# Topics in Structural VAR Econometrics

Second, Revised and Enlarged Edition

With 13 Figures  
and 7 Tables

Springer

# Contents

<b>Foreword</b>	vii
<b>Chapter 1: From VAR models to Structural VAR models</b>	1
1.1. Origins of VAR modelling	1
1.2. Basic concepts of VAR analysis	2
1.3. Efficient estimation: the BVAR approach	6
1.4. Uses of VAR models	10
1.4.1. Dynamic simulation	10
1.4.2. Unconditional and conditional forecasting	11
1.4.3. Granger causality	13
1.5. Different classes of Structural VAR models	15
1.6. The likelihood function for SVAR models	19
1.7. Structural VAR models vs. dynamic simultaneous equations models	22
1.8. Some examples of Structural VARs in the applied literature	23
1.8.1. Triangular representation deriving from the Choleski decomposition of $\Sigma$	24
1.8.2. Blanchard and Quah (1989) long run constraints	24
1.8.3. A traditional interpretation of macroeconomic fluctuations: Blanchard (1989)	26
<b>Chapter 2: Identification analysis and F.I.M.L. estimation for the K-Model</b>	29
2.1. Identification analysis	29
2.2. F.I.M.L. estimation	36
<b>Chapter 3: Identification analysis and F.I.M.L. estimation for the C-Model</b>	40
3.1. Identification analysis	40
3.2. F.I.M.L. estimation	45
<b>Chapter 4: Identification analysis and F.I.M.L. estimation for the AB-Model</b>	48
4.1. Identification analysis	48

4.2. F.I.M.L. estimation	57
<b>Chapter 5: Impulse response analysis and forecast error variance decomposition in SVAR modelling</b>	60
5.1. Impulse response analysis	60
5.2. Variance decomposition (by Antonio Lanza-rotti)	67
5.3. Finite sample and asymptotic distributions for dynamic simulations	73
<b>Chapter 6: Long run a priori information. Deterministic components. Cointegration</b>	78
6.1. Long run a priori information	78
6.2. Deterministic components	82
6.3. Cointegration	85
6.3.1. Representation and identification issues	88
6.3.2. Estimation issues	91
6.3.3. Interpretation of the cointegrating coefficients	98
6.3.4. Asymptotic distributions of the parameter estimates: Structural VAR analysis with cointegrated series	100
6.3.5. Finite sample properties	103
<b>Chapter 7: Model selection in Structural VAR analysis</b>	107
7.1. General aspects of the model selection problem	107
7.2. The dominance ordering criterion	108
7.3. The likelihood dominance criterion (LDC)	111
<b>Chapter 8: The problem of non fundamental representations</b>	114
8.1. Non fundamental representations in time series models	114
8.2. Economic significance of non fundamental representations and examples	118
8.3. Non fundamental representations and applied SVAR analysis	120
8.4. An example	125
<b>Chapter 9: Two applications of Structural VAR analysis</b>	131
9.1. A traditional interpretation of Italian macroeconomic fluctuations	131

9.1.1. The reduced form VAR model	132
9.1.2. Cointegration properties	133
9.1.3. Structural identification of instantaneous relationships	134
9.1.4. Dynamic simulation	135
9.2. The transmission mechanism among Italian interest rates	136
9.2.1. The choice of the variables	136
9.2.2. The reduced form VAR model	137
9.2.3. Cointegration properties	139
9.2.4. Structural identification of instantaneous relationships	143
9.2.5. Dynamic simulation	145
9.2.6. The Lippi-Reichlin criticism	149
<b>Annex 1: The notions of reduced form and structure in Structural VAR modelling</b>	151
<b>Annex 2: Some considerations on the semantics, choice and management of the K, C, and AB-models</b>	154
<b>Appendix A</b>	159
<b>Appendix B</b>	162
<b>Appendix C (by Antonio Lanzarotti and Mario Seghelini)</b>	165
<b>References</b>	174
