interactions	80
5.1	Vector Bundle Operations	80
5.2	G -structures	81
5.3	Connections	83
5.4	Yang-Mills Fields	83
5.5	Lack of Naturality	86
5.6	Restoring Naturality via Bound States	86
5.7	Bound States of Interaction Carriers*	88
5.8	Restoring Naturality via Symmetry Breaking	89
5.9	Gauge Symmetry*	92
5.10	Harmonic Line Bundles*	94
5.11	The Lorentz Gauge Condition*	95

6. The Standard Model	97
6.1 Geometry of Electromagnetism	97
6.2 Geometry of the Quark Model	98
6.3 More on Spinors	102
6.4 Hermitian Planes	104
6.5 Geometry of the Electroweak Model	106
6.6 Remarks	111
6.7 The Standard Model of Particles and Interactions	113
6.8 Invariant Inner Products and Coupling Constants*	114
6.9 Massiveness Versus Masslessness*	117
7. Grand Unified Theories	122
7.1 The SU(5) Grand Unification	122
7.2 The Spin(10) Theory*	127
7.3 Further Remarks	127
8. Unitary Symmetries of Hadrons*	130
8.1 Quarks and Quantum Numbers	130
8.2 Representations of SU(n)	132
8.3 Flavor Symmetries	138
8.4 More on SU(n) Symmetry	143
8.5 Quarks and Isospin	148
8.6 Unitary Symmetry	149
8.7 Quark Composition of Hadrons	150
9. Hadrons and the Weak Interaction*	155
9.1 Natural Subspaces of Direct Sums	155
9.2 Quark Mixing and the Cabibbo Angle	158
9.3 The Kobayashi-Maskawa Parameters	159
9.4 Extension of the Electroweak Model to Quarks	161
10. Lagrangian in Classical Field Theory*	164
10.1 Lagrangian Densities	164
10.2 Energy Density	169
10.3 Interaction Lagrangians	171
11. Symmetry Breaking and Positive Masses*	176
11.1 Vacuum States	176
11.2 Lagrangians and Potentials	177
11.3 Vacua and Masses	181
11.4 The Higgs Mechanism	183
11.5 Dynamics of the Electroweak Model	186
