Linear Multiobjective Programming

Fachbereich Mathematik
Technische Hochschule Darmstadt

Inv.-Nr. B 13406

Springer-Verlag
Berlin · Heidelberg · New York 1974

Table of Contents

1.	Introduction	1
1.1	The Origin of the Multiobjective Problem and a Short Historical Review	1
1.2.	Linear Multiobjective Programming	4
1.3.	Comment on Notation	5
	LINEAR MULTIOBJECTIVE PROGRAMMING I.	
2.	Basic Theory and Decomposition of the Parametric Space	8
2.1.	Basic Theory - Linear Case	10
2.2.	Reduction of the Dimensionality of the Parametric Space	14
2.3.	Decomposition of the Parametric Space as a Method to Find Nondominated Extreme Points of X	15
2.4.	Algorithmic Possibilities	29
2.5.	Discussion of Difficulties connected with the Decomposition Method	40
2.5.1.	Some Numerical Examples of the Difficulties	42
	LINEAR MULTIOBJECTIVE PROGRAMMING II.	
3.	Finding Nondominated Extreme Points - A Second Approach (Multicriteria Simplex Method)	63
3.1.	Basic Theorems	63
3.2.	Methods for Generating Adjacent Extreme Points	80
3.3	Computerized Procedure - An Example	93
3.4.	Computer Analysis	114

LINEAR MULTIOBJECTIVE PROGRAMMING III.

4.	A Method for Generating All Nondominated Solutions of X.	122
4.1.	Some Basic Theorems on Properties of N	122
4.2.	An Algorithm for Generating N from Known N_{ex}	126
4.3.	Numerical Examples	136
4.3.1.	An Example of Matrix Reduction	136
4.3.2.	An Example of Nondominance Subroutine	141
5.	Additional Topics and Extensions	146
5.1.	Alternative Approach to Finding N_{ex}	146
5.1.1.	The Concept of Cutting Hyperplane	149
5.1.2.	Nondominance in Lower Dimensions	158
5.2.	Some Notes on Nonlinearity	162
5.3.	A Selection of the Final Solution	167
5.3.1.	Direct Assessment of Weights	169
5.3.2.	The Ideal Solution	171
5.3.3.	Entropy as a Measure of Importance	176
5.3.4.	A Method of Displaced Ideal	180
	Bibliography	183
	Appendix:	186
A1.	A Note on Elimination of Redundant Constraints	187
A2.	Examples of Output Printouts	197
A3.	The Program Description and FORTRAN Printout	202
