# Regression and factor analysis applied in econometrics

J. H. F. SCHILDERINCK Tilburg School of Economics, Social Sciences and Law, the Netherlands

Second edition

Martinus Nijhoff Social Sciences Division Leiden 1978

### Contents

#### PREFACE / V

## 1. Some theoretical and statistical aspects of a linear econometric model / 1

- 1.1 Motivation for the use of a model / 1
- 1.2. Definition of a model / 2
- 1.3. The linear econometric model / 3
- 1.4. The variables / 6
- 1.5. The general form of a single equation linear econometric model / 8
- 1.5.1. Ordinary least squares (O.L.S.) / 9
- 1.5.2. Generalized least squares (G.L.S.) / 13
- 1.6. The general form of a simultaneous linear econometric model / 15
- 1.6.1. The formulation of a simultaneous linear econometric model / 16
- 1.6.2. Two stage least squares / 23
- 1.6.3. Three stage least squares / 35
- 1.7. Statistics for a single equation linear econometric model / 40
- 1.7.1. The adjusted correlation coefficient / 40
- 1.7.2. The relative variance-share coefficient / 43
- 1.7.3. The t-test / 44
- 1.7.4. Tests on multicollinearity / 47
- 1.7.5. Tests on autocorrelation / 51

#### 2. Factor analysis as a method of economic research / 59

- 2.1. Motivation for the use of factor analysis / 59
- 2.2. Aim of factor analysis / 62

- 2.3. Regression analysis versus factor analysis / 64
- 2.4. Normalization of variables / 67
- 2.5. The model of factor analysis / 70
- 2.6. The solution of the factor analysis model / 77
- 2.6.1. The geometric approach / 77
- 2.6.2. The algebraic approach / 82
- 2.7. The interpretation of the commonfactor coefficients / 98
- 2.8. Factor rotation / 101

#### 3. Structure of the model / 114

- 3.1. The structure of expenditure in the Dutch economy in the pre-war and post-war period / 114
- 3.2. The structure of the model / 134
- 3.3. The consumption equation / 142
- 3.4. The investment equation / 165
- 3.5. The inventory equation / 172
- 3.6. The export equation / 175
- 3.7. The import equation / 185
- 3.8. The employment and unemployment equation / 187
- 3.9. The price equations / 189

#### 4. Some applications of factor analysis / 196

- 4.1. A factor analytical comparison of each variable in the whole of variables / 196
- 4.2. Investments / 202
- 4.2.1. The relation between investment and financing variables / 202
- 4.2.2. The relation between investment and final expenditure / 213
- 4.3. Consumption / 220
- 4.4. Government expenditure / 227
