Contents

Introduction: why study chromosomes?	ix
1 Chromatin structure and replication	1
1.1 Chromosome structure	2
1.2 Evidence that DNA is the genetic material	4
1.3 The double helix	5
1.4 The genetic code	8
1.5 DNA constitution	9
1.6 Higher order structure of DNA	12
1.7 Chromosome replication	20
2 Chromosome form and function	27
2.1 Structures in a chromosome	27
2.2 Heterochromatin	29
2.3 Telomeres	34
2.4 Centromeres and kinetochores	41
2.5 Nucleolar organizing regions	49
2.6 Lampbrush and polytene chromosomes	53
2.7 Double minutes and homogeneously staining regions	58
2.8 B chromosomes	61
2.9 Supernumerary segments	65
2.10 Artificial chromosomes	67
3 Chromosome identification	72
3.1 The karyotype	73
3.2 Chromosome banding	75
4 Nuclear division	94
4.1 Mitosis	95
4.2 The spindle apparatus	98
4.3 Meiosis	101
4.4 Chromosome pairing	109
4.5 Synaptonemal complex formation	113

4.6	Recombination nodules	115
4.7	Recombination and gene conversion	117
4.8	Meiosis in polyploids and structural rearrangements	120
4.9	Structural changes	125
5	Gene control by position and origin	133
5.1	Chromosome organization within the nucleus	133
5.2	Chromosomal imprinting	139
6	Mutagenesis	147
6.1	General ideas about mutagenesis	147
6.2	Changes associated with the environment	150
6.3	Chromosomal aberrations	152
6.4	Aneuploidies	157
6.5	Mutations affecting cell proliferation	160
6.6	Translocations	161
6.7	Fragile sites	168
6.8	Transposable elements	171
7	Chromosome mapping	176
7.1	Introduction	177
7.2	Genetic maps	178
7.3	Cytological maps	189
7.4	Correlation between genetic and cytological/physical maps	198
7.5	Mapping strategies	199
8	Sex chromosome systems	206
8.1	Heteromorphic sex chromosome systems	206
8.2	Mammalian sex chromosome systems	212
8.3	X inactivation	215
8.4	Mammalian sex chromosome evolution	220
8.5	Other sex chromosome systems	223
9	Evolution and speciation	237
9.1	Hybrids and cultivars	238
9.2	Speciation by karyotype changes	243
9.3	Speciation in an ancient mammalian group	246
9.4	Evolution of the hominids	254
10	Artificial manipulation of genomes	258
10.1	Manipulation of whole chromosome sets	259
10.2	Manipulation of single chromosomes	269

10.3	Manipulation producing variable genome changes	271
10.4	Single-gene transfer	282
11	Historical aspects of cytogenetics	289
	Bibliography	303
	Index	331
