Preface to the Second Edition xiii
Preface to the First Edition xv

CHAPTER 1. Optics, Light, and Vision
1.1 The Search for Solutions 1
1.2 The Scope of Optics and its Subfields 2
1.3 An Overview of the Human Visual Process 2
1.4 Perceptual Aspects of the Visual Process 3
1.5 The Eye 3
1.6 Electromagnetic Radiation 4
1.7 Wavelengths and Color 5
1.8 Absorption 6
1.9 Reflection 6
1.10 Scattering 7
1.11 The Speed of Light in a Medium 8
1.12 Refraction 8
1.13 Rectilinear Propagation, Shadows, and Mirages 10
Problems 11

CHAPTER 2. The Geometric Behavior of Light
2.1 Point Sources, Wavefronts, and Rays 13
2.2 Converging Wavefronts, Point Images, and Blur Circles 14
2.3 Diverging Wavefronts, Plane Waves, and Optical Infinity 15
2.4 The Concept of Vergence 16
2.5 Vergence: Conversion Factors 17
2.6 Upstream and Downstream Vergence Changes 19
2.7 Generalized or Reduced Vergence 21
2.8 Extended Sources and Beams 21
2.9 Extended Images and Blur 22
2.10 Pinholes or Image Formation by Blur Minimization 23
2.11 Refracting States of the Eye 25
Problems 26

CHAPTER 3. Optical Objects and Images
3.1 Optically Real versus Physically Real Objects 29
3.2 Optically Real versus Physically Real Images 30
3.3 Real Images as Objects for the Eye 31
3.4 Virtual Images 32
3.5 Virtual Objects 33
3.6 Object and Image Summary 34
3.7 The Image for System 1 is the Object for System 2 34
3.8 Conjugate Points and the Principle of Reversibility 35
3.9 Object Space/Image Space 36
Problems 37

CHAPTER 4. Thin Lenses and Ray Diagrams
4.1 How Spherical Lenses Work 39
4.2 Optical Axis 41
4.3 Thin Lenses 42
4.4 Secondary Focal Point (F_2) 42
4.5 Primary Focal Point (F_1) 43
4.6 Equidistance of Focal Points for a Thin Lens in Air 43
4.7 Predictable Rays/Converging Lenses/Off-Axis Object Points 44
4.8 Nodal Rays 46
4.9 Further Examples: Converging Lenses 47
4.10 Predictable Rays/Diverging Lenses/Off-Axis Object Points 48
4.11 Common Features 50
4.12 Scaling of Ray Diagrams 51
Problems 52

CHAPTER 5. Thin Lens Equations
5.1 Thin Lens Vergence Equation 53
5.2 Object and Image Distances 54
5.3 Dioptric Power: Focal Length Relationships 55

5.4 Lateral Magnification 56
5.5 Examples 56
5.6 Boundary Role of the Focal Points 62
5.7 The Symmetry Points 62
5.8 Unit Lateral Magnification 64
5.9 Object Movement/Image Movement 64
5.10 Erect and Inverted Relationships: Single Lenses 65
5.11 Two-Lens Systems 66
5.12 Two Thin Lenses in Contact 67
5.13 Bundles, Beams, and Lateral Magnification 70
5.14 Image Sizes for Distant Objects 70
5.15 Reversibility and Finding the Object 72
Problems 73

CHAPTER 6. Thin Lens Eye Models
6.1 Emmetropes 75
6.2 Myopes 76
6.3 Hyperopes 78
6.4 Spectacle Lens Corrections 79
6.5 Lens Effectivity Terminology 82
6.6 Ocular Accommodative Demand 82
6.7 Near Point and Range of Clear Vision: Myope 83
6.8 Range of Clear Vision: Emmetrope 84
6.9 Range of Clear Vision: Hyperope 84
6.10 Range of Clear Vision: Summary 85
6.11 Spectacle Accommodative Demand 87
6.12 Ocular Accommodative Demand through Spectacles 87
6.13 The Downstream Vergence Equation 89
6.14 Approximation for Accommodation through Spectacle Lenses 90
6.15 Accommodation through Contact Lenses 92
6.16 Over/Under Minus or Plus 93
6.17 Range of Clear Vision through Various Lenses 94
6.18 Retinal Image Sizes 95
6.19 Retinal Image Sizes: Spectacle versus Contact Lenses 95
Problems 97

