

# Dipole Moments in Organic Chemistry

By Otto Exner

27 Figures, 10 Tables

Georg Thieme Publishers Stuttgart 1975

# Table of Contents

<b>Preface</b> . . . . .	III
<b>1. Basic Principles</b> . . . . .	1
1.1. Introduction . . . . .	1
1.2. Definition of the Dipole Moment . . . . .	1
1.3. Theory of Dielectric Polarization . . . . .	3
1.4. Dielectrics in Alternating Field . . . . .	7
References . . . . .	10
<b>2. Experimental Methods</b> . . . . .	11
2.1. Dielectric Measurement in the Gas Phase . . . . .	11
2.2. Dielectric Measurement in Solution . . . . .	12
2.3. Other Methods . . . . .	15
2.4. The Problem of Atomic Polarization . . . . .	17
2.5. Solvents and Solvent Effects . . . . .	20
2.6. Practical Hints for the Halverstadt-Kumler Method . . . . .	22
References . . . . .	25
<b>3. Dependence of the Dipole Moment on Structure</b> . . . . .	27
3.1. Symmetry Considerations . . . . .	27
3.2. Direction of the Vector . . . . .	30
3.3. Empirical Calculations from Bond Moments . . . . .	35
3.4. Refined Empirical Procedures . . . . .	40
3.5. Quantum Chemical Calculations . . . . .	44
3.6. Correlations with Reactivity Parameters . . . . .	47
3.7. Mixtures of Isomers and Molecules with Rotating Groups . . . . .	49
References . . . . .	53
<b>4. Structure Determination Using Dipole Moments</b> . . . . .	55
4.1. General Problems and Possibilities . . . . .	55
4.2. Reliability of the Results in Probability Terms . . . . .	57
4.3. Determination of Structure in the Classical Sense . . . . .	63
References . . . . .	65
<b>5. Determination of Configuration and Conformation</b> . . . . .	66
5.1. General Considerations . . . . .	66
5.2. Assignments Based on Symmetry . . . . .	68
5.3. Qualitative Relative Prediction . . . . .	74
5.4. Use of Model Compounds . . . . .	77
5.5. Vector Addition of Bond Moments . . . . .	81
5.6. Use of Substituted Compounds . . . . .	87
5.7. Graphical Methods . . . . .	91
5.8. Combination with Other Physical Methods . . . . .	96
References . . . . .	100
<b>6. Dipole Moments and Electronic Structure</b> . . . . .	103
6.1. General Problems . . . . .	103
6.2. Inductive Effects . . . . .	105
6.3. Mesomeric Moments of Substituents . . . . .	108
6.4. Mesomeric Effects in Conjugated Systems . . . . .	113

6.5. Intramolecular Hydrogen Bonding . . . . .	116
6.6. Dipole Moments in the Excited State . . . . .	119
References . . . . .	122
<b>7. Intermolecular Interactions . . . . .</b>	<b>124</b>
7.1. Methodical Problems . . . . .	124
7.2. Intermolecular Hydrogen Bond . . . . .	129
7.3. Donor-Acceptor Complexes . . . . .	132
7.4. Association of Dipoles and Ions . . . . .	134
References . . . . .	135
<b>8. The Kerr Effect and the Cotton-Mouton Effect . . . . .</b>	<b>137</b>
8.1. Principles of the Methods . . . . .	137
8.2. Applications in Connection with Dipole Moments . . . . .	142
References . . . . .	148
<b>9. Concluding Remarks . . . . .</b>	<b>148</b>
<b>Formula Index . . . . .</b>	<b>150</b>
<b>Type of Compound Index . . . . .</b>	<b>154</b>
<b>Subject Index . . . . .</b>	<b>155</b>
