PREFACE	VII
LIST OF TABLES	XV
LIST OF ILLUSTRATIONS	XVII
ABOUT THE AUTHORS	XIX
1. INTRODUCTION	1
1.1 Purpose	1
1.2 Significance of the Georgia Economic Model	1
1.3 Organization of this book	3
2. THE LOGIC OF INPUT-OUTPUT MODELS	4
2.1 Introduction	4
2.2 The state transactions table	4
2.3 The rationale for a model: analysis vs. description	9
2.4 Preparing the transactions table: closing with respect to households	9
2.5 The economic model	10
2.5.1 Identities: the transactions table	10
2.5.2 Technical conditions: the direct-requirements table	11
2.5.3 Equilibrium condition: supply equals demand	12
2.5.4 Solution to the systems: the total-requirements table	13
2.5.5 Summary and transition	15
2.6 Economic change in input-output models	16
2.6.1 Causes vs. consequences of change	16
2.6.2 Structural change	17
2.6.3 Changes in final demand	18
3. CONSTRUCTING THE TRANSACTIONS TABLE	20
3.1 General approach	20
3.2 Local- and primary-data sources	20
3.3 Secondary-data sources	21
3.3.1 The national input-output table as an initial data base	22

3.3.2	Problems in using the national table	24
3.3.3	Adjusting for price changes	28
3.4	The estimating procedure	30
3.4.1	A schematic review of available data	30
3.4.2	The state technology matrix	30
3.4.3	Estimating regional trade patterns	33
4.	INPUT-OUTPUT RELATIONS IN THE GEORGIA ECONOMY	39
4.1	Introduction	39
4.2	Final demand	40
4.2.1	Exporting industries	40
4.2.2	The economic base of Georgia	41
4.2.3	Local final demand	44
4.3	Final payments	44
4.3.1	Importing industries	44
4.3.2	Imported products	46
4.3.3	Household payments	46
4.4	Interindustry transactions	49
4.5	Income and product accounts for Georgia, 1970	51
4.6	Summary	55
5.	ECONOMIC MULTIPLIERS FOR GEORGIA INDUSTRIES	56
5.1	Introduction	56
5.2	The multiplier concept	56
5.2.1	A general discussion	56
5.2.2	Mathematical formulations	57
5.3	Output and employment multipliers	61
5.4	Household-income multipliers	63
5.5	Government-income multipliers	64
5.6	Industry contributions to the Georgia economy	64
6.	ECONOMIC PROJECTIONS	68
6.1	Introduction	68
6.2	Types of projections	68
6.3	The projection model	69
6.3.1	Review of basic techniques	69
6.3.2	Construction of the model	70

CONTENTS	XI
6.3.3 Basic assumptions	71
6.4 Baseline projections of the Georgia economy, 1980	71
6.4.1 Estimates of growth in exogenous demands and productivity	71
6.4.2 The aggregate projections	72
6.4.3 Industry projections	73
6.4.4 Allocation of employment projections to trade regions	75
7. ECONOMIC INTELLIGENCE	79
7.1 The strategy of development and input-output analysis	79
7.2 A self-sufficiency analysis	80
7.3 Income-per-employee index	88
7.4 Synthesis	89
7.A Mathematical appendix on skyline charts	89
8. IMPACT ANALYSIS	92
8.1 Types of short-run changes	92
8.2 Trade-pattern analysis	92
8.3 Development simulators	93
8.3.1 Introduction	93
8.3.2 New-plant simulator	94
8.3.3 New-industry simulator	94
8.4 Analysis of public projects: a development highway	96
9. A MARKET INFORMATION SYSTEM FOR GEORGIA	100
9.1 The input-output table as a market information system	100
9.2 A sample market analysis	100
9.3 Sources of data and computations for market analyses	109
9.4 Summary	113
10. CONCLUSIONS AND EXTENSIONS	115
10.1 Study summary	115
10.1.1 Empirical results	115
10.1.2 Analytic results	117

10.2	Extensions of the basic regional model	120
10.2.1	An area model system	120
10.2.2	An extended projection model	120
10.2.3	An economic-ecologic system	121
10.3	Conclusion	121
