## CONTENTS

FOREWORD

vii

INTRODUCTORY METEOROLOGY AND FLUID DYNAMICS - <i>L. Hasse</i>	1
1. Some Deductions from Basic Physics	1
2. Large-Scale Atmospheric Circulations	11
3. Synoptic Scale Circulations	23
4. Mesoscale Circulations	27
5. Convection and Stability	30
6. Turbulence and the Planetary Boundary Layer	35
7. Interface Dynamics	39
7.1 Flow at a solid, level surface	39
7.2 Flow at a fluid interface	42
7.3 Stability effects in the surface layer	42
7.4 Parameterization	43
8. Practical Aspects of Atmospheric Transports	45
8.1 Vertical transports	45
8.2 Horizontal transports	46
INTRODUCTORY PHYSICAL OCEANOGRAPHY - <i>F. Dobson</i>	53
Large-scale Oceanography	53
Geostrophic, baroclinic and barotropic motions	54
"Ekman" transport	56
"Sverdrup" transport	58
Westward intensification	59
Physical properties of sea water	62
Water property distributions and tracers	63
Thermohaline circulation	65
Diffusion and mixing	68
Turbulent mixing	69
Mesoscale Oceanography	71
Ocean eddies	71
Gulf stream rings	72
Frontal processes	76
Tides and large-scale waves	80
Internal waves	83
The Oceanic Mixed Layer	84
Introduction	84
Time and space scales	85
Modelling the mixed layer	85
Forcing variables	87

Solar radiation	87
Wind forcing	90
Buoyancy	91
Conservation relations	92
Shear instabilities	92
Entrainment	93
Advection	93
Langmuir circulations	94
Role of the mixed layer in ocean dynamics and climate	97
Sea Surface Waves	98
Introduction	98
Wave breaking	103
Wave generation and growth	106
Appendix : Definitions	111
ANNOTATED BIBLIOGRAPHY	121
INDEX	123