CHAPTER 7. Single Spherical Refracting Interfaces
7.1 Convex/Concave Terminology 99
7.2 Sagittas and the Sagittal Approximation 100
7.3 Derivation of the Vergence Equation 102
7.4 Dioptric Power 103
7.5 Focal Points 105
7.6 The Nodal Point 109
7.7 Lateral Magnification 110
7.8 Imaging Examples 111
7.9 The Symmetry Points 114
7.10 Unit Magnification 116
7.11 The Nodal Plane 116
7.12 Strange Cases 117
7.13 Object Space/Image Space 119
7.14 Imaging a Distant Object 120
7.15 Changing Media without Changing Curvature 121
7.16 Lens Clock Readings 121
Problems 123

CHAPTER 8. Plane Refracting Interfaces and Reduced Systems
8.1 Plane Interfaces as a Special Case of Spherical Interfaces 125
8.2 Diverging and Converging Wavefronts 126
8.3 Lateral Magnification 127
8.4 Ray Tracing through a Flat Slab in Equi-index Media 128
8.5 Flat Slabs 129
8.6 Converging Light and Reduced Systems 131
8.7 Single Spherical Refracting Interfaces and Reduced Systems 132
8.8 Systems with Multiple Spherical Surfaces 134
8.9 Front and Back Vertex Powers 138
8.10 Vertex Neutralization 140
8.11 Reduced Angles 141
Problems 141

CHAPTER 9. Lenses Revisited
9.1 Lens Shapes 143
9.2 Thin Lens Power 143
9.3 Thick Lenses: Front and Back Vertex Powers 145
9.4 Thin Lenses in Different Media 146
9.5 Another Eye Model 147
9.6 Exploding a Single Spherical Refracting Interface 148
9.7 Contact Lenses 149
9.8 The Tear Lens Effect 150
9.9 Newton's Equations 151
9.10 Axial Magnification 154
Problems 154

CHAPTER 10. Astigmatism: On Axis
10.1 Introduction 157
10.2 Cylindrical Lenses 157
10.3 Standard Axis Notation 160
10.4 Perpendicularly Crossed Cylindrical Lenses 162
10.5 Collapsing the Conoid by Equalizing the Cross Cylinders 165

10.6 Equivalent Combinations and Transposition 165
10.7 Toric Surfaces 168
10.8 Extended Objects and Multiple Conoids 170
10.9 The Circle of Least Confusion and the Spherical Equivalent 172
10.10 Virtual Line Images 174
10.11 Through a Glass Astigmatically 175
10.12 Classification and Correction of Astigmats 175
10.13 The Clock Dial Chart 179
10.14 Jackson Cross Cylinder Power Refinement 180
10.15 Effectivity and Spherocylindrical Lenses 182
10.16 Accommodation and Spherocylindrical Corrections 183
Problems 184

CHAPTER 11. Prisms
11.1 Introduction 187
11.2 Total Internal Reflection 189
11.3 Deviation by a Thick Prism 192
11.4 Minimum Deviation 195
11.5 Deviation at Normal Incidence 197
11.6 Thick Prism Comparisons 198
11.7 Thin Prisms 198
11.8 Ophthalmic Base Directions 199
11.9 Prism-Diopters 200
11.10 Thin Prism Combinations 201
11.11 Centrads 203
11.12 The Risley Prism 204
11.13 Prism Effectivity 204
11.14 Fresnel Prisms 206
11.15 Reflecting Prisms 207
Problems 208

