Contents

1. Objectives of financial statement analysis, 1

The nature of financial analysis. Approaches to the subject: *Objectives of credit grantors. Objectives of equity investors.* Recent developments in investment theory: *Portfolio theory. Evaluation of risk and return. Categories of risk. Components of unsystematic risk. The capital asset pricing model. The efficient market hypothesis. Implications for financial statement analysis. Objectives of management. Objectives of acquisition and merger analysts. Objectives of auditors. Objectives of other interested groups.* Conclusion.

2. Tools and techniques of financial statement analysis—an overview, 22

Basic approaches to financial statement analysis. Reconstruction of business activities and transactions. Importance of the statement of changes in financial position: *Additional analytical functions.* Sources of information. The total information set. The principal tools of analysis: *Comparative financial statements. Index-number trend series. Common-size financial statements. Ratio analysis. Factors affecting ratios. Interpretation of ratios.* Illustration of ratio computations. Market measures. Testing the understanding of relationships: *Specialized tools of analysis.* Building blocks of financial statement analysis. Computer-assisted financial analysis: *1. Data storage, retrieval, and computational ability. 2. Screening large masses of data. 3. A research tool. 4. Specialized financial analyses.* Analytical review of accounting principles—purposes and focus: *Example of importance of accounting assumptions, standards, and determinations: Illustration of a simple investment decision.* Appendix 2A: Sources of information on financial and operating ratios. Appendix 2B: Financial statements of Alfa, Inc.

3. Analysis of short-term liquidity, 85

Significance of short-term liquidity. Working capital: *Current assets. Current liabilities. Other problem areas in the definition of current assets*

and liabilities. Working capital as a measure of liquidity. Current ratio: Limitations of the current ratio. Implications of the limitations to which the current ratio is subject. The current ratio as a valid tool of analysis. Measures that supplement the current ratio. Measures of accounts receivable liquidity. Average accounts receivable turnover ratio: Collection period for accounts receivable. Evaluation. Measures of inventory turnover: Inventory turnover ratio. Days to sell inventory. The effect of alternative methods of inventory management. Current liabilities: Differences of the "nature" of current liabilities. Days purchases in accounts payable ratio. Interpretation of the current ratio: Examination of trend. Interpretation of changes over time. Possibilities of manipulation. The use of "rules of thumb" standards. The net trade cycle. Valid working capital standards. The importance of sales. Common-size analysis of current assets composition. The liquidity index. Acid-test ratio. Other measures of short-term liquidity: Funds flow ratios. Cash flow related measures. The concept of financial flexibility. Management's discussion and analysis: Projecting changes in conditions or policies.

4. Funds flow analysis and financial forecasts, 121

Overview of cash flow and funds flow patterns. Short-term cash forecasts: *Importance of sales estimates. Pro forma financial statements as an aid to forecasting. Techniques of short-term cash forecasting. Differences between short-term and long-term forecasts.* Analysis of statements of changes in financial position. Illustration of the analysis of statements of changes in financial position. The analytically recast statement of changes in financial position. Evaluation of the statement of changes in financial position. Projection of statements of changes in financial position. Illustration of a projection of statements of changes in financial position: *The impact of adversity. The funds flow adequacy ratio. Funds reinvestment ratio.* Conclusion.

5. Analysis of capital structure and long-term solvency, 146

Key elements in the evaluation of long-term solvency. Importance of capital structure. Accounting principles: *Deferred taxes. Long-term leases. Off-balance sheet financing. Liabilities for pensions. Unconsolidated subsidiaries. Provisions, reserves, and contingent liabilities. Minority interests. Convertible debt. Preferred stock.* Adjustments to the book value of assets: *Inventories. Marketable securities. Intangible assets.* The significance of capital structure. Reasons for employment of debt: *The concept of financial leverage. The effect of tax deductibility of interest. Other advantages of leverage. Measuring the effect of financial leverage.* Measuring the effect of capital structure on long-term solvency. Long-term projections—usefulness and limitations. Capital structure analysis—common-size statements. Capital structure ratios. Total debt to total capital (debt and equity): *Ratio of*

total debt to total equity capital. Long-term debt/equity capital. Confusion in terminology. Short-term debt. Equity capital at market value. Preferred stock within the capital structure. The analytically adjusted ratio of debt to equity. Interpretation of capital structure measures. Measures of assets distribution. Critical importance of “earning power.” Measures of earnings coverage: Earnings available to meet fixed charges. Fixed charges to be included. Income tax adjustment of fixed charges. Other elements to be included in fixed charges. Ratio of earnings to fixed charges: Illustration of earnings-coverage ratio calculations. Ratio of earnings to fixed charges—expanded concept of fixed charges. Pro forma computations of coverage ratios. Funds flow coverage of fixed charges: Other useful tests of funds flow relationships. Stability of “flow of funds from operations.” Earnings coverage of preferred dividends. Evaluation of earnings-coverage ratios: Importance of earnings variability. Importance of method of computation and of underlying assumptions. Appendix 5A: The rating of debt obligations. Appendix 5B: Ratios as predictors of business failure. Appendix 5C: Illustration of the analytically adjusted debt-to-equity ratio.

