Contents

Foreword	viii
Preface	x
1 Background to the investigation	1
1.1 Education, training and curriculum development	1
1.2 The taxonomy of educational objectives	3
1.3 Methods of analysis: surveys	8
1.4 Methods of analysis: participant observation and critical incidents	10
1.5 Methods of analysis: diaries	12
1.6 Training and organisational development	13
1.7 Overview	14
2 An approach to the study of work	16
2.1 The firm in which the investigation took place	16
2.2 An outline of the research	22
2.3 The operational base	25
2.4 The construction and administration of checklists	27
2.5 The classification method	30
2.6 How many clusters?	33
2.7 Determining group characteristics	34
2.8 Extracting the attitude dimensions	36
2.9 Identifying features of experience	38
3 Work patterns	42
3.1 The fourteen engineering activities	42
3.2 The twelve engineering worktypes	52
3.3 New perspectives on engineering work	66
4 Differing perceptions	74
4.1 Attitudes, perceptions and the semantic differential	75
4.2 Job perceptions	76
4.3 Self-perceptions and occupational stereotypes	81
4.4 Opinions about training	88
4.5 Job descriptions and worker requirements	90
5 The firm as a learning system	94
5.1 Factors influencing work performance: experience, qualifications and expectations	95
5.2 Training within the firm	100

5.3 The frontiers of manufacturing technology	101
5.4 The learning process and innovation	102
5.5 Implications for training and education	103
6 Implications	105
6.1 Industry-wide job analysis	105
6.2 Issues in the supply and demand for technologists: engineering design	108
6.3 The management activity	110
6.4 Education, training, and work behaviour	111
6.5 The evaluation of training	115
Bibliography	119
Appendix	129
Index	155
