Contents

Preface XIII

Part I The linear theory of shells 1

1 *Geometry of surfaces* 3

1.1 Geometric relations for surfaces 3
1.2 Lines of curvature 12
1.3 Surfaces of revolution 16
1.4 Parallel surfaces 22
1.5 Small deformations of a surface 24

2 *The linear theory of transversely rigid shells* 31

2.1 Fundamental definitions 31
2.2 Equations of three-dimensional elasticity 32
2.3 Assumptions of shell theory 37
2.4 Displacements and strains 39
2.5 Stress resultants and equilibrium equations 42
2.6 Statically equivalent force systems 47
2.7 Overall force–strain relations 51
2.8 The principle of virtual work and boundary conditions . 53
2.9 Strain energy and the principle of minimum potential energy 60
2.10 Stress functions 63
2.11 Transverse shear and normal stresses 65

Appendix

Boundary conditions at edges which are not lines of curvature 70

3 *Simplifications of shell theory* 77

3.1 Modification of overall force–strain relationships . . . 77
3.2 Internal stress distribution 80
3.3 Approximate reduction of shell theory: Vlasov's equations 83
3.4 Shallow shells 90
3.5 Exact reduction of shell theory for zero Poisson's ratio . . 94
(I) Complex stress resultants 94
3.6 Exact reduction of shell theory for zero Poisson's ratio . 98
(II) Complex displacements 98
3.7 Approximate reduction of shell theory for nonzero Poisson's ratio 101
3.8 The membrane theory of shells 106
3.9 Transformation of the equations of membrane theory . . 110

Part II Axisymmetric deformations of shells of revolution 115

4 *The cylindrical shell* 117

4.1 General relations for cylindrical shells 117
4.2 Edge-loaded cylindrical shells 124
(a) Semi-infinite cylinder 124
(b) Symmetrically loaded finite cylinder 126
(c) Antisymmetrically loaded finite cylinder 129
(d) Finite cylinder loaded at one edge 130
4.3 Particular integrals for surface-loaded cylindrical shells . 134
4.4 Some solutions of cylindrical shell problems 139
(a) Compressed cylinder with rigid end rings 139
(b) Pressurized cylinder with rigid movable end plates . 141
(c) Effect of restraint of longitudinal movement . . . 143
(d) Effect of end plate flexibility 146
4.5 Pressurized cylinder with an abrupt thickness change . . 150
4.6 Cylinder in a rigid collar 158

5 *The conical shell* 165

5.1 General relations for conical shells 165
5.2 Solution of the homogeneous deflection equation . . . 169

5.3 Edge-loaded conical shells 180
(a) Semi-infinite cones 180
(b) Complete cones 186
(c) Finite conical frustums 191
5.4 Particular solutions of the conical shell equations . . . 202
5.5 Complete conical shell subjected to external pressure . . 205

6 *The spherical shell* 213
6.1 General relations for spherical shells 213
6.2 A particular solution of the bending equations 219
6.3 Some relations for the complementary solution 221
6.4 Solutions by means of Legendre functions 223
6.5 Shallow spherical shells 227
6.6 Closed spherical cap under edge loading 229
6.7 Tangent cone approximation 236
6.8 Particular solutions for spherical shells 240
6.9 Complete sphere subjected to internal or external pressure. 244
6.10 Spherical shell with concentrated loads at the poles . . . 247
6.11 Spherical cap loaded at the apex 253
6.12 Effect of method of load application 258

7 *Shells of arbitrary meridian* 267
7.1 General equations for arbitrary shells of revolution . . . 267
7.2 An approximate complementary solution of the bending equations 272
7.3 The variable ξ 278
7.4 Approximate complementary solutions valid at points with horizontal tangents 293
7.4.1 The ellipsoidal shell. 294
7.4.2 The circular toroidal shell 298
7.5 Membrane theory as a particular solution of the bending equations 307
7.6 Some particular solutions for circular toroidal shells . . 308

8 *Torsion and circumferential bending of shells of revolution* . . . 319
8.1 Torsion of shells of revolution 319
8.2 Circumferential bending of shells of revolution 324

Part III Asymmetrically loaded shells 331

9 *Asymmetric deformations of spherical shells* 333

9.1 General relations for asymmetrically loaded spherical shells 333
9.2 'Wind' loading of spherical shells 339
9.3 Edge-loaded spherical shells: inextensional deformations and membrane stress states 342
9.4 Complex variable representation of membrane stress states 352
9.5 Edge-loaded spherical shells: mixed bending–stretching solutions 361
9.6 Bending of a spherical shell by moments at the poles: exact solution 374
9.7 Bending of a spherical shell by moments at the poles: shallow shell theory 378
9.8 Bending of a spherical shell by tangential loads 388
9.9 Some other problems of edge-loaded spherical shells . . 397
9.10 Surface-loaded spherical shells 404

10 *Asymmetric deformations of circular cylindrical shells* . . . 409

10.1 General relations for cylindrical shells 409
10.2 Simplifications of the equations for radial and edge loading 413
10.3 Cylinders loaded along circular edges 415
10.4 End-loaded cantilevered cylinder with a rigid end ring . . 430
10.5 Infinite cylindrical shell loaded by diametrically opposed concentrated loads 437
10.6 Results for some other concentrated loads 445
10.7 Particular solutions for complete cylindrical shells . . . 447
10.8 Edge-loaded cylindrical strips 452
10.9 Infinite cylindrical strips 462
10.10 Stress concentration around holes 463
10.10.1 Effect of a hole on a circular cylinder under uniform tension 470

11 *Results for other shells* 477

11.1 'Wind' loading of arbitrary shells of revolution 477
11.2 Conical frustums subjected to end loads 487

11.3 Numerical solution of the bending equations for shells of revolution 492
11.4 Shallow translational shells 504
11.5 Finite element analysis of shells of arbitrary middle surface 510

12 *Nonuniform anisotropic shells* 525

12.1 Necessity for modifications of the theory of shells . . . 525
12.2 Effect of thermal loading 526
12.3 Effect of nonuniform wall thickness 530
12.3.1 Derivation of equations for shells of nonuniform wall thickness 530
12.3.2 Axisymmetric deformations of nonuniformly thick shells of revolution 533
12.3.3 Cylindrical shell of linearly varying thickness . . 537
12.3.4 Conical shell of linearly varying thickness . . . 544
12.4 Effects of anisotropy 551
12.5 Layered shells 555
12.6 Stiffened shells 560

Part IV Dynamics of shells 565

13 *Free vibrations of shells* 567

13.1 Equations of motion 567
13.2 Free harmonic vibrations 570
13.3 Orthogonality conditions for vibration mode shapes . . 573
13.4 Free vibrations of cylindrical shells 576
13.4.1 Simply supported cylindrical shells 578
13.4.2 Minimum frequency of vibration 589
13.4.3 Effects of other edge conditions 594
13.5 Free vibrations of spherical shells 598
13.5.1 Vibrations of spherical shell segments 602
13.5.2 Torsional vibrations of spherical caps 607
13.5.3 Approximate solutions for shallow spherical caps . 610
13.5.4 Vibrations of complete spherical shells 615
13.6 Vibration characteristics of conical shells 620

14 *Response of shells to dynamic loading* 629

14.1 Solution of initial value problems 629
14.2 Solution of problems involving time-dependent surface or edge loading 631
14.3 Periodic surface and edge forces 633
14.4 Solution of problems involving time-dependent edge displacements 634
14.5 Some examples of modal analysis 636
14.6 Other methods of solution of shell response problems . . 641
