GRIFFIN  LONDON

## CONTENTS

<i>Chapter</i>		<i>Page</i>
1	INTRODUCTION	
1.1	Historical background	1
1.2	Notation and terminology	3
2	THE DIFFERENTIAL EQUATIONS METHOD	
2.1	Pearson's equations	5
2.2	Van Uven's equations	7
2.2a	Definition	7
2.2b	Solutions	7
2.2c	Properties	10
2.3	Remarks	11
3	BIVARIATE EDGEWORTH EXPANSION	
3.1	The expansion	12
3.2	Coefficients	14
3.3	The conditional moments	15
3.4	Applications	20
3.4a	Fitting	20
3.4b	Other applications	23
3.5	Remarks	23
4	THE TRANSLATION METHOD	
4.1	Introduction	24
4.2	Johnson's transformations	24
4.2a	Definition	24
4.2b	The conditional distribution	25
4.2c	The conditional moment curves	25
4.2d	Median regression	26
4.2e	A method of fitting	27
4.3	An extension	30
4.3a	Boundary distributions	30
4.3b	Properties	33
4.3c	Regression	34
4.3d	Random sampling	35
4.3e	Applications	35

5	A DEPENDENCE MODEL	
5.1	Introduction	37
5.2	Properties	37
5.3	A method of fitting	38
5.4	Other applications	40
6	A REGRESSION MODEL	
6.1	Definition	44
6.2	Solutions	44
7	CANONICAL REPRESENTATIONS	
7.1	Introduction	48
7.2	A general expansion	48
7.3	Canonical form	49
7.4	Properties	52
7.5	Applications	54
8	CONTINGENCY-TYPE DISTRIBUTIONS	
8.1	Definition	55
8.2	Properties	57
8.2a	Distributional properties	57
8.2b	Relation to other families	59
8.2c	The inverse of $K$ with applications	59
8.3	The C-type uniform distribution	60
8.4	The C-type normal distribution	62
8.5	Estimation of $\psi$	63
8.5a	The maximum likelihood estimator	63
8.5b	The cross-ratio	63
8.5c	An efficient estimator	65
8.6	Methods of fitting	66
8.7	Other applications	72
9	TRIVARIATE REDUCTION AND OTHER METHODS	
9.1	Trivariate reduction	74
9.2	One-parameter families	76
9.3	Bivariate exponential-type distributions	78

<i>Chapter</i>	<i>Page</i>
9.4 Mixtures	79
9.5 A totally symmetrical class	80
9.6 Concluding remarks	80
10 SOME IMPORTANT BIVARIATE DISTRIBUTIONS	
10.1 The bivariate binomial distribution	82
10.2 The bivariate hypergeometric distribution	82
10.3 The bivariate Poisson distribution	83
10.4 The bivariate negative binomial distribution	84
10.5 The bivariate logarithmic distribution	84
10.6 The bivariate normal distribution	85
10.7 Bivariate uniform distributions	85
10.8 The bivariate Cauchy distribution	86
10.9 The bivariate beta distribution	87
10.10 Bivariate gamma distributions	88
10.11 Bivariate exponential distributions	90
10.12 The bivariate Pareto distribution	91
10.13 The bivariate Student distribution	92
10.14 The bivariate $F$ -distribution	92
10.15 The bivariate Type II distribution	93
10.16 Rhodes' distribution	94
