Contents

<u>PART I. THE DIAZOTROPHS</u>	1
Chapter 1 <u>Recognition</u>	3
I. Historical Roots.....	3
A. The Agricultural Imperative.....	3
B. Early Experimentation.....	3
II. Detection of Diazotrophs and Nitrogenase.....	7
A. $^{15}\text{N}_2$ Method.....	9
B. Ammonia and Manometric Methods.....	10
C. Acetylene Reduction Method.....	10
D. Other Methods.....	12
Chapter 2 <u>Description and Classification of Diazotrophs</u>	14
I. Free-Living Diazotrophs.....	18
A. Taxonomy and Characteristics.....	18
1. Bacteria.....	18
2. Blue-Green Algae.....	23
B. Associative Symbioses.....	25
1. Loose Associations.....	26
a) Interactions Among Microorganisms.....	26
b) Phylloplane.....	26
c) Rhizosphere.....	26
2. Associations Involving Morphological Modification or Accommodation.....	27
3. Associations with Animals.....	28
II. Obligatory Symbioses.....	28
A. Non-Legume Angiosperms.....	28
B. Legumes.....	30
1. <i>Rhizobia</i>	31
2. Establishment of an Effective Legume Sym- biosis.....	32
3. Tissue Culture Symbiosis.....	38
Concluding Remarks	38
Chapter 3 <u>Perspectives</u>	39
I. Evolution.....	39
A. N_2 Fixation in Free-Living Organisms.....	39
B. N_2 Fixation in Symbioses.....	42
II. Role of Diazotrophs in Global Nitrogen Economy... ..	43
A. Nitrogen Cycle.....	43
1. Nitrogen Sinks.....	45
2. Nitrogen Transformations and Transfers.....	46
a) Soil-Water Pool.....	47
b) Atmosphere.....	52
Concluding Remarks	53

B. Amount of N ₂ Fixed.....	53
1. N ₂ Fixation Rates in Various Ecosystems....	54
a) Cultivated Land.....	57
b) Forests and Grasslands.....	57
c) Unused Land.....	58
d) Marine.....	59
2. Comparison with Previous Estimates.....	60
<u>PART II. BIOCHEMISTRY AND BIOPHYSICS.....</u>	<u>61</u>
Chapter 4 <u>An Equation for the Nitrogenase Reaction.....</u>	65
I. The <i>Clostridium</i> -Pyruvate N ₂ -Fixing System	66
II. ATP.....	67
III. <i>Azotobacter</i> Nitrogenase and Dithionite.....	69
IV. H ₂ Evolution and ATP Hydrolysis: Nitrogenase Activity without N ₂	70
V. Alternate Substrates for Nitrogenase.....	71
VI. H ₂ , N ₂ , Hydrogenase and Nitrogenase - A Special Relationship?	72
Chapter 5 <u>Nitrogenase: The Catalyst.....</u>	74
I. Procurement.....	74
A. Factors Affecting Nitrogenase Biosynthesis... ..	74
1. Genetic Basis.....	74
2. Culture Conditions.....	76
a) Metabolic Control.....	76
b) General Considerations.....	78
B. Extraction and Purification of Nitrogenase... ..	79
II. Properties of Mo-Fe Protein and Fe Protein.....	82
A. Nitrogenase Proteins of Various Diazotrophs.. ..	82
1. <i>Azotobacter vinelandii</i>	82
a) Mo-Fe Protein.....	82
b) Fe Protein.....	89
2. <i>Clostridium pasteurianum</i>	90
a) Mo-Fe Protein.....	90
b) Fe Protein.....	91
3. <i>Klebsiella pneumoniae</i>	92
a) Mo-Fe Protein.....	93
b) Fe Protein.....	94
4. <i>Azotobacter chroococcum</i>	95
5. <i>Mycobacterium flavum</i>	95
6. <i>Chloropseudomonas ethylicum</i>	95
7. Soybean Bacteroids.....	95
B. Summary of Characteristics of the Nitrogen- ase Proteins.....	96
1. Mo-Fe Protein.....	96
2. Fe Protein.....	97
III. Properties of Nitrogenase.....	98
A. The Question of Nitrogenase Composition.....	98
B. Physical-Chemical Characteristics of Nitro- genase.....	100
C. Stability of Nitrogenase.....	101
1. O ₂ Sensitivity.....	102
2. Cold Lability.....	104
D. Integrity of Reconstituted Nitrogenases.....	105

