Graduate School of Management
University of Rochester

GEORGE L. NEMHAUSER,

Department of Operations Research
Cornell University

Integer Programming

A WILEY-INTERSCIENCE PUBLICATION

JOHN WILEY & SONS

NEW YORK · LONDON · SYDNEY · TORONTO

Contents

1	Introduction	2
1.1	Background	2
1.2	Defining an Integer Linear Programming Problem	5
1.3	Methods for Solving the ILP	7
1.4	Formulating Models in Binary Variables	10
1.5	Applications	13
1.6	Exercises	19
1.7	Notes	20
2	Linear Programming	24
2.1	Introduction	24
2.2	Basic Solutions, Extreme Points, and Optimal Solutions	26
2.3	Improved Basic Feasible Solutions and Optimality Conditions	28
2.4	The Simplex Algorithm	30
2.5	Finding a First Basic Feasible Solution. The Two-Phase Method	36
2.6	Degeneracy and Cycling	38
2.7	The Determinant and Inverse of the Basis Matrix	41
2.8	A Modified Simplex Algorithm for Bounded Variables	43
2.9	Duality	48
2.10	The Dual Simplex Algorithm	51

2.11	<i>Adding Variables and Constraints</i>	54
2.12	<i>Exercises</i>	58
2.13	<i>Notes</i>	59
3	Integer Programming and Graphs	60
3.1	<i>Introduction</i>	60
3.2	<i>Basic Definitions and Elementary Properties of Graphs</i>	62
3.3	<i>Unimodularity</i>	66
3.4	<i>Some Totally Unimodular LP's on Graphs</i>	70
3.5	<i>An Algorithm for the Shortest Path Problem</i>	74
3.6	<i>Matching and Covering on Graphs</i>	77
3.7	<i>An Algorithm for Maximum Matching</i>	88
3.8	<i>Exercises</i>	101
3.9	<i>Notes</i>	105
4	Enumeration Methods	108
4.1	<i>Enumeration Trees</i>	108
4.2	<i>The Concept of Branch and Bound</i>	111
4.3	<i>Branch and Bound for the ILP</i>	114
4.4	<i>Efficient Branching and Bounding</i>	118
4.5	<i>Implicit Enumeration</i>	122
4.6	<i>Additional Tests for Implicit Enumeration</i>	127
4.7	<i>Surrogate Constraints</i>	130
4.8	<i>Extensions to the MILP</i>	134
4.9	<i>Solving the MILP by Partitioning</i>	135
4.10	<i>Partitioning and Implicit Enumeration</i>	143
4.11	<i>Exercises</i>	148
4.12	<i>Notes</i>	152
5	Cutting Plane Methods	154
5.1	<i>Introduction</i>	155
5.2	<i>A Fundamental Cut</i>	157
5.3	<i>Cuts in the Method of Integer Forms</i>	158
5.4	<i>A Rudimentary Algorithm for the Method of Integer Forms</i>	162
5.5	<i>A Finite Algorithm for the Method of Integer Forms</i>	162
5.6	<i>Cuts with Unit Coefficients</i>	165
5.7	<i>Roundoff Problems and Integrality Tests</i>	167
5.8	<i>Dual All-Integer Cuts</i>	167
5.9	<i>A Finite Dual All-Integer Algorithm</i>	170
5.10	<i>Primal All-Integer Cuts</i>	175
5.11	<i>A Rudimentary Primal All-Integer Algorithm</i>	176
5.12	<i>A Finite Primal All-Integer Algorithm</i>	178
5.13	<i>A Summary of the Basic Algorithms</i>	184
5.14	<i>Composite Cuts in the Method of Integer Forms</i>	185

5.15	Cuts with Different Values of h	193
5.16	Deep Cuts	197
5.17	A Cutting Plane Algorithm for the MILP	200
5.18	Intersection Cuts	203
5.19	Exercises	207
5.20	Notes	211
6	The Knapsack Problem	214
6.1	Problem Formulation	214
6.2	Recursive Equations I	216
6.3	Recursive Equations II	217
6.4	Recursive Equations III	220
6.5	A Periodic Property	223
6.6	Modulo Arithmetic and Abelian Groups	224
6.7	A Group Knapsack Problem	229
6.8	Group Recursion I	230
6.9	Group Recursion II	231
6.10	A Relation between the Knapsack and Group Knapsack Problems	236
6.11	Shortest Path Formulations of Knapsack Problems	239
6.12	Transforming an ILP in Bounded Variables to a Knapsack Problem in Bounded Variables	241
6.13	Exercises	244
6.14	Notes	248
7	Integer Programming Over Cones	250
7.1	Problem Formulation and Basic Analysis	250
7.2	Equivalent ILPC Representations	259
7.3	Group Knapsack Representation of an ILPC	263
7.4	Calculation of Smith Normal Form	267
7.5	A Sufficient Condition for an ILPC to Solve an ILP	273
7.6	Solving an ILP Using an ILPC and Branch and Bound	277
7.7	Properties of Corner Polyhedra	283
7.8	Exercises	292
7.9	Notes	295
8	The Set Covering and Partitioning Problems	298
8.1	Introduction	298
8.2	Some Applications	301
8.3	Reductions	302
8.4	Handling Binary Data	304
8.5	Some Extreme Point Properties	305
8.6	A Cutting Plane Algorithm for the Set Covering Problem	308
8.7	An Enumeration Algorithm for the Set Covering Problem	312

8.8	<i>An Enumeration Algorithm for the Set Partitioning Problem</i>	315
8.9	<i>Exercises</i>	318
8.10	<i>Notes</i>	321
9	Approximate Methods	324
9.1	<i>Introduction</i>	324
9.2	<i>Finding Local Optima by Direct Search</i>	326
9.3	<i>Finding Feasible Solutions</i>	332
9.4	<i>Exercises</i>	336
9.5	<i>Notes</i>	337
10	Integer Nonlinear Programming	340
10.1	<i>Extensions of the Linear Techniques</i>	340
10.2	<i>A Lexicographic Enumeration Algorithm</i>	344
10.3	<i>Pseudo-Boolean Programming</i>	348
10.4	<i>Bottleneck Integer Programming</i>	351
10.5	<i>The Traveling Salesman Problem</i>	354
10.6	<i>Exercises</i>	361
10.7	<i>Notes</i>	365
11	Computational Experience	368
11.1	<i>Introduction</i>	368
11.2	<i>Test Problems</i>	370
11.3	<i>Computational Results. General Methods</i>	376
11.4	<i>Computational Results. Special Purpose Methods</i>	383
11.5	<i>Summary and Synthesis</i>	387
	Bibliography	392
	Author Index	415
	Subject Index	421
