CONTENTS

PART I. BASIC CONCEPTS

1 Overview 3

1.1 Planning and forecasting 3
1.2 What this book is about 4
1.3 Time-series data 6
1.4 Single-series (univariate) analysis 8
1.5 When may UBJ models be used? 9
1.6 The Box–Jenkins modeling procedure 16
1.7 UBJ models compared with other models 19

Summary 20

Questions and problems 21

2 Introduction to Box–Jenkins analysis of a single data series 24

2.1 Differencing 24
2.2 Deviations from the mean 29
2.3 Two analytical tools: the estimated autocorrelation function (acf) and estimated partial autocorrelation function (pacf) 29

Summary 43

Questions and problems 44

3 Underlying statistical principles 45

3.1 Process, realization, and model 45
3.2 Two common processes 47
3.3 Statistical inference at the identification stage 67

Summary 74

Appendix 3A: Expected value rules and definitions 76

Questions and problems 77

4 An introduction to the practice of ARIMA modeling 80

4.1 What is a good model? 80
4.2 Two examples of UBJ–ARIMA modeling 83

Summary 91

Questions and problems 92

5 Notation and the interpretation of ARIMA models 94

5.1 Three processes and ARIMA(p, d, q) notation 95
5.2 Backshift notation 96
5.3 Interpreting ARIMA models I: optimal extrapolation of past values of a single series 103
5.4 Interpreting ARIMA models II: rationalizing them from their context 105
5.5 Interpreting ARIMA models III: ARIMA(0, d, q) models as exponentially weighted moving averages 109

Summary 115

Questions and problems 117

6 Identification: stationary models 119

6.1 Theoretical acf's and pacf's for five common processes 121
6.2 Stationarity 130
6.3 Invertibility 133

6.4 Deriving theoretical acf's for the MA(1) process 136
6.5 Deriving theoretical acf's for the AR(1) process 142

Summary 148

Appendix 6A: The formal conditions for stationarity and invertibility 150

Appendix 6B: Invertibility, uniqueness, and forecast performance 152

Questions and problems 152

7 Identification: nonstationary models 155

7.1 Nonstationary mean 155
7.2 Nonstationary variance 175
7.3 Differencing and deterministic trends 186

Summary 189

Appendix 7A: Integration 190

8 Estimation 192

8.1 Principles of estimation 192
8.2 Nonlinear least-squares estimation 197
8.3 Estimation-stage results: have we found a good model? 200

Summary 208

Appendix 8A: Marquardt's compromise 209

8A.1 Overview 210
8A.2 Application to an MA(1) 212

Appendix 8B: Backcasting 220

8B.1 Conditional least squares 220
8B.2 Unconditional least squares 221

9 Diagnostic checking 224

9.1 Are the random shocks independent? 224

9.2 Other diagnostic checks 230
9.3 Reformulating a model 233

Summary 237

Questions and problems 238

10 Forecasting **240**

10.1 The algebra of ARIMA forecasts 241
10.2 The dispersion of ARIMA forecasts 252
10.3 Forecasting from data in logarithmic form 256
10.4 The optimality of ARIMA forecasts 258

Summary 259

Appendix 10A: The complementarity of ARIMA models and econometric models 261

Questions and problems 263

11 Seasonal and other periodic models **265**

11.1 Periodic data 268
11.2 Theoretical acf's and pacf's for seasonal processes 270
11.3 Seasonal differencing 274
11.4 Seasonal–nonseasonal multiplicative models 280
11.5 An example of a seasonal–nonseasonal multiplicative model 282
11.6 Nonmultiplicative models 288

Summary 292

Questions and problems 293

PART II. THE ART OF ARIMA MODELING

12 Practical rules **297**

Case Studies: Introduction **311**

GROUP A STATIONARY, NONSEASONAL MODELS

Case 1	**Change in business inventories**	**315**
Case 2	**Saving rate**	**328**
Case 3	**Coal production**	**347**
Case 4	**Housing permits**	**369**

GROUP B NONSTATIONARY, NONSEASONAL MODELS

Case 5	**Rail freight**	**391**
Case 6	**AT&T stock price**	**402**
Case 7	**Real-estate loans**	**411**
Case 8	**Parts availability**	**425**

GROUP C NONSTATIONARY, SEASONAL MODELS

Case 9	**Air-carrier freight**	**441**
Case 10	**Profit margin**	**463**
Case 11	**Boston armed robberies**	**472**
Case 12	**Machine-tool shipments**	**492**
Case 13	**Cigar consumption**	**506**
Case 14	**College enrollment**	**523**

Case 15 Exports 534