CHAPTER 12. Prism Properties of Lenses
12.1 Prentice's Rule 211
12.2 Prism–Lens Combinations 214
12.3 Prism in Cylindrical Lenses 216
12.4 Rotational Deviations by a Cylindrical Lens 218
12.5 Motions of Hand Neutralization 219
12.6 Motions of Retinoscope Reflex 220
12.7 Fresnel Lenses 224
12.8 Prism Effectivity with Thin Lenses 225
Problems 230

CHAPTER 13. Prism and Dioptric Power in Off-Axis Meridians
13.1 Curvature and Torsion 233
13.2 Stenopeic slits 233
13.3 Curvature and Lens Clock Readings 234
13.4 Torsional Component of Dioptric Power 238
13.5 Isothickness Curves 238
13.6 Matrix Form of Prentice's Rule 241
13.7 Prism in Spherocylindrical Lenses 243
13.8 Matrix Properties and Expanded Power Crosses 246
13.9 Decentration with Spherocylindrical Lenses 247
13.10 Prism for Combined Spherocylindrical Lenses 249
13.11 Finding $S \supset C \times \theta$ from the Dioptric Power Matrix 250
13.12 Combining Obliquely Crossed Spherocylindrical Lenses 251
13.13 Over-Refraction 254
13.14 The Vector Addition Method 256
13.15 The Residual Refractive Error 258
13.16 Axis Refinement with a JCC 259
13.17 The Vergence Matrix 260
13.18 Average Strength of a Spherocylindrical Lens 261
13.19 Three Dimensional Dioptric Power Representations 263
Problems 264

CHAPTER 14. Reflection
14.1 Mirrors and Other Reflecting Interfaces 267
14.2 Focal Points 269
14.3 Ray Diagrams and the Nodal Ray 271
14.4 Vergence Equations 276
14.5 Imaging Examples in Air 276
14.6 Imaging Examples for $n \neq 1$ 279
14.7 Through a Glass Darkly 282
14.8 Unit Lateral Magnification and the Radiuscope 283
14.9 Keratometry 284
14.10 Plane Mirrors 285
14.11 Left–Right Inversion 286
14.12 Ghost Images and Partially Silvered Mirrors 286
14.13 Equivalent Mirrors 287
Problems 292

CHAPTER 15. The Gauss System
15.1 Introduction 295
15.2 The Secondary Principal Plane 295
15.3 The Primary Principal Plane 297
15.4 Ray Diagrams 299
15.5 Conjugacy of the Principal Planes 300
15.6 Vergence Equations 303
15.7 Power and Focal Length Relations 305
15.8 Systems in Air 307
15.9 The Symmetry Points 308
15.10 Reduced Systems 309

15.11 The Nodal Points 310
15.12 The Cardinal Points and Reversibility 313
15.13 SSRI and Thin Lens as a Gauss System 314
15.14 Newton's Equation 315
15.15 The Nodal Slide 316
15.16 Thick Lenses 317
15.17 Special Thick Lens Examples 320
15.18 Summary of the Important Equations 322
Problems 322

CHAPTER 16. System Matrices
16.1 The Translation Matrix 325
16.2 The Refraction Matrix 326
16.3 The System Matrix 327
16.4 Determinant Condition 330
16.5 Subsystem Matrices 331
16.6 Two Lens Systems 332
16.7 The Object–Image Matrix 333
16.8 The Front Vertex to Secondary Focal Plane Matrix 334
16.9 Ametropic Eyes 336
16.10 The Gullstrand #1 Schematic Eye 337
16.11 Vertex Vergence Relations 339
16.12 Derivation of the Gauss Equation 340
16.13 Conversion to *abcd* notation 340
16.14 Astigmatic Systems 341
16.15 Asymmetric Equivalent Dioptric Power 343
Problems 344

