

Surface and Interfacial Aspects of Biomedical Polymers

*Volume 2
Protein Adsorption*

*Edited by
Joseph D. Andrade*

*University of Utah
Salt Lake City, Utah*

PLENUM PRESS • NEW YORK AND LONDON

~~Journal of Biomedical Materials Research~~
~~Volume 22~~
~~1988~~

Contents

1. Principles of Protein Adsorption Joseph D. Andrade

1. Introduction	1
2. Information Desired and Methods Available	4
3. Protein Characteristics and Principles	10
3.1. Introduction	10
3.2. Forces and Interactions	13
3.3. Three-Dimensional and Surface Structures	19
4. Mass Transport Considerations	29
4.1. Introduction	29
4.2. Diffusion	29
4.3. Convection (Flow)	31
4.4. Convective Diffusion	33
5. Multiple Equilibria Model	35
5.1. Introduction	35
5.2. Protein-Ligand Interactions	35
5.3. Adsorption from Solution	44
5.4. Protein Chromatography	46
5.5. Real Biomaterial Surfaces—or Surfaces of Very High Densities	49
5.6. Conclusions	52
6. Conformation Effects	55
6.1. Introduction	55
6.2. Adsorption and Conformation	55
6.3. Conclusions	60
7. Hysteresis and Time Dependence	60
7.1. Introduction	60
7.2. Time as a Variable	61
7.3. Exchange vs. Desorption	63
8. Principles and "Rules of Thumb"	65
8.1. Area Required for Initial Adsorption	65
8.2. Electrical Potential Barrier	67

8.3. Hydrophobicity	68
8.4. Other Principles	68
9. Other Topics	69
9.1. Protein Sensors	69
9.2. Surfaces Which Minimize Protein Adsorption	71
9.3. Labeling Effects	71
9.4. Liquid/Water Interface Studies	74
10. Summary/Conclusions	74
References	75

2. Total Internal Reflection Intrinsic Fluorescence (TIRIF) Spectroscopy Applied to Protein Adsorption

V. Hlady, R. A. Van Wagenen, and J. D. Andrade

1. Introduction	81
2. Intrinsic Protein Fluorescence	82
3. Evanescent Wave Theory	86
4. Methodology	90
4.1. Experimental Equipment	90
4.2. Methods of TIRIF Quantitation	93
4.3. Flow Cell Hydrodynamics	100
5. Results and Discussion	102
5.1. Adsorption Isotherms	102
5.2. Desorption Rate Studies	103
5.3. Minimizing Protein Adsorption	107
5.4. Emission Spectra	110
5.5. Limitations of TIRIF	113
6. Conclusions	116
References	117

3. Interactions of Macromolecules with Surfaces in Shear Fields Using Visible Wavelength Total Internal Reflection Fluorescence

Yu-Ling Cheng, Brent K. Lok, and Channing R. Robertson

1. Introduction	121
1.1. Gas Adsorption on Solid Surfaces	122
1.2. Adsorption of Macromolecules on Solid Surfaces	123
1.3. Shear Effects on Macromolecules in Solution	131
1.4. Shear Effects on the Adsorption Process and on Adsorbed Macromolecules	132

2. Visible TIRF Methodology	132
2.1. Theory	132
2.2. Application of TIRF to Protein Adsorption	134
2.3. TIRF Apparatus—Optics	135
2.4. Protein Adsorption Apparatus	135
2.5. TIRF Protein Adsorption—Experimental Considerations	135
2.6. Calibration	140
3. TIRF Results	143
3.1. Isotherms	143
3.2. Kinetics Modeling	148
3.3. Surface Diffusion	152
3.4. Multiple Protein Studies	153
4. TIRF Future	154
4.1. Fluorescence Spectra of Adsorbed Protein Layers	154
4.2. Fluorescence Polarization	155
4.3. Fluorescence Energy Transfer	155
4.4. Quantum Yield as a Probe of Surface Structure	156
4.5. Layer-Thickness Measurements	156
5. Conclusions	157
References	157

