INTRODUCTION:

ORIGIN OF STOCHASTIC DIFFERENTIAL EQUATIONS 1

INTRODUCTORY REMARKS 1
PROBLEMS OF STATISTICAL PHYSICS: LIOUVILLE'S EQUATION 2
BROWNIAN MOTION: LANGEVIN EQUATION 4
DYNAMICS OF MECHANICAL STRUCTURES 6
WAVES IN COMPLICATED MEDIA 11
TURBULENCE 13
References 14

I PRELIMINARIES 15

1. INTRODUCTORY REMARKS 15
2. PROBABILITY AND RANDOM VARIABLES 16
   2.1 Basic Concepts 16
   2.2 Some Probability Distributions 21
   2.3 Convergence of Sequences of Random Variables 24
3. STOCHASTIC PROCESSES 27
4. GAUSSIAN PROCESSES 33
5. STATIONARY PROCESSES 36
6. MARKOV PROCESSES 41
   6.1 Basic Definitions 41
   6.2 Diffusion Processes 45
   6.3 Vector Diffusion Processes 51
   6.4 Methods of Solving the Fokker-Planck-Kolmogorov Equation 52
7. PROCESSES WITH INDEPENDENT INCREMENTS; WIENER PROCESS AND POISSON PROCESS 60
   7.1 Definition and General Properties 60
   7.2 Wiener Process 62
   7.3 Poisson Process 67
   7.4 Processes Related to Poisson Process 69
8. GENERALIZED STOCHASTIC PROCESSES; WHITE NOISE 72
9. PROCESSES WITH VALUES IN HILBERT SPACE 77
10. STOCHASTIC OPERATORS 80
References 82

page

II STOCHASTIC CALCULUS 86

11. INTRODUCTORY REMARKS 86
12. PROCESSES OF SECOND ORDER; MEAN-SQUARE ANALYSIS 87
    12.1 Preliminaries 87
    12.2 Mean-Square Continuity 89
    12.3 Mean-Square Differentiation 90
    12.4 Mean-Square Stochastic Integrals 96
    12.5 Orthogonal Expansions 102
    12.6 Transformations of Second-Order Stochastic Processes 104
    12.7 Mean-Square Ergodicity 107
13. ANALYTICAL PROPERTIES OF SAMPLE FUNCTIONS 110
    13.1 Sample Function Integration 110
    13.2 Sample Function Continuity 112
    13.3 Sample Function Differentiation 114
    13.4 Sample Function Properties of Second-Order Stochastic Processes 115
14. ITÔ's STOCHASTIC INTEGRAL 120
15. STOCHASTIC DIFFERENTIAL. ITÔ's FORMULA 130
16. GENERALIZATIONS. REMARKS 137
17. EXAMPLES 140
References 146

III STOCHASTIC DIFFERENTIAL EQUATIONS: BASIC THEORY 148

18. INTRODUCTORY REMARKS 148
19. REGULAR STOCHASTIC DIFFERENTIAL EQUATIONS 151
    19.1 Mean-Square Theory 151
    19.2 Sample Function Solutions 153
    19.3 Analysis Via Stochastic Operators 155
    19.4 Asymptotic Analysis 160
20. ITÔ's STOCHASTIC DIFFERENTIAL EQUATIONS 163
    20.1 Basic Theorems 163
    20.2 Relation to Stratonovich Interpretation 169
    20.3 State Transformations and Simple Solutions 172

page

20.4 Asymptotic Properties 178
20.5 Equations with Markovian Coefficients 181
20.6 Equations with Jump Processes 183
21. STOCHASTIC DIFFERENTIAL EQUATIONS IN HILBERT SPACE. REMARKS 186
21.1 Introduction 186
21.2 Itô's Abstract Stochastic Equation 189
References 191

IV STOCHASTIC DIFFERENTIAL EQUATIONS: METHODS, SOLUTIONS, APPLICATIONS 196

22. INTRODUCTORY REMARKS 196
23. SYSTEMS WITH RANDOM INITIAL CONDITIONS 197
23.1 Probability Distribution of Solution 197
23.2 Liouville Equation 202
24. LINEAR SYSTEMS WITH RANDOM EXCITATION 204
24.1 Solution and Its Properties 204
24.2 Stationary Solutions; Spectral Method 213
24.3 Nonstationary Excitations; Random Impulses 217
24.4 Linear Systems and Normality 232
25. NONLINEAR SYSTEMS WITH RANDOM EXCITATION 239
25.1 White Noise Excitation 239
25.2 Real Random Excitation 253
26. STOCHASTIC SYSTEMS 264
26.1 General Remarks 264
26.2 White Noise Parametric Excitation 266
26.3 Real Random Parameters 271
27. OTHER PROBLEMS. REMARKS 284
27.1 Reliability Problems 284
27.2 Inverse Problems; System Identification 285
27.3 Stochastic Partial Differential Equations 286
APPENDIX 287
References 289
