CONTENTS

<i>Contributors</i>	ix
1. Introduction: From pipeline economics to computational economics <i>Ramon Marimon and Andrew Scott</i>	1
Part I Almost linear methods	
2. Linear quadratic approximations: An introduction <i>Javier Díaz-Giménez</i>	13
3. A toolkit for analysing nonlinear dynamic stochastic models easily <i>Harald Uhlig</i>	30
4. Solving nonlinear rational expectations models by eigenvalue–eigenvector decompositions <i>Alfonso Novales, Emilio Domínguez, Javier Pérez, and Jesús Ruiz</i>	62
Part II Nonlinear methods	
5. Discrete state-space methods for the study of dynamic economies <i>Craig Burnside</i>	95
6. Application of weighted residual methods to dynamic economic models <i>Ellen R. McGrattan</i>	114
7. The parameterized expectations approach: Some practical issues <i>Albert Marcet and Guido Lorenzoni</i>	143
8. Finite-difference methods for continuous-time dynamic programming <i>Graham V. Candler</i>	172
Part III Solving some dynamic economies	
9. Optimal fiscal policy in a linear stochastic economy <i>Thomas J. Sargent and François R. Velde</i>	197
10. Computing models of social security <i>Ayşe Imrohoroglu, Selahattin Imrohoroglu, and Douglas H. Joines</i>	221
11. Computation of equilibria in heterogeneous-agent models <i>José Víctor Rios-Rull</i>	238
