	Preface	xiii
1	Introduction	1
1.1	Present Challenges	1
1.2	Solutions Based on Neural Networks	2
1.3	Mathematical Notation	3
	References	5
2	Physical Background of Atmospheric Remote Sensing	7
2.1	Overview of the Composition and Thermal Structure of the Earth's Atmosphere	7
2.1.1	Chemical Composition of the Atmosphere	8
2.1.2	Vertical Distribution of Pressure and Density	9
2.1.3	Thermal Structure of the Atmosphere	10
2.1.4	Cloud Microphysics	11
2.2	Electromagnetic Wave Propagation	12
2.2.1	Maxwell's Equations and the Wave Equation	12
2.2.2	Polarization	13
2.2.3	Reflection and Transmission at a Planar Boundary	15
2.3	Absorption of Electromagnetic Waves by Atmospheric Gases	16
2.3.1	Mechanisms of Molecular Absorption	17
2.3.2	Line Shapes	17
2.3.3	Absorption Coefficients and Transmission Functions	17

2.3.4	The Atmospheric Absorption Spectra	18
2.4	Scattering of Electromagnetic Waves by Atmospheric Particles	19
2.4.1	Mie Scattering	19
2.4.2	The Rayleigh Approximation	21
2.4.3	Comparison of Scattering and Absorption by Hydrometeors	22
2.5	Radiative Transfer in a Nonscattering Planar-Stratified Atmosphere	22
2.5.1	Equilibrium Radiation: Planck and Kirchhoff's Laws	24
2.5.2	Radiative Transfer Due to Emission and Absorption	24
2.5.3	Integral Form of the Radiative Transfer Equation	25
2.5.4	Weighting Function	27
2.6	Passive Spectrometer Systems	30
2.6.1	Optical Spectrometers	31
2.6.2	Microwave Spectrometers	32
2.7	Summary	33
	References	35
3	An Overview of Inversion Problems in Atmospheric Remote Sensing	37
3.1	Mathematical Notation	38
3.2	Optimality	38
3.3	Methods That Exploit Statistical Dependence	39
3.3.1	The Bayesian Approach	39
3.3.2	Linear and Nonlinear Regression Methods	41
3.4	Physical Inversion Methods	45
3.4.1	The Linear Case	45
3.4.2	The Nonlinear Case	46
3.5	Hybrid Inversion Methods	48
3.5.1	Improved Retrieval Accuracy	48
3.5.2	Improved Retrieval Efficiency	49
3.6	Error Analysis	49
3.6.1	Analytical Analysis	49
3.6.2	Perturbation Analysis	5
3.7	Summary	5
	References	52

4	<u>Signal Processing and Data Representation</u>	55
4.1	Analysis of the Information Content of Hyperspectral Data	56
4.1.1	Shannon Information Content	56
4.1.2	Degrees of Freedom	58
4.2	Principal Components Analysis (PCA)	59
4.2.1	Nonlinear PCA	61
4.2.2	Linear PCA	61
4.2.3	Principal Components Transforms	63
4.2.4	The Projected PC Transform	64
4.2.5	Evaluation of Radiance Compression Performance Using Two Different Metrics	67
4.3	Representation of Nonlinear Features	69
4.4	Summary	70
	References	71
5	<u>Introduction to Multilayer Perceptron Neural Networks</u>	73
5.1	A Brief Overview of Machine Learning	74
5.1.1	Supervised and Unsupervised Learning	74
5.1.2	Classification and Regression	74
5.1.3	Kernel Methods	75
5.1.4	Support Vector Machines	76
5.1.5	Feedforward Neural Networks	78
5.2	Feedforward Multilayer Perceptron Neural Networks	82
5.2.1	Network Topology	82
5.2.2	Network Training	84
5.3	Simple Examples	85
5.3.1	Single-Input Networks	85
5.3.2	Two-Input Networks	93
5.4	Summary	94
5.5	Exercises	95
	References	96
6	<u>A Practical Guide to Neural Network Training</u>	97
6.1	Data Set Assembly and Organization	97
6.1.1	Data Set Integrity	98
6.1.2	The Importance of an Extensive and Comprehensive Data Set	98
6.1.3	Data Set Partitioning	98

