

ION CHROMATOGRAPHY IN WATER ANALYSIS

O. SHPIGUN

Department of Chemistry
Moscow State University, USSR

and

YU. A. ZOLOTOV

Vernadsky Institute of Geochemistry and Analytical Chemistry, USSR

Translation Editors:

Philip J. Cox, School of Pharmacy,
RGIT, Aberdeen

and Mary R. Masson, Department of Chemistry
University of Aberdeen

Table of contents

Summary	11
Foreword	13
Introduction	15
Chapter 1 — Fundamentals of ion-exchange chromatography	21
1.1 Ion-exchange equilibrium	21
1.2 Elution separation.	23
1.2.1 Retention volume and time	23
1.2.2 Selectivity	25
1.2.3 Efficiency	26
1.2.4 Resolution	28
1.3 General information on ion-exchangers	29
References	31
Chapter 2 — Fundamentals of ion chromatography	32
2.1 Dual-column method	32
2.2 Single-column method	35
2.3 Ion-exchange equilibrium under ion chromatographic conditions.	38
2.4 Retention of cations	39
2.5 Retention of anions	41
References	42
Chapter 3 — Sorbents	43
3.1 Requirements for sorbents	43

3.2 Anion-exchangers	44
3.3 Cation-exchangers	47
3.4 Complexing sorbents	48
3.5 The practice of sorbent selection	49
3.5.1 Particle size and column parameters	49
3.5.2 The matrix.	49
3.5.3 Functional groups	50
3.5.4 Exchange capacity.	51
3.5.5 Columns for concentration	51
3.5.6 The concentration of the ions determined.	53
References	55
Chapter 4 — Eluents	56
4.1 Dual-column method	56
4.1.1 The determination of anions	56
4.1.2 The determination of cations	57
4.2 The single-column method	58
4.2.1 The determination of anions	59
4.2.2 The determination of cations	60
4.3 The practice of eluent selection	62
4.3.1 The composition	63
4.3.2 The concentration	64
4.3.3 pH value	66
4.3.4 The elimination of extraneous peaks	68
4.3.5 The use of complexing	69
4.3.6 The influence of organic additives	71
4.3.7 Amino-acids as eluents.	72
References	75
Chapter 5 — Suppression systems.	76
5.1 Column suppression	76
5.2 Membrane suppression.	78
References	81
Chapter 6 — Detectors.	83
6.1 Requirements to be met by detectors.	83
6.2 Conductometric detectors	83
6.2.1 Theory of operation.	83
6.2.2 Types of detectors and their design	86
6.2.3 Direct detection	87
6.2.4 Indirect detection	89
6.2.5 Replacement ion chromatography	91
6.3 Other electrochemical detectors	91
6.3.1 Potentiometric detectors.	91
6.3.2 Amperometric detectors.	92

6.3.3 Coulometric detectors	93
6.4 Spectrophotometric detectors	95
6.4.1 Principles of operation and design.	95
6.4.2 Direct detection	96
6.4.3 Indirect detection	97
6.4.4 Post-column reaction	97
6.5 Choice of detectors	98
6.5.1 Non-selective detectors	98
6.5.2 Selective detectors.	99
6.5.3 Combinations of detectors	99
References	100

Chapter 7 — Chromatographic equipment	102
7.1 Dual-column ion chromatography.	102
7.2 Single-column ion chromatography	105
References	107

Chapter 8 — Determination of inorganic anions	108
8.1 Determination of anions in water as an analytical task.	108
8.2 Dual-column method	109
8.3 Single-column method	109
8.3.1 Conductometric detection.	109
8.3.2 Indirect ultraviolet detection	116
8.4 Electrochemical detection.	124
8.5 Comparison of ion chromatography with other methods	125
References	132

Chapter 9 — Determination of organic acids	134
9.1 Organic acid in waters	134
9.2 Retention of organic acids.	134
9.2.1 Monobasic aliphatic acids	134
9.2.2 Dibasic aliphatic acids	135
9.2.3 Aromatic acids	136
9.3 Ion chromatographic determination	137
9.3.1 The dual-column method	137
9.3.2 The single-column method with a conductometric detector.	137
9.3.3 The single-column method with a UV detector	140
9.4 Ion exclusion chromatography	141
9.4.1 General principles.	141
9.4.2 Determination of organic acids.	143
9.5 Combination of ion chromatography and ion exclusion chromatography	144
References	146

Chapter 10 — Determination of metals	148
---	------------

10.1	Alkali metals and ammonia	148
10.1.1	The dual-column method	148
10.1.2	The single-column method	149
10.1.2.1	Conductometric detection	149
10.1.2.2	Spectrophotometric detection	151
10.2	Alkaline-earth metals and magnesium	152
10.2.1	The dual-column method	152
10.2.2	The single-column method	155
10.2.2.1	Conductometric detection	155
10.2.2.2	Spectrophotometric detection	155
10.2.2.3	Electrochemical detection	156
10.3	Transition metals	157
10.3.1	The dual-column method	157
10.3.2	The single-column method	158
10.3.2.1	Conductometric detection	158
10.3.2.2	Spectrophotometric detection	158
10.3.2.3	Electrochemical detection	161
10.3.2.4	Other detectors	162
10.4	Anionic complexes of metals	163
10.4.1	Oxo-anions	163
10.4.2	Complexes with inorganic and organic ligands	164
	References	165
 Chapter 11 — Determination of aliphatic amines		167
11.1	Retention of amines on low-capacity cation-exchangers	167
11.2	Ion-chromatographic determination	169
	References	170
 Chapter 12 — Simultaneous determination of cations and anions		171
12.1	Use of columns connected in a series	171
12.2	Other methods	172
	References	173
 Chapter 13 — Analysis of water of various types		174
13.1	Water as the object of analysis	174
13.2	Sampling and sample preparation	174
13.3	High-purity water	175
13.4	Drinking and tap water	177
13.5	Rain water	178
13.6	Surface and ground water	179
13.7	Sea, well and highly mineralized water	180
13.8	Waste water	182
