Lengdorf

Nr. 730

Spatial Dynamics of Pushbelt CVTs

Technische Universität Darmstadt
FG Fahrzeugtechnik

Inventarnummer:
1929

VDI verlag

Contents

1	Point of Departure	1
1.1	Pushbelt CVTs	1
1.1.1	Set Up and Functionality	2
1.1.2	Important Phenomena	3
1.1.3	Simulation Models	5
1.2	Nonsmooth Multibody Systems	5
1.2.1	Measure Differential Equation	6
1.2.2	Contact Laws	7
1.2.3	Contour Description	8
1.3	Integration Schemes	9
1.3.1	Event-Driven Integration Schemes	9
1.3.2	Time-Stepping Integration Schemes	10
1.4	MBSim	11
2	Model of the Pushbelt CVT	13
2.1	Bodies	13
2.1.1	Elements	14
2.1.2	Ring Packages	19
2.1.3	Pulleys	27
2.2	Interactions	33
2.2.1	Pulley - Environment Interaction	33
2.2.2	Sheave - Sheave Joint	34
2.2.3	Element - Pulley Contacts	34
2.2.4	Element - Ring Package Contacts	43
2.2.5	Element - Element Contacts	45
2.3	Assembling and Initialisation	47
2.3.1	Kinematics	47
2.3.2	Kinetics	48
2.3.3	Pulleys	55
2.3.4	Ring Packages	57
2.3.5	Elements	60
2.4	Summary	62
2.5	CPU Time Reduction	62
2.5.1	Stabilisation of the Ring Package	63
2.5.2	Parallel Computing Architectures	65
2.5.3	Practical Evaluations and Experiences	67
3	Results and Validation	72
3.1	Planar Validation with Local Data	72
3.1.1	Element - Pulley Contacts	73
3.1.2	Element - Ring Package Contacts	75

3.1.3	Element – Element Contacts	77
3.2	Spatial Validation with Global Data	78
3.2.1	Thrust Ratio	78
3.2.2	Spiral Running	78
3.2.3	Alignment Setting	80
4	Conclusion	83
	Bibliography	85