CHAPTER 17. Angular Magnification
17.1 Relative Size Magnification 347
17.2 Angular Magnification without a Physical Size Change 348
17.3 Relative Distance Magnification 349
17.4 Plus Lens as a Simple Magnifier: Intuitive Method 350
17.5 Plus Lens as a Collimating Magnifier 351
17.6 The Conventional Reference Distance 353
17.7 Collimating Magnifier: Object to Eye Distance Unchanged 354
17.8 Magnifiers and Maximum Accommodation 355
17.9 The Badal Principle 356
17.10 General Equation for a Simple Magnifier 357
17.11 The Compound Microscope 358
17.12 Equivalent Power Formulation for Magnification 361
17.13 Afocal Telescopes 362
17.14 Alternate Afocal Telescope Equations 364
17.15 Erecting Systems in Keplerian Telescopes 366
17.16 Vergence Amplification through Afocal Telescopes 367
17.17 Telemicroscopes 368
17.18 Magnification Terminology 369
17.19 Equation Summary 370
Problems 370

CHAPTER 18. Spectacle Magnification and Relative Spectacle Magnification
18.1 The Aperture Stop and the Entrance Pupil 373
18.2 The Exit Pupil and Blurred Image Sizes 378
18.3 Thin Lens Spectacle Magnification 381
18.4 Spectacle Magnification Approximation 384
18.5 Telescope Concepts and Spectacle Magnification 384
18.6 Magnification Properties of a Thick Plano Lens 385
18.7 Shape and Power Factors 386
18.8 Shape and Power Factor Approximations 388
18.9 Comparison of Different Lenses for the Same Eye 389
18.10 Gauss Formulation for Spectacle Magnification 390
18.11 Telescopes for Ametropes 392
18.12 Relative Spectacle Magnification 393
18.13 Prism Effectivity and Dynamic Magnification 398
18.14 Meridional Telescopes 399
18.15 Power Factor in Spherocylindrical Corrections 401
18.16 Summary of Important Equations 402
Problems 403

CHAPTER 19. Stops and Related Effects
19.1 Field of View—Two Component Systems 405
19.2 Field of View of a Thin Collimating Magnifier 412
19.3 Multi-Component Systems 413
19.4 Telescope Entrance and Exit Pupils 417
19.5 Galilean Telescope Field of View 420
19.6 Keplerian Telescope Field of View 420
19.7 Terrestrial Telescopes 423
19.8 Direct and Indirect Ophthalmoscopes 424
19.9 Dynamic or Foveal Field of View 430
19.10 Film Exposure and the *F*-Number 432
19.11 Cosine To the Fourth Law 434
19.12 Depth of Field 435
19.13 Depth of Focus 438
Problems 438

CHAPTER 20. Aberrations
20.1 Detriments to Image Quality 441
20.2 Dispersion and Chromatic Aberration 441
20.3 Longitudinal and Lateral Chromatic Aberration 442
20.4 Standard Wavelengths and Abbe Number 443
20.5 The Achromatic Doublet 445
20.6 Achromatic Prisms 446
20.7 Thick Lenses and Chromatic Aberration 446
20.8 Separated Lenses of the Same Material 447
20.9 The Monochromatic Wavefront Aberration 448
20.10 The Seidel or Third Order Aberrations 449
20.11 Spherical Aberration 450
20.12 Coma 452
20.13 Radial Astigmatism 455
20.14 Curvature of Field 461
20.15 Distortion 463
20.16 Lens Design 464
20.17 Oblique Central Refraction for Spherocylindrical Lenses with Horizontal and Vertical Principal Meridians 465
20.18 Oblique Central Refraction in Spherocylindrical Lenses with Oblique Principal Meridians 466
20.19 Mirrors 468
20.20 Taylor and Zernike Classifications 468
Problems 468

