Abstract									
1	Intr	oducti	ion	1					
	1.1	Objec	tives of the Work	. 1					
	1.2	1.2 Background of Testing and Simulation in the Automotive Industr		. 1					
	1.3	Basics	s of Steering	. 2					
		1.3.1	The Steering System	. 2					
		1.3.2	The Kingpin Axis and Mechanical Trail	. 6					
	-	1.3.3	Forces at the Tyre Relevant to Steering	. 6					
	1.4	Steerin	ng Feel and Quality	. 7					
	1.5	The S	cope of the Project	. 9					
2	Hypothesis 10								
	2.1	Vehicl	e Control Quality and Steering Feel	. 10					
	2.2	Inform	nation, Predictability and Steering feel	. 12					
		2.2.1	Tyre Information	. 13					
	2.3	Learna	ability	. 14					
	2.4	Consolidation and boundaries of the Hypothesis							
	2.5	Vehicl	e Control Quality Experiment	. 16					
	2.6	Summ	nary	. 17					
3	Lite	erature	e and Previous Work	18					
	3.1	Existi	ng Objective Characteristics of Steering Systems	. 18					
	3.2	.2 Literature							
		3.2.1	Straight-Line Running and On-Centre Handling	. 19					
		3.2.2	Vchicle Handling and Steering Quality	. 21					
		3.2.3	Steering Feel	. 22					
		3.2.4	Simulation	. 23					

CONTENTS

4	Testing			25		
	4.1	Introd	uction	25		
	4.2	Vehicl	e Objective Testing	25		
		4.2.1	Design of Experiment	25		
		4.2.2	Consistency Principles	26		
		4.2.3	Altering the Vchicle's Properties by Parameter Variation	27		
		4.2.4	Manœuvres and Tests	30		
		4.2.5	Quantities Measured	34		
		4.2.6	Processing of Test Results	35		
	4.3	Comp	onent Testing	42		
		4.3.1	Elastic Disc Element	42		
		4.3.2	Steering Column Friction	43		
		4.3.3	Steering Rack Friction	43		
		4.3.4	Power Steering Valve Characteristics	44		
		4.3.5	Introducing Play into the System	45		
	4.4	Vehicle	e Objective Testing - Results	45		
		4.4.1	Effect of Extra Compliance	45		
		4.4.2	Effect of Extra Column Friction	54		
		4.4.3	Effect of Extra Rack Friction	61		
		4.4.4	Effect of Extra Power Assistance	67		
		4.4.5	Effect of Extra Free Play	74		
	4.5	Subjec	ctive Testing	79		
		4.5.1	Principles Governing the Subjective Testing	79		
		4.5.2	Format of Testing	80		
		4.5.3	Questionnaire for Subjective Ratings	80		
		4.5.4	Subjective Results	80		
5	Simulation					
5	5.1					
	0.1	511	The Need for Simulation	88		
		519	Simulation Method	88		
	59	Model		80		
	0.2	5.2.1	Vehicle Model	89		
		522	Steering Model	92		
		523	Tyre Forces	95		
		5.2.0	Integration of the Models	96		
		525	Simulating the Manœuvres	96		
	5.3	Simula	ation Results	97		
	5.5	5.3.1	Weave Test Simulation	98		
		5.3.2	Transition Test Simulation	104		
		5.3.3	Stationary Circle Test Simulation	113		
		0.3.3	Stationary Circle Test Simulation	113		

CONTENTS

7.

6	Discussion and Analysis		118		
	6.1	The Hypothesis	118		
	6.2	Contribution of Testing	119		
	6.3	Contribution of Simulation	126		
	6.4	Correlation of Subjective and Objective Results	138		
7	Conclusion				
	7.1	Conclusions	158		
	7.2	Application to Vehicle Design and Engineering	160		
A	Appendix 16				
	A.1	Test Vehicle Measurement Configuration	165		
	A.2	Inertial Effects	167		
	A.3	Steering Control	168
