Stochastic Integrals

An Introduction

Friedr. Vieweg & Sohn Braunschweig/Wiesbaden

CONTENTS

Preface	v
Contents	vii
CHAPTER 1. Warming Up	1
1.1 Brownian motion and the Poisson process	1
1.2 Simple versions of the stochastic integral	8
1.3 A guided tour through semimartingale integration	19
CHAPTER 2. Filtrations and Processes	28
2.1 Filtrations	28
2.2 Stopping times	32
2.3 Stopping a process	36
CHAPTER 3. Martingales	42
3.1 Martingales with a finite index set: Doob's inequalities	45
3.2 Convergence theorems and continuous time martingales	49
CHAPTER 4. Localization and Approximation	60
4.1 Localization and stochastic intervals	60
4.2 Local martingales	63
4.3 Local approximation	67
4.4 Elementary processes and their limits	72

CHAPTER 5. The Stochastic Integral	76
5.1 Stieltjes integrals	77
5.2 The elementary integral	85
5.3 Pathwise Stieltjes integrals and why they are not sufficient	87
5.4 The martingale integral for regular integrands	91
5.5 Continuity of the integral	97
5.6 The increasing process of a local L^2 -martingale	100
5.7 PASTA: An application of the Poisson integral	108
CHAPTER 6. Predictability	111
6.1 Predictable sets and processes	111
6.2 The martingale integral for predictable integrands	116
6.3 Relaxing predictability of the integrand	124
6.4 Predictable stopping	127
6.5 Predictable projection and desintegration	136
6.6 Decomposition of submartingales	145
CHAPTER 7. Semimartingales and Stochastic Differentials	149
7.1 Integration with respect to semimartingales	149
7.2 The structure of noncontinuous semimartingales	156
7.3 Mutual variation of semimartingales	161
7.4 The space of stochastic differentials	170
7.5 Multidimensional semimartingale operations	175
CHAPTER 8. Itô Calculus	179
8.1 Itô's formula: the continuous case	180
8.2 An application: The exponential of a continuous semimartingale	183
8.3 Another aspect of Itô's formula: local time	186
8.4 Itô's formula with jumps	190
8.5 The Stratonovich-Fisk integral	195
8.6 The vector-valued Itô and Stratonovich formulas	198

CHAPTER 9. The Special Role of Brownian Motion	203
9.1 Lévy's characterization of Brownian motion	204
9.2 Continuous martingales are time-changed Brownian motions	211
9.3 Harmonic functions and martingales	219
9.4 Characterization of homogeneous transition functions	224
9.5 Conformal invariance	226
9.6 Hermite polynomials and Wiener chaos	231
9.7 Brownian filtrations	238
CHAPTER 10. Change of Measure	244
10.1 Semimartingales under a change of measure	245
10.2 The formulas of Girsanov-Maruyama and Cameron-Martin	250
10.3 An a posteriori justification of semimartingales	256
CHAPTER 11. Stochastic Differential Equations	262
11.1 A stochastic Picard-Lindelöf theorem	265
11.2 The moments of the solutions	274
11.3 Markovian solutions	278
CHAPTER 12. Towards Diffusions	282
12.0 What is a diffusion ?	282
12.1 Constructing diffusions as solutions of SDEs	287
12.2 On the form of the diffusion operator	292
12.3 The Feynman-Kac formula	296
12.4 Weak solutions and uniqueness	299
12.5 The time-homogeneous case and semigroups	308
12.6 The martingale problem	312
References	322
Index of Common Notation	327
Subject Index	329