CHAPTER 21. Waves and Superposition
21.1 Introduction 471
21.2 Basic Wave Properties 471
21.3 Harmonic Waves 473
21.4 Intensity 474
21.5 Frequency Invariance and Wavelength Changes 475
21.6 Superposition 476
21.7 Interference in a Ripple Tank 478
21.8 Standing Waves 479
21.9 Coherence 479
21.10 Young's Double-Slit Experiment 480
21.11 Partial Coherence and Fringe Visibility 482
21.12 Acuity Testing of the Visual Pathways by Interference Fringes 484
21.13 Other Methods for Producing Interference 484
21.14 Speckles and Laser Refraction 485
21.15 Thin Film Interference 487
21.16 Phase Changes at Reflection 488
21.17 Soap Films 489
21.18 Antireflection Coatings 490
21.19 Interference Filters 492
21.20 Newton's Rings 493
Problems 493

CHAPTER 22. Diffraction
22.1 The Huygens–Fresnel Principle 495
22.2 Single-Slit Diffraction 496
22.3 Diffraction by a Square Aperture 499
22.4 Diffraction by a Circular Aperture 499
22.5 Changing from a Square to a Circular Aperture 500
22.6 Fraunhofer versus Fresnel Diffraction 502
22.7 Diffraction Limit on Resolution 504
22.8 Diffraction and Acuity 506
22.9 Diffraction Halos 507
22.10 Apodized Circular Aperture 507
22.11 Diffraction Gratings 510
22.12 Simple Observations 512
22.13 Iridescence in Nature 512
22.14 Sinusoidal Amplitude Grating 512
22.15 Zone Plates 513
22.16 Ophthalmic Diffractive Lenses 517
22.17 Holography 517
22.18 Snell's Law from Huygens' Principle 520
Problems 521

CHAPTER 23. Scattering, Absorption, Dispersion, and Polarization
23.1 Dipole Radiation 523
23.2 Incoherent Scattering 523
23.3 Rayleigh Scattering 524
23.4 Multiple Incoherent Scattering 525
23.5 Coherent Scattering 528
23.6 Intraocular Light Scatter 529
23.7 Scattering and Selective Absorption 529
23.8 Resonance Radiation 530
23.9 Dispersion 531
23.10 Group versus Phase Velocity 532
23.11 Polarization Fundamentals 533
23.12 Polaroid 534
23.13 Polarization Plane Rotation by Polaroids 535
23.14 Polarization by Reflection 536
23.15 Polarization by Scattering 537
23.16 Birefringence 537
23.17 Circular Polarization 539
23.18 Phase Retarders 540
23.19 Circular Polarizers 541
23.20 Optical Activity and Induced Effects 541
23.21 Binocular Vision and Polarized Light 542
23.22 Ocular Birefringence and Haidinger's Brush 542
Problems 543

CHAPTER 24. Emission, Absorption, Photons, and Lasers
24.1 The Doppler Shift 545
24.2 Blackbody Radiation 545
24.3 Photons 548
24.4 Bohr Model of the Atom 550
24.5 Fluorescence and Phosphorescence 552
24.6 Stimulated Emission 553
24.7 Laser Theory 554
24.8 Gaussian Laser Beams 558
24.9 Common Lasers 562
24.10 Ophthalmic Laser Surgery 564
24.11 Laser Safety 566
24.12 Photons and Probability 566
24.13 Uncertainty 567
24.14 Diffraction and Single Photons 568
24.15 Interference and Single Photons 568
24.16 Photon Finale 570
Problems 570

CHAPTER 25. Spatial Distribution of Optical Information
25.1 Spatial Frequency 571
25.2 Sine versus Square Wave Gratings 571
25.3 The Modulation Transfer Function 573
25.4 Periodic Gratings and Linear Systems 574
25.5 Spread Functions and the MTF 577
25.6 MTFs of Various Systems 580
25.7 Coupled Systems 582
25.8 General Objects 583
25.9 A Nonlinear Example 583
25.10 MTFs in terms of cycles per degree 584
25.11 The Coherent Transfer Function 584
25.12 Abbe Theory of Image Formation 584
25.13 Spatial Filtering 586
25.14 Frequency Doubling of Laser Light 588
Problems 588

Appendix A: Trigonometry Review 591

Appendix B: Basic Matrix Algebra 595

Answers to Selected Problems 599
