# CONTENTS

---

<b>1</b>	<i>Introduction</i>	<b>1</b>
	The Relationship Between Separation and Analysis	
<b>2</b>	<i>Definitions and Classifications</i>	<b>4</b>
	Basic Definitions	
	Description of Major Separation Methods	
	Classification of Separation Methods	
	Presentation of Data for Group I Methods	
	Measures of Separation Efficiency	
<b>3</b>	<i>Heterogeneous Equilibrium and Thermodynamics</i>	<b>31</b>
	Basic Definitions and Equations	
	Partition Equilibria	
	Change of State	
	Deviations from Ideality	
<b>4</b>	<i>Kinetics</i>	<b>43</b>
	Laws of Diffusion	
	Diffusion Through a Membrane	
	Diffusion and Mass Transfer in Chromatography	
	Electrodiffusion	
	Slow Kinetic Processes	
<b>5</b>	<i>Physical and Mechanical Forces in Separations</i>	<b>55</b>
	Partitioning	
	Intermolecular and Interionic Forces	
	Absorption	
	Adsorption	
	Mechanical Processes	
	Sieving	
	Inclusion Compounds	

<b>6</b>	<i>Chemical Reactions and Processes</i>	<b>70</b>
	Coordination Complexes	
	Precipitation	
	Ion Exchange	
<b>7</b>	<i>Distillation</i>	<b>86</b>
	Some Terms and Definitions	
	Apparatus	
	Theory	
	Practical Applications	
	Special Techniques	
	Evaluation	
	Sublimation and Zone Refining	
<b>8</b>	<i>Zone Broadening in Multistep Processes</i>	<b>101</b>
	Equilibrium Approach (as in LLE)	
	The Distinction Between Bands and Peaks	
	Nonequilibrium Approach (as in Chromatography)	
<b>9</b>	<i>Zone Disengagement and the Achievement of Separation</i>	<b>128</b>
	Zone Migration Rates	
	The Achievement of Separation	
<b>10</b>	<i>Liquid-Liquid Extraction</i>	<b>135</b>
	Classification of Methods	
	Measures of Efficiency	
	Theory	
	Practical Considerations	
<b>11</b>	<i>Chromatography: General</i>	<b>148</b>
	Classification of Methods	
	Linearity and Ideality	
	Definitions, Equations, and Theory	
	Some Comparisons Between GC and LC	
	Common Features	
	Special Techniques	
<b>12</b>	<i>Gas Chromatography</i>	<b>166</b>
	Theory	
	Some Symbols and Definitions	

	Instrumentation	
	Retention Parameters and Qualitative Analysis	
	Classification of Liquid Phases	
	Temperature Effects	
	Optimization	
	Quantitative Analysis	
	Miscellaneous Topics	
	Evaluation	
<b>13</b>	<i>Liquid Chromatography in Columns: General</i>	<b>210</b>
	Classical LC	
	High-Pressure LC Apparatus	
	Theory	
	Miscellaneous Topics	
<b>14</b>	<i>Liquid Chromatography in Columns: Individual Techniques</i>	<b>230</b>
	Liquid-Solid Chromatography	
	Liquid-Liquid Chromatography	
	Ion-Exchange Chromatography	
	Gel-Permeation Chromatography	
<b>15</b>	<i>Plane Chromatography</i>	<b>265</b>
	Theory	
	Apparatus and Techniques	
	Comparison of Thin Layer and Paper Chromatography	
	Comparison of LC Separations in Columns and on Plane Surfaces	
	Summary	
<b>16</b>	<i>Zone Electrophoresis</i>	<b>280</b>
	Theory	
	Apparatus and Techniques	
	Summary and Evaluation	
<b>17</b>	<i>Differential Dialysis</i>	<b>289</b>
	Theory	
	Apparatus and Procedures	
	Summary	

<b>18</b>	<i>Selection of a Separation Method</i>	294
	Ten Criteria	
	Approaching a Problem	
	<i>Appendix: Typical Chromatographic Calculations</i>	299
	<i>Index</i>	305