6.2	Model Selection	100
6.2.1	Number of Inputs	100
6.2.2	Number of Hidden Layers and Nodes	100
6.2.3	Adaptive Model Building Techniques	101
6.3	Network Initialization	101
6.4	Network Training	102
6.4.1	Calculation of the Error Gradient Using Backpropagation	102
6.4.2	First-Order Optimization: Gradient Descent	104
6.4.3	Second-Order Optimization: Levenberg-Marquardt	104
6.5	Underfitting and Overfitting	105
6.6	Regularization Techniques	107
6.6.1	Treatment of Noisy Data	108
6.6.2	Weight Decay	110
6.7	Performance Evaluation	111
6.8	Summary	112
	References	114
7	<u>Pre- and Post-Processing of Atmospheric Data</u>	115
7.1	Mathematical Overview	116
7.2	Data Compression	117
7.3	Filtering of Interfering Signals	118
7.3.1	The Wiener Filter	119
7.3.2	Stochastic Cloud Clearing	120
7.4	Data Warping	124
7.4.1	Function of Time of Day	125
7.4.2	Function of Geolocation	129
7.4.3	Function of Time of Year	131
7.5	Summary	134
	References	135
8	<u>Neural Network Jacobian Analysis</u>	137
8.1	Calculation of the Neural Network Jacobian	138
8.2	Neural Network Error Analysis Using the Jacobian	139
8.2.1	The Network Weight Jacobian	139
8.2.2	The Network Input Jacobian	140

8.2.3	Use of the Jacobian to Assess Noise Contribution	141
8.3	Retrieval System Optimization Using the Jacobian	143
8.3.1	Noise Smoothing Versus Atmospheric Smoothing	144
8.3.2	Optimization Approach	145
8.3.3	Optimization Results	146
8.4	Summary	146
	References	148
9	Neural Network Retrieval of Precipitation from Passive Microwave Observations	149
9.1	Structure of the Algorithm	149
9.1.1	Physical Basis of Preprocessing	150
9.1.2	Physical Basis of Post-Processing	153
9.2	Signal Processing Components	153
9.2.1	Limb-and-Surface Corrections	153
9.2.2	Precipitation Detection	155
9.2.3	Cloud Clearing by Regional Laplacian Interpolation	159
9.2.4	Temperature-Profile and Water-Vapor-Profile Principal Components	163
9.2.5	Image Sharpening	164
9.3	Development of the Algorithm	165
9.4	Retrieval Performance Evaluation	168
9.4.1	Image Comparisons of NEXRAD and AMSU/HSB	168
9.4.2	Numerical Comparisons of NEXRAD and AMSU/HSB Retrievals	169
9.4.3	Global Retrievals of Rain and Snow	173
9.5	Summary	175
	References	176
10	Neural Network Retrieval of Atmospheric Profiles from Microwave and Hyperspectral Infrared Observations	179
10.1	The PPC/NN Algorithm	180
10.1.1	Network Topology	181
10.1.2	Network Training	181
10.2	Retrieval Performance Comparisons with Simulated Clear-Air AIRS Radiances	181

10.2.1	Simulation of AIRS Radiances	182
10.2.2	An Iterated Minimum-Variance Technique for the Retrieval of Atmospheric Profiles	183
10.2.3	Retrieval Performance Comparisons	184
10.2.4	Discussion	185
10.3	Validation of the PPC/NN Algorithm with AIRS/AMSU Observations of Partially Cloudy Scenes over Land and Ocean	188
10.3.1	Cloud Clearing of AIRS Radiances	188
10.3.2	AIRS/AMSU/ECMWF Data Set	188
10.3.3	AIRS/AMSU Channel Selection	189
10.3.4	PPC/NN Retrieval Enhancements for Variable Sensor Scan Angle and Surface Pressure	189
10.3.5	Retrieval Performance	190
10.3.6	Retrieval Performance Sensitivity Analyses	194
10.3.7	Discussion and Future Work	198
10.4	Summary and Conclusions	201
	References	202
11	Discussion of Future Work	205
11.1	Bayesian Approaches for Neural Network Training and Error Characterization	205
11.2	Soft Computing: Neuro-Fuzzy Systems	206
11.3	Nonstationarity Considerations: Neural Network Applications for Climate Studies	207
	References	209
