Preface	ix
<b>1 Introduction to the Number-theoretic Method</b>	<b>1</b>
1.1 Statistical problems	1
1.1.1 Evaluation for the probabilities and moments of a multivariate distribution	2
1.1.2 Optimization and statistics	5
1.1.3 Representative points of a continuous distribution	9
1.1.4 Experimental and uniform design	10
1.1.5 Geometric probability and simulation	11
1.1.6 Miscellaneous	13
1.2 Discrepancy and $F$ -discrepancy	14
1.3 NT-nets on $C^s$	21
1.3.1 The $glp$ set	21
1.3.2 The $gp$ set	26
1.3.3 The $H$ -set	27
1.4 Other measures of uniformity	33
1.4.1 The star discrepancy $D^*$	33
1.4.2 The $\ell_p$ -discrepancy	34
1.4.3 Dispersion	34
1.4.4 Mean square error (MSE)	37
1.4.5 Sample moment	38
1.5 The NT-nets on a ball, a sphere and a simplex	39
1.5.1 NT-net on $A_s$	45
1.5.2 NT-net on $B_s$	46
1.5.3 NT-net on $U_s$	49
1.5.4 NT-net on $V_s$	50
1.5.5 NT-net on $T_s$	52
1.6 Other methods	53
Exercises	58

<b>2</b>	<b>Numerical Evaluation of Multiple Integrals in Statistics</b>	<b>60</b>
2.1	NTM for numerical integration in a rectangle	60
2.1.1	Classical method	61
2.1.2	Monte Carlo method	61
2.1.3	Number-theoretic method	62
2.2	Spherically and elliptically symmetric distributions	68
2.3	Probability calculation of a multivariate distribution	74
2.4	Numerical integration over a bounded domain	77
2.4.1	Indicator function method	78
2.4.2	Transformation method	80
2.4.3	Direct method	87
2.5	Moments of order statistics	89
2.6	Distributions on the simplex $T_s$	94
2.6.1	The Dirichlet distribution	95
2.6.2	Additive logistic elliptical distributions	97
2.7	Applications in Bayesian statistics	98
	Exercises	101
<b>3</b>	<b>Optimization and its Applications in Statistics</b>	<b>104</b>
3.1	A number-theoretic method for optimization	104
3.2	A sequential algorithm (SNT0)	111
3.3	Maximum likelihood estimation	117
3.4	Nonlinear regression model	123
3.4.1	Linearization method	124
3.4.2	Partial linearization method	127
3.4.3	RSNT0 on a large domain	130
3.5	Robust regression model	132
3.6	A version of SNT0 in special regions, SNT0-D	135
3.7	A system of nonlinear equations	136
3.8	Regression with constraints	141
3.9	Mode of a multivariate distribution	144
3.10	Mixture of SNT0 and other methods	147
3.10.1	Mixtures of SNT0 and Newton-like method	148
3.10.2	Mixtures of SNT0 and Monte Carlo optimization	149
	Exercises	150

<b>4</b>	<b>Representative points of a multivariate distribution</b>	<b>155</b>
4.1	<i>F</i> -discrepancy criterion	155
4.2	Rep-points of some classes of multivariate distributions	159
4.2.1	Classes of spherically and elliptically symmetric distributions	159
4.2.2	The class of multivariate $\ell_1$ -norm symmetric distributions	163
4.2.3	The class of multivariate Liouville distributions	164
4.3	An efficient method for generating an NT-net on $U_s$	166
4.4	MSE criterion (univariate case)	170
4.5	MSE criterion (multivariate case)	175
4.6	Mse-rep-points of spherical distributions	179
4.7	Remarks and applications of rep-points to integration	184
4.8	Applications of rep-points in simulation	191
4.9	Applications of rep-points in geometric probability	195
	Exercises	197
<b>5</b>	<b>Experimental Design and Design of Computer Experiments</b>	<b>200</b>
5.1	Introduction	200
5.2	Uniform design	204
5.2.1	The table of uniform design	206
5.2.2	The equivalence of design matrices	208
5.2.3	Uniformity of design	210
5.3	Data analysis and examples	212
5.4	Measurements of uniformity of design	216
5.4.1	Geometry method	216
5.4.2	Statistical method	221
5.5	Uniform designs of experiments with mixtures	226
5.5.1	Scheffé type design	228
5.5.2	Uniform design - discrepancy criterion	231
5.5.3	Uniform design - MSE criterion	234
5.6	Design of computer experiments	237
	Exercises	244

<b>6</b>	<b>Some applications in statistical inference</b>	<b>247</b>
6.1	Maximum likelihood estimation	247
6.2	Robust estimation of the mean vector	251
6.3	Tests for multinormality (I)	256
6.4	Tests for multinormality (II)	264
6.5	Tests for sphericity	271
6.6	Projection pursuit	278
	Exercises	285
<b>Appendix A</b>	<b>Tables of <math>glp</math> set</b>	<b>286</b>
A.1	The $glp$ sets with large $n$	286
A.2	The $glp$ sets with small $n$	294
<b>Appendix B</b>	<b>Integrations and uniform distributions on <math>D</math></b>	<b>297</b>
B.1	The domain $A_s$	299
B.2	The domains $B_s$ and $U_s$	301
B.3	The domains $V_s$ and $T_s$	310
