Electrical Engineers

Contents

Preface	ix
1 Expanding the role of fibre optics	1
1.1 Introduction	1
1.2 The principles	3
1.3 The practice	3
1.4 The possibilities	5
2 Principles of optical fibres	7
2.1 Introduction	7
2.2 Principles of optical fibre waveguides	8
2.3 Properties of optical fibres	12
2.3.1 Attenuation	12
2.3.2 Dispersion	15
2.3.3 Mechanical properties	16
2.4 Optical fibre components	18
2.5 Optical fibres – discussion	20
3 Optical sources for sensors and signal processing	23
3.1 Introduction	23
3.2 Source properties	24
3.2.1 Geometrical properties	24
3.2.2 Spectral properties of optical radiation	24
3.2.3 The electro-optic transfer characteristic	28
3.2.4 Environmental characteristics	28
3.2.5 Source parameters – discussion	29
3.3 Optical sources for fibre sensor and signal processing systems	29
3.3.1 Introduction: classification of sources	29
3.3.2 Incandescent sources	32
3.3.3 Gas laser sources	33
3.3.4 Solid state (crystal) lasers	35

3.3.5	Semiconductor light sources	36
3.3.5.1	Light-emitting diodes	37
3.3.5.2	Semiconductor laser diodes	39
3.4	Optical sources — discussion	49
4	Light detectors	50
4.1	Introduction	50
4.2	Semiconductor photodetectors	51
4.2.1	The PIN diode	51
4.2.2	The avalanche photodiode (APD)	55
4.2.3	The PIN-FET module	56
4.2.4	Photoconductors	57
4.2.5	Charge-coupled device array detectors	58
4.3	Photomultiplier tubes	59
4.4	Photodetection — discussion	61
5	Demodulation of light	62
5.1	Introduction	62
5.2	Intensity modulation	62
5.3	Detection of phase modulation	64
5.4	Detection of polarisation modulation	67
5.5	Detection of optical frequency modulation	70
5.6	Detection of colour modulation	71
5.7	Discussion	72
6	Intensity modulation transducers	73
6.1	Introduction	73
6.2	Modulation mechanisms	74
6.2.1	External modulation — masks and reflectors	74
6.2.2	Internal modulation — bending loss	78
6.2.3	Refractive index modulation sensors	80
6.2.4	Evanescent wave coupling sensors	83
6.3	Intensity modulation techniques	83
7	Phase modulated optical fibre sensors	87
7.1	Introduction	87
7.2	Phase modulation mechanisms in optical fibres	88
7.3	Optical fibre interferometers	96
7.4	Optical fibre phase sensors for mechanical variables	100
7.5	The optical fibre Sagnac interferometer	105
7.6	Optical fibre interferometric sensors — discussion	112
8	Frequency modulation in optical fibre sensors	113
8.1	Introduction	113

8.2	Optical fibre Doppler systems	115
8.3	Development of the basic concepts	120
8.4	Discussion	122
9	Wavelength distribution (colour) sensors	125
9.1	Introduction	125
9.2	Techniques for colour modulation	127
9.3	Colour probes — discussion	131
10	Polarisation modulation in fibre sensors	133
10.1	Introduction	133
10.1.1	Optical activity	133
10.1.2	Faraday rotation	134
10.1.3	Electrogyration	135
10.1.4	Electro-optic effect	135
10.1.5	Kerr effect	136
10.1.6	Photoelastic effect	136
10.2	Polarisation modulation sensors	139
10.3	Discussion	143
11	Résumé of fibre optic sensors	146
11.1	Introduction	146
11.2	General properties of optical modulation techniques	147
11.3	Concluding comments on fibre sensors	149
12	Optical fibres in signal processing	150
12.1	Introduction	150
12.2	Optical information processing systems	151
12.2.1	Spatial processors	151
12.2.2	Delay line processors	155
12.2.3	Digital processors	166
12.3	Discussion	169
13	Some speculations	170
13.1	Introductory discussion	170
13.2	Techniques and technologies	171
13.3	Optical fibre sensor systems	174
13.4	Optical fibre signal processing systems	182
13.5	Hybrid systems	184
13.6	Some final comments	186

Appendixes	188
Appendix 1 Geometrical optics	188
Appendix 2 Diffraction	190
Appendix 3 Coherence and interferometry	191
Appendix 4 Gaussian beam optics	197
Appendix 5 Polarisation phenomena	200
References	207
Index	219