6. Analysis of return on investment and of asset utilization, 196

Diverse views of performance. Criteria of performance evaluation. Importance of return on investment (ROI). Major objectives in the use of ROI: *An indicator of managerial effectiveness. A measure of enterprise ability to earn a satisfactory ROI. A method of projecting earnings. Internal decision and control tool.* Basic elements of ROI: *Defining the investment base. Book versus market values in the investment base. Difference between investor’s cost and enterprise investment base. Averaging the investment base. Relating income to the investment base.* Adjusting the components of the ROI formula: *Analysis and interpretation of ROI.* Analysis of asset utilization: *Evaluation of individual turnover ratios. Use of averages. Other factors to be considered in return on asset evaluation. Return on shareholders’ equity.* Analysis of return on common stockholders’ equity (ROCSE): *Equity growth rate. Analysis of financial leverage effects.*

7. Analysis of results of operations—I, 222

The significance of income statement analysis. The major objectives of income analysis: *What is the relevant net income of the enterprise?* Analysis of components of the income statement: *Accounting standards used and their implication. Tools of income statement analysis.* The analysis of sales and revenues: *Major sources of revenue.* Financial reporting by diversified enterprises: *Reasons for the need for data by significant enterprise segments. Disclosure of “line of business” data. Income statement data. Balance sheet data. Research studies. Statement of Financial Accounting Standards 14. SEC reporting requirements.*

Implications for analysis. Stability and trend of revenues. Management's discussion and analysis of financial condition and results of operations. Implications for analysis. Methods of revenue recognition and measurement.

8. Analysis of results of operations—II, 236

Analysis of cost of sales. Gross profit: *Factors in the analysis of gross profit.* Analysis of changes in gross margin. Example of analysis of change in gross margin: *Interpretation of changes in gross margin.* Break-even analysis: *Concepts underlying break-even analysis. Equation approach. Graphic presentation. Contribution margin approach. Pocket calculator problem—additional considerations. Break-even technique—problem areas and limitations. Break-even analysis—uses and their implications. Analytical implications of break-even analysis. The significance of the variable-cost percentage. The significance of the fixed-cost level. The importance of the contribution margin.* Additional considerations in the analysis of cost of sales. Depreciation. Amortization of special tools and similar costs. Maintenance and repairs costs. Other costs and expenses—general: *Selling expenses.* Bad debt expenses: *Future directed marketing costs.* General, administration, financial, and other expenses: *Financial costs. "Other" expenses.* Other income. Income taxes. Analysis of income tax disclosures: *Objectives of the analysis. Analytical steps and techniques. Illustration of income tax analysis of Alfa, Inc. Explaining the tax rate. Focus on pretax earnings.* The operating ratio. Net income ratio: *Statement accounting for variation in net income.*

9. The evaluation and projection of earnings, 270

Objectives of earnings evaluation. Evaluation of the quality of earnings: *The concept of earnings quality. Balance sheet analysis as a check on the validity and quality of reported earnings.* Evaluation of the earnings level and trend: *Factors affecting the level of earnings. The analytical, recasting, and adjustment of income statements. The recasting and adjusting procedure. The adjustment process. Determining the trend of income over the years. Income smoothing and income distortion. Income smoothing and income distortion—some implications for analysis. Extraordinary gains and losses.* The forecasting of earnings: *Can earnings be forecast? SEC disclosure requirements—aid to forecasting. Elements in earnings forecasts. Publication of financial forecasts.* The concept of earnings power: *Earning power time horizon. Adjustment of reported earnings per share.* Monitoring performance and results: *Interim financial statements. APB Opinion 28. SEC interim reporting requirements. Implications for analysis.*

10. Comprehensive analysis of financial statements, 311

The methodology of financial statement analysis. Significance of the

“building block” approach to financial analysis. The earmarks of good financial analysis. Special industry or environmental characteristics. Illustration of a comprehensive analysis of financial statements—Marine Supply Corporation: *Introduction. Financial statements. Additional information. Analysis of short-term liquidity. Cash from operations. Analysis of funds flow. Analysis of capital structure and long-term solvency. Analysis of return on investment. Analysis of asset utilization. Analysis of operating performance. Summary and conclusions.* Uses of financial statement analysis.

Appendix: The auditor’s opinion—meaning and significance, 344
