Preface	vii
<b>1 Introduction to Latent Variables</b>	<b>1</b>
1.1 General Introduction	1
1.2 An Elementary Latent Variable Model	2
1.3 Other Latent Variable Models	5
1.4 Some Examples	16
Exercises	19
<b>2 Canonical Models</b>	<b>21</b>
2.1 Introduction and Specification of Models	21
2.2 Price Rigidity and Price Adjustment	24
2.3 Estimation of Models by Maximum Likelihood	27
2.4 Unbounded Likelihood Functions	35
2.5 The Possibility of False Maxima	40
2.6 Minimum Distance Methods of Estimation	42
2.7 The EM Algorithm	50
2.8 The Probabilities of Excess Demand	58
Exercises	59
Appendix 2.A FORTRAN Program for the Likelihood Function of Model A	61
Appendix 2.B FORTRAN Program for the Likelihood Function of Model D	68
Appendix 2.C Likelihood Function for Model D	70
<b>3 Equilibrium, Disequilibrium, and Testing</b>	<b>71</b>
3.1 Introduction	71
3.2 The Case of Controlled Prices	72
3.3 Endogenous Switching Between Equilibrium and Disequilibrium	76
3.4 Testing for Equilibrium	80

iv	Contents	
3.5	The Problem of All-Excess-Demand: Estimability	90
3.6	The Problem of All-Excess-Demand: Testing	95
	Exercises	103
Appendix 3.A	The Conditional Expectation in a Joint Normal Density	104
Appendix 3.B	Recursive Residuals	105
<b>4</b>	<b>Alternative Specifications</b>	<b>109</b>
4.1	Introduction	109
4.2	The Ginsburgh-Tishler-Zang Model	109
4.3	Models in Which Rationing Affects Demand or Supply	117
4.4	The Problem of Aggregation	119
4.5	Disequilibrium as Partial Adjustment	130
4.6	Serial Correlation of Error Terms and Lagged Dependent Variables	132
4.7	Testing for First-Order Serial Correlation	140
4.8	Models with Rational Expectations	145
4.9	A Rationing Model with a Policy Variable	147
	Exercises	152
Appendix 4.A	FORTRAN Program for the Likelihood Function of the Ginsburgh-Tishler-Zang Model	153
Appendix 4.B	FORTRAN Program for Solving (4.3.4) by False Position Method	154
Appendix 4.C	Results of Sampling Experiments	156
<b>5</b>	<b>Multimarket Models and Coherency</b>	<b>162</b>
5.1	Introduction	162
5.2	Effective Demands, Supplies, and Multimarket Systems	162
5.3	Introduction to the Problem of Coherency: Some Examples	174
5.4	Coherency Continued: Simultaneous Models	180
5.5	Uniqueness of the Solution and Ito's Contraction Mapping	186
5.6	Necessary and Sufficient Conditions for Coherency	191
	Exercises	196
<b>6</b>	<b>Estimation in Multimarket Models</b>	<b>198</b>
6.1	Introduction	198
6.2	Discrete Choice, Probit, Logit, and Tobit Models	198
6.3	Disequilibrium Models	202
6.4	Integration	212
6.5	A Non Normal Density	225
6.6	Models with Anticipatory Pricing	231
	Exercises	237

Appendix 6.A	FORTRAN Subroutines for Univariate Integration: NEWCT1, GAULG1, GAUS	239
Appendix 6.B	FORTRAN Subroutines for Bivariate Integration: GAULG2, BIV2D, CLARK2	241
Appendix 6.C	FORTRAN Subroutines for Trivariate Integration: GAULG3, DUTT3, TRINT, CLARK3	245
<b>7</b>	<b>Empirical Models of Disequilibrium</b>	<b>251</b>
7.1	Introduction	251
7.2	Labor Market Models	251
7.3	Models of Planned Economies	258
7.4	A Microeconomic Model of Marketing	264
7.5	A Two-Market Macromodel	266
7.6	A Model of Investment Goods	270
	Exercises	272
Appendix 7.A	Derivation of the Labor Market Likelihood Function	273
Appendix 7.B	Derivation of the Planned Economy Models' Likelihood Functions	275
References		279
Index		292