Chapter 6	Nitrogenase: The Catalysis.....	106
I.	Nitrogenase Turnover.....	106
	A. Enzyme Concentration and Composition.....	107
	B. ATP.....	108
	1. ATP and Reaction Rate.....	109
	a) Relationship of ATP, Enzyme Concentration and Activity	109
	b) Michaelis Constant.....	110
	c) ADP and Salt Inhibition.....	113
	2. The ATP:2-Electron Ratio.....	114
	3. Reductant-Independent ATP Hydrolysis.....	116
	4. Other ATP Effects.....	117
	C. Dithionite.....	117
	D. External Factors.....	118
	1. pH.....	118
	2. Temperature.....	119
	3. Inhibitors.....	120
II.	Substrate Reduction.....	121
	A. Electron Allocation: H_3O^+ vs. Exogenous Reducible Substrate.....	121
	B. Specificity and Inhibition.....	122
	C. The Reducible Substrates.....	126
	1. N_2	126
	2. Azide.....	127
	3. N_2O	127
	4. Nitriles.....	127
	a) Cyanide.....	128
	b) Alkyl Cyanides.....	128
	c) Alkenyl Cyanides.....	128
	5. Isonitriles.....	130
	6. Alkynes.....	132
	Concluding Remarks on Substrate Reduction.....	132
Chapter 7	Mechanism.....	133
I.	A Model for the Formation of Catalytically Active Species.....	133
	A. Protein and Ligand Complexes of the Model....	137
	1. Fe Protein·ATP·Mg Complex.....	137
	2. Mo-Fe·Protein·Fe Protein Complexes.....	137
	B. Reactivity of the Model.....	138
	1. Dilution Effect.....	138
	a) The Need for 2 Fe Proteins.....	138
	b) Effect of ATP Concentration.....	138
	c) ADP and Salt Effects.....	139
	2. ATP Hydrolysis.....	139
	3. Nature of ATP Saturation Curves and Reciprocal Plots for K_m (ATP) Evaluation.....	139
	4. Reaction of ATP with the Mo-Fe Protein·Fe Protein Complexes.....	140
	C. Allosteric Implications.....	141
	D. The Mechanistic Enigmas of ATP Hydrolysis and Electron Transfer.....	141
II.	Reducible Substrate Complexation and Reduction..	142
	A. Locus of Active Site.....	142
	B. Role of Metals and Implications of Abiological Systems.....	143
	1. Nitriding Systems.....	143
	2. N_2 Complexes in Aprotic Media.....	144

3. Homogeneous Protonic Catalysis.....	147
C. Active Site Model and Reduction Sequence.....	147
Chapter 8 <u>Cellular Accommodation of Nitrogenase</u>	151
I. Localization of Nitrogenase.....	151
II. Electron-Donating Systems.....	152
A. <i>Clostridium pasteurianum</i>	154
B. <i>Azotobacter vinelandii</i>	155
C. <i>Azotobacter chroococcum</i>	155
D. <i>Mycobacterium flavum</i>	156
E. <i>Bacillus polymyxa</i>	156
F. <i>Chromatium</i>	156
G. <i>Chloropseudomonas ethylicum</i>	156
H. <i>Anabaena cylindrica</i>	157
I. Soybean Nodule Bacteroids.....	157
III. Ammonia Assimilation.....	159
IV. Other Enzymes and Proteins Associated with N ₂ Fixation.....	160
A. Hydrogenase.....	160
B. Leghemoglobin.....	164
C. Other Proteins.....	166
1. Cytochromes.....	166
2. Nitrate Reductase.....	167
