Hydraulics for Civil Engineers

Peter Wynn
formerly senior lecturer in civil engineering, Anglia Ruskin University

Contents

	Preface	vii
	List of symbols	ix
01	**Pressure in liquids: its effects and measurement**	**1**
	1.1. Introduction	1
	1.2. Density and pressure within a liquid	1
	1.3. Measurement of pressure	3
	1.4. Forces on immersed surfaces	5
	1.5. Buoyancy and flotation	12
	References	17
02	**Conservation equations applied to flow of liquid in pipes**	**19**
	2.1. Introduction	19
	2.2. Continuity equation	20
	2.3. Momentum equation	21
	2.4. Bernoulli (or Energy) equation	26
	Reference	34
03	**Real flow in pipes**	**35**
	3.1. Introduction	35
	3.2. Viscosity of fluids	35
	3.3. Laminar and turbulent flow	37
	3.4. Modification of Bernoulli equation for head loss due to friction	39
	3.5. Boundary layers in turbulent flow	44
	3.6. Derivation of λ values and use in design charts	44
	References	50
	Further reading	51
04	**Turbines and pumps**	**53**
	4.1. Introduction	53
	4.2. Turbines	53
	4.3. Pumps	59
	4.4. Cavitation in turbines and pumps	63
	References	63
	Further reading	64
05	**Steady uniform flow in open channels**	**65**
	5.1. Introduction	65
	5.2. Sustainable design of river channels	65
	5.3. Basic definitions	67
	5.4. Discharge equations	70
	5.5. Velocity variation over channel cross-section	74
	5.6. Most economically efficient section	74
	5.7. Specific energy	76
	References	81
	Further reading	82
06	**Open channel flow with varying conditions**	**83**
	6.1. Changes to flow regime	83
	6.2. Examples of flow changes	87
	6.3. Flow rate measurement based on changes in section	96
	6.4. Gradually varied flow	99
	References	103

07 **Hydrology of river flow** **105**
7.1. Introduction 105
7.2. Return period approach 105
7.3. Hydrograph approach 111
References 116

08 **Hydrology of surface water drainage** **119**
8.1. Introduction 119
8.2. Short duration rainfall intensity 119
8.3. Hydraulic design of surface water sewers 121
8.4. Sustainable drainage systems 128
8.5. Difference between greenfield and development runoff 131
References 133
Further reading 133

09 **Coastal hydraulics** **135**
9.1. Introduction 135
9.2. Sea level records 135
9.3. Mean sea level 136
9.4. Astronomical tides 136
9.5. Meteorological effects, including surges 138
9.6. Waves 141
References 152
Further reading 152

10 **Dimensional analysis** **153**
10.1. Introduction 153
10.2. Dimensions 153
10.3. Dimensional equations 154
10.4. Dimensional analysis 156
10.5. Similarity 159
10.6. Use of dimensionless numbers in model scaling 160
References 164
Further reading 164

11 **Two-dimensional ideal flow** **165**
11.1. Introduction 165
11.2. Theoretical basis 165
11.3. Uniform straight line flow 176
11.4. Sources 177
11.5. Sinks 179
11.6. Free vortex 179
11.7. Forced vortex 183
11.8. Combination of flow 185
References 188

Index **189**
