CONTENTS

Preface to the Revised Edition xi

Preface xiii

Chapter I	A History of the Idea of Unobserved Components in the Analysis of Economic Time Series	
	1. Introduction	1
	2. Background	2
	3. Origins	2
	4. Nineteenth Century Contributors	6
	5. Recent Developments	11
	6. Application to Seasonal Adjustment and "Current Analysis"	16
	7. Application to the Historical Analysis of Business Cycles	18
Chapter II	Introduction to the Theory of Stationary Time Series	
	1. Introduction	22
	2. What Is a Stationary Time Series? Ergodicity	23
	3. The Wold Decomposition Theorem	30
Chapter III	The Spectral Representation and Its Estimation	
	1. Introduction	37
	2. Covariance Generating Functions	37
	3. The Spectral Representation of a Stationary Time Series	43

4. The Cross-Spectral Distribution Function of Two Jointly Stationary Time Series and Filtering	53
5. Estimation of the Autocovariance Function and the Spectral Density Function	57

Chapter IV Formulation and Analysis of Unobserved-Components Models

1. Introduction	69
2. Unobserved-Components Models and Their Canonical Forms	70
3. Digression on a General Method for the Determination of the Autocovariances of a Mixed Moving-Average Autoregressive Process	78

Chapter V Elements of the Theory of Prediction and Extraction

1. Introduction	86
2. Prediction	86
3. Examples of the Application of Minimum-Mean-Square-Error Forecasts	89
4. Signal Extraction	97
5. Examples of Minimum-Mean-Square-Error Signal Extraction	98

Chapter VI Formulation of Unobserved-Components Models and Canonical Forms

1. Introduction	103
2. Determining the Form of a Univariate Time-Series ARMA Model	104
3. Determining the Form of a Univariate Time-Series Unobserved-Components Model	109
4. The Analysis of a Time Series by More Than Its Own Past	115

Chapter VII Estimation of Unobserved-Components and Canonical Models

1. Introduction	120
2. ARMA Model Estimation in the Time Domain	121
3. UC Model Estimation in the Time Domain	125
4. ARMA Model Estimation in the Frequency Domain	132
5. Unobserved-Components Model Estimation in the Frequency Domain	137
6. Hypothesis Testing	139
7. Estimation of Multiple Time-Series Models	139

Chapter VIII	Appraisal of Seasonal Adjustment Techniques	
	1. Criteria for "Optimal" Seasonal Adjustment	147
	2. Choice of Models	154
	3. Some Results	156
	4. Seasonal Adjustment and the Estimation of Structural Models	162
	5. Conclusion	170
Chapter IX	On the Comparative Structure of Serial Dependence in Some U.S. Price Series	
	1. Introduction	172
	2. Brief Characterization of Selected Nonindustrial Price Series of the Bureau of Labor Statistics	175
	3. Buyer's Prices and Seller's Prices: The National Bureau of Economic Research Series and the Stigler-Kindahl Study	181
	4. Conclusions	200
Chapter X	Formulation and Estimation of Mixed Moving-Average Autoregressive Models for Single Time Series: Examples	
	1. Introduction	201
	2. The Formulation Procedure of Box and Jenkins	202
	3. An Alternative Method for the Formulation of an ARIMA Model	205
	4. The Detailed Examples	208
	5. Comparison between Estimation Methods in the Frequency and Time Domains	219
Chapter XI	Formulation and Estimation of Multivariate Mixed Moving-Average Autoregressive Time-Series Models	
	1. Introduction	229
	2. A Single-Equation Approach	230
	3. A Simultaneous-Equations Approach	238
	4. Estimation of Multiple Time-Series Models for Interrelated Agricultural Prices	242
	5. Testing and Checking the Multiple Time-Series Models for Interrelated Agricultural Prices	257
Chapter XII	Formulation and Estimation of Unobserved-Components Models: Examples	
	1. Introduction	261
	2. Formulation of the Models: Trend Reduction	262

	3. Estimation of the Models in Time and Frequency Domains	270
	4. Predictive Properties of Unobserved-Components Models	284
Chapter XIII	Application to the Formulation of Distributed-Lag Models	
	1. Introduction	291
	2. Prediction and Expectation-Formation Models	294
	3. Signal Extraction	308
	4. Distributed Lags in Dynamic Models	311
	5. Estimation	320
Chapter XIV	A Time-Series Model of the U.S. Cattle Industry	
	1. Introduction	327
	2. The Cattle Industry	328
	3. Cattleman Behavior: A Simple Example	329
	4. Cattleman Behavior: A Quarterly Model	337
	5. Tests of the Model with Quasi-Rational Expectations	348
Appendix A	The Work of Buys Ballot	354
Appendix B	Some Requisite Theory of Functions of a Complex Variable	
	1. Complex Numbers	361
	2. Simple Functions of a Complex Variable	364
	3. Limits, Continuity, Derivatives, Singularities, and Rational Functions	367
	4. Complex Integration: Cauchy's Theorem	369
	5. Series Expansions; Taylor's Series; Laurent's Series	373
	6. The Residue Theorem and Its Applications	376
Appendix C	Fourier Series and Analysis	
	1. Introduction	380
	2. Periodic Functions and Trigonometric Series of a Periodic Function	381
	3. Orthogonal System of Functions	388
	4. Questions of Convergence and Goodness of Approximation	393
	5. Fourier Transforms and "Windows"	404
Appendix D	Whittle's Theorem	413
Appendix E	Inversion of Tridiagonal Matrices and a Method for Inverting Toeplitz Matrices	416

Contents	<i>ix</i>
Appendix F Spectral Densities, Actual and Theoretical, Eight Series	422
Appendix G Derivation of a Distributed-Lag Relation between Sales and Production: A Simple Example	431
References	437
<i>Author Index</i>	449
<i>Subject Index</i>	453
