

**Development of a Continuous Single Chamber Vermicomposting Toilet with  
Urine Diversion for On-site Application.**

Vom Promotionsausschuss der  
Technischen Universität Hamburg-Harburg  
zur Erlangung des akademischen Grades

**Doktor-Ingenieur (Dr.-Ing.)**  
(Doctor of Engineering)

genehmigte Dissertation

von  
**Christopher Azaah Buzie-Fru**

aus  
Bamenda (Kamerun)

2010

## Table of Contents

<b>List of Tables</b> .....	<b>x</b>
<b>List of Figures</b> .....	<b>xi</b>
<b>1 Introduction</b> .....	<b>1</b>
1.1 General Perspectives .....	1
1.1.1 Current global sanitation situation .....	1
1.2 Approaches in wastewater management and sanitation .....	3
1.2.1 Off-site sanitation .....	3
1.2.1.1 Historical overview .....	3
1.2.1.2 Merits and limitations of off-site sanitation .....	3
1.2.2 On-site sanitation .....	5
1.3 New trends in Sustainable Sanitation.....	6
1.4 Ecological sanitation .....	7
1.4.1 Underlying principles of EcoSan .....	7
1.4.2 The necessity of ecological sanitation .....	8
1.4.3 Advances in Ecological sanitation .....	10
<b>2 Review of research issues</b> .....	<b>11</b>
2.1 Background - current practice and problems in human excreta management .....	11
2.2 Source separation of human waste .....	13
2.2.1 Physical, chemical and biological characteristics of faecal matter.....	13
2.2.2 The need for source-separation of human excreta .....	14
2.2.3 Source-separating systems .....	15
2.2.4 The need for linking sanitation and agriculture .....	17
2.2.5 Trends in faecal matter recycling.....	18
2.2.5.1 Existing conventional methods .....	18
2.2.5.1.1 Composting.....	18
2.2.5.1.2 Thermal treatment.....	19
2.2.5.1.3 Storage .....	21
2.2.5.1.4 Chemical treatment.....	21
2.2.5.1.5 Limitations of existing faecal matter treatment methods.....	22
2.3 Vermicomposting as a new trend in faecal matter management.....	23

2.3.1	Vermicomposting technology development .....	23
2.3.2	Need of vermicomposting for the management of human excreta .....	24
2.3.3	Vermicomposting versus Thermophilic Composting .....	25
2.3.4	Species selection for Vermicomposting .....	25
2.3.5	Scientific relationships and engineering aspects of vermicomposting .....	26
2.3.5.1	Scientific relationships .....	26
2.3.5.1.1	Temperature .....	26
2.3.5.1.2	Moisture .....	28
2.3.5.1.3	Ammonia and salt content .....	29
2.3.5.1.4	Carbon to nitrogen ratio .....	29
2.3.5.1.5	pH .....	29
2.3.5.1.6	Engineering aspects of vermicomposting .....	30
2.3.6	Practical systems of vermicomposting .....	31
2.3.6.1	Windrows .....	31
2.3.6.1.1	Static Pile windrows (batch) .....	31
2.3.6.1.2	Top-fed windrows-continuous flow .....	32
2.3.6.2	Single-batch reactors .....	32
2.3.6.3	Continuous flow systems .....	32
2.3.7	Physical, chemical and biological characteristics of vermicompost .....	33
2.4	Conclusion .....	34
2.5	Objective of the study .....	34
<b>3</b>	<b>Materials and Methods .....</b>	<b>36</b>
3.1	Material collection and pre-processing .....	36
3.1.1	Substrate origin and preparation .....	36
3.1.2	Earthworms .....	36
3.2	Continuous-flow vermicomposting units, experimental set-up and monitoring .....	36
3.2.1	Design of continuous flow reactors .....	36
3.2.2	Adaptation process and operation of continuous flow reactors .....	38
3.3	Experiments .....	39
3.3.1	Moisture requirement experiments .....	39
3.3.2	Loading rate experiment .....	39
3.3.3	Initial worm inoculation density experiment .....	40
3.3.4	Earthworm avoidance-response tests .....	40
3.3.5	Influence of vermicomposting on microbial populations .....	40

3.4	Chemical and microbiological analysis.....	41
3.4.1	Chemical analysis.....	41
3.4.2	Microbiological analysis.....	42
<b>4</b>	<b>Results and Discussion.....</b>	<b>44</b>
4.1	Moisture requirements.....	44
4.1.1	pH.....	45
4.1.2	Salt content.....	47
4.1.3	Volatile solids.....	49
4.1.4	Total organic carbon.....	52
4.1.5	Water extractable organic carbon.....	54
4.1.6	Water soluble ammonium.....	56
4.1.7	Water soluble nitrate.....	58
4.1.8	Water extractable phosphorus.....	61
4.1.9	Total Kjeldhal nitrogen (TKN).....	63
4.1.10	TC/TKN ratio in the solid phase.....	65
4.1.11	Evaluation of moisture experiments and concluding remarks.....	68
4.2	Effect of loading rate.....	69
4.2.1	pH.....	70
4.2.2	Volatile solids and total organic carbon.....	71
4.2.3	Water soluble organic carbon.....	72
4.2.4	Water-soluble ammonium-N and nitrate-N.....	73
4.2.5	Water soluble phosphorus (WSP) and potassium.....	75
4.2.6	Total Phosphorus.....	76
4.2.7	Vermicast production rate, mass balance analysis and characteristics of vermicast.....	77
4.2.7.1	Vermicast production rate.....	77
4.2.7.2	Mass balance analysis.....	78
4.2.7.3	Physical-chemical characteristics of vermicompost.....	78
4.2.8	Assessment of the effect of loading rate.....	80
4.3	Worm Introduction Density.....	81
4.3.1	pH.....	82
4.3.2	Volatile solids.....	82
4.3.3	Total organic carbon.....	83
4.3.4	Water soluble ammonium.....	84
4.3.5	Water soluble nitrate.....	85

4.3.6	TKN.....	85
4.3.7	Total Phosphorus .....	86
4.3.8	Evolution of heavy metal concentrations during vermicomposting .....	87
4.3.9	Assessment of the impact of worm starter density on vermicomposting process.....	89
4.4	Earthworm Avoidance-response .....	90
4.5	Hygienic parameters.....	92
4.5.1	Escherichia coli.....	93
4.5.2	Fecal coliforms .....	94
4.5.3	Enterococcus faecalis.....	96
4.5.4	Salmonella spp.....	98
4.5.5	Shigella spp.....	99
4.5.6	Enterobacter.....	101
4.5.7	Assessment of earthworm influence on SIB populations.....	103
<b>5</b>	<b>Proposed Continuous Flow Vermicomposting Toilet for Stand-alone Household Implementation and Integration with Terra Preta Sanitation .....</b>	<b>106</b>
5.1	Introduction.....	106
5.2	Background information on Loumbila.....	106
5.3	Current sanitation practice in Loumbila.....	107
5.4	Proposed continuous-flow vermicomposting toilet system for household application 107	
5.5	Description of the proposed system .....	108
5.6	Costs estimate and analysis of the proposed system as applicable to the different scenarios.....	109
<b>6</b>	<b>Conclusions and Recommendations .....</b>	<b>111</b>
6.1	Conclusions .....	111
6.2	Recommendations for further research .....	113
6.2.1	Reactor design and geometry.....	113
6.2.2	C:N ratio .....	114
6.2.3	Microbiological aspects.....	114
6.2.4	Integration with Terra preta sanitation.....	114
	<b>References.....</b>	<b>115</b>