4. Surface Enhanced Raman Spectroscopy of Biological Macromolecules

Therese M. Cotton

1. Introduction	161
2. Background	163
2.1. Historical Perspective	163
2.2. Surface-Enhanced Raman Scattering Theories	164
2.3. Correlations between Experimental Results and Theories	165
2.4. Types of Substrates	166
2.5. Combined Surface Enhanced and Resonance Raman Effects	167
2.6. Enhancement of Fluorescence	170
3. Application of SERS and SERRS to Organic and Biologically Important Molecules	171
3.1. Amino Acids and Nucleic Acid Bases	171
3.2. Polyadenylic Acid and DNA	172
3.3. Lipid Monolayers	173
3.4. Redox Proteins	174
3.5. Porphyrins	180
3.6. Phospholipid Vesicles	181
3.7. Hemoglobin	182

4. Conclusions and Future Directions	182
References	184
5. The Study of Interfacial Proteins and Biomolecules by X-Ray Photoelectron Spectroscopy Royston W. Paynter and Buddy D. Ratner	
1. Introduction	189
1.1. Proteins and Protein Films	191
1.2. XPS for Protein Studies	193
2. Literature Review—XPS of Biological Molecules	199
2.1. Valence Band Studies	199
2.2. XPS of Small Molecules	200
2.3. XPS of Organic Sulfur	200
2.4. XPS of Porphyrins	201
2.5. XPS of Metal-Containing Proteins	201
2.6. Other Applications of XPS in Biology	202
2.7. XPS of Surface-Adsorbed Biomolecules	202
3. Recent Studies on Adsorbed Protein Films	204
References	210
6. Chromatographic Analysis of Protein Adsorption Bernard Koltisko and Alan Walton	
1. Introduction	217
2. General Theory	218
3. Frontal Analysis	221
4. Adsorption System	224
5. Discussion	234
6. Summary and Conclusions	236
References	237
7. Proton Titration and Electrokinetic Studies of Adsorbed Protein Layers W. Norde and J. Lyklema	
1. Introduction	241
2. Probing Protein Adsorption through Proton Titration	243
2.1. Titration of Adsorbed Polyelectrolytes	243
2.2. Titration of Adsorbed Proteins	247
2.3. Case Studies: Adsorption of HPA and RNase	250

3. Probing Protein Adsorption Electrokinetically	255
3.1. Electrokinetics of Adsorbed Proteins	255
3.2. Case Studies	257
References	260

8. Probing Protein Adsorption via Microcalorimetry

W. Norde

1. Introduction	263
2. Principles of Calorimetry	265
3. Microcalorimetry of Protein Adsorption	268
3.1. Surface Coverage	269
3.2. Electrical Charge	276
3.3. Temperature	278
4. Thermodynamics of Protein Adsorption	280
4.1. Factors Involved in the Adsorption Process	282
4.2. Resolution of the Adsorption Enthalpy	287
4.3. Gibbs Energy and Entropy of Adsorption	290
5. Concluding Remarks	292
References	292

9. Protein Adsorption Hysteresis

Herbert P. Jennissen

1. Introduction	295
2. The Phenomenon of Protein Adsorption Hysteresis	297
2.1. Time Dependence and Equilibrium	297
2.2. Adsorption-Desorption Loops	299
2.3. Other Forms of Macroscopic Hysteresis Involving Proteins	302
3. Thermodynamic Aspects of Adsorption Hysteresis	304
3.1. Irreversibility	304
3.2. Metastability	306
3.3. Treatment of Experimental Data	307
3.4. Model of a Domain in Protein Adsorption Hysteresis	308
4. Molecular Basis of Adsorption Hysteresis	309
4.1. Capillary Condensation Theory of Gases	309
4.2. Mechanism of Protein Adsorption Hysteresis	310
5. Future Aspects of Protein Adsorption Hysteresis	317
References	318

10. Modeling of Protein Adsorption

A. Silberberg

1. Introduction	321
2. Theoretical Models	321
2.1. The Adsorption of Linear Flexible Macromolecules	322
2.2. The Adsorption of Macromolecules in General	324
2.3. The Adsorption of Macromolecules in Multilayers	325
2.4. The Adsorption of Macromolecules of Specific Structure in Directed Ways. Conformational Changes and Surface Activation	326
3. Experimental Models and Approaches	328
3.1. The Adsorption of Proteins on Glass and Mica	328
3.2. Measurement of the Thickness of the Layer of Adsorbed Macromolecules by Time of Flow	328
3.3. Adsorption of Soluble Collagen	330
3.4. Adsorption of Bovine Serum Albumin	333
4. Discussion	335
References	336
