

MAKESHIFT SHELTERS

Technical Notes on their Construction

The Nuclear Protection Advisory Group with the
permission of and in association with the Swiss
Federal Office for Civil Defence

THE OCTAGON PRESS
LONDON

CONTENTS

	<i>Page</i>
Introduction	v
Definitions	vi
1. Fundamentals	
1.1 Purpose of makeshift shelters	1
1.2 Selecting suitable premises	1
1.3 Preconditions	2
1.4 Adaptation	2
2. Planning	
2.1 Procedure	5
2.2 Basic planning requirements	6
2.3 Tools and materials	7
2.4 Time required	8
3. Structural Work	
3.1 Sealing up openings	11
3.2 Reinforcing entrances	14
3.2.1 Disposition of entrances	14
3.2.2 Reinforcing entrance doors	17
3.3 Emergency exits	19
3.4 Reinforcing ceilings	22
3.4.1 Increasing the load-supporting capacity of reinforced concrete ceilings of relatively small dimensions in building basements	22
3.4.2 Increasing the load-supporting capacity of flat-plate ceilings and beamed ceilings of reinforced concrete	27
3.4.3 Structural details for prop installation, prop base supports	33
3.4.4 Remarks on increasing the load-supporting capacity of special ceilings	37
3.4.5 Increasing protection against the effects of fire and nuclear radiation	37
3.4.6 Reinforcing the ceilings of rooms/areas adjoining the makeshift shelter	38
3.5 Reinforcing walls	39
3.5.1 Outer walls below ground	39

3.52	Free-standing outer walls	40
3.53	Free-standing interior walls	41
3.54	Partition walls inside the shelter	41
3.6	Ventilation	42
4.	Internal Fittings and Equipment	
4.1	Reserve supplies of water	46
4.2	Makeshift toilet	46
4.3	Lighting	47
4.4	Provision for sleeping and waking hours	48
4.5	Further items	48
5.	Example of a Makeshift Shelter	50
6.	Notes on the Use of Makeshift Shelters	53
7.	Notes on Possible Means of Protection when Underground Facilities are not Available	57
Appendix 1 Example of a Large Makeshift Shelter in an Underground Car Park		
1.1	Assessment of suitability for use as a makeshift shelter	60
1.2	Sketch giving location and data on surroundings	63
1.3	Sectional-ground plan showing reinforcements	64
1.4	Description of conversion work and calculation. of material requirements	66
1.5	List of materials required	77
1.6	List of times required	78
Appendix 2 Weapons Effects and Protection Afforded		
2.1	Atomic weapons	79
2.11	Mechanical weapons effects	79
2.12	Primary nuclear radiation	81
2.13	Secondary nuclear radiation (fall-out)	81
2.14	What is the neutron bomb?	82
2.15	Thermal radiation	82
2.2	Conventional weapons	83
2.21	Explosive projectiles	83
2.3	Chemical weapons	84
2.4	Biological weapons	85
2.5	Secondary weapons effects	86
2.51	Rubble and debris	86
2.52	Risk of fire	86
2.6	Summary	86
2.61	Physiological conditions for survival	86
2.62	Psychological behaviour	87
