FOREWORD	xi
PREFACE	xiii
1 INTRODUCTION	1
1.1 What Is a Polymer?	1
1.2 How Polymers Are Depicted	2
1.3 Reasons for Interest in Inorganic Polymers	3
1.4 Types of Inorganic Polymers	5
1.5 Special Characteristics of Polymers	5
2 CHARACTERIZATION OF INORGANIC POLYMERS	6
2.1 Molecular Weights	6
2.1.1 Introduction,	6
2.1.2 Types of Molecular Weights,	7
2.1.3 Experimental Techniques,	9
2.1.4 Uses for Molecular Weights,	17

2.2	Molecular Weight Distributions	17
2.2.1	<i>Importance,</i>	17
2.2.2	<i>Representation of Molecular Weight Distributions,</i>	17
2.2.3	<i>Experimental Determination,</i>	18
2.3	Other Structural Features	21
2.3.1	<i>Backbone Bonding,</i>	21
2.3.2	<i>Branching and Cross-linking,</i>	22
2.3.3	<i>Chemical and Stereochemical Variability,</i>	23
2.4	Chain Statistics	25
2.4.1	<i>Basic Goals,</i>	25
2.4.2	<i>Illustrative Models,</i>	26
2.4.3	<i>Other Configuration-Dependent Properties,</i>	27
2.4.4	<i>Minimum Energy Conformations,</i>	27
2.5	Solubility Considerations	28
2.5.1	<i>Basic Thermodynamics,</i>	28
2.5.2	<i>Problems Specific to Polymers,</i>	29
2.5.3	<i>Solubility Parameters,</i>	30
2.5.4	<i>Useful Modifications of Structure,</i>	34
2.6	Crystallinity	34
2.6.1	<i>Importance,</i>	34
2.6.2	<i>Requirements,</i>	35
2.6.3	<i>Characterization of Crystallinity,</i>	35
2.6.4	<i>Methods for Determining Percent Crystallinity,</i>	37
2.6.5	<i>Some Additional Information from X-ray Diffraction,</i>	38
2.7	Transitions	41
2.7.1	<i>Definitions,</i>	41
2.7.2	<i>Illustrative Representations,</i>	42
2.7.3	<i>Dilatometric Results,</i>	43
2.7.4	<i>Calorimetric Results,</i>	43
2.7.5	<i>Crystallization and Melting,</i>	46
2.8	Spectroscopy	50
2.8.1	<i>Infrared and Ultraviolet Spectroscopy,</i>	50
2.8.2	<i>NMR Spectroscopy,</i>	50
2.8.3	<i>Electron Paramagnetic Resonance Spectroscopy,</i>	51
2.9	Mechanical Properties	51
2.9.1	<i>Elasticity,</i>	51
2.9.2	<i>Viscosity,</i>	54
2.9.3	<i>Viscoelasticity,</i>	55
2.10	References	59

3 POLYPHOSPHAZENES**61**

- 3.1 Introduction 61
- 3.2 History 64
- 3.3 The Three Synthesis Routes 68
 - 3.3.1 *The Macromolecular Substitution Route*, 68
 - 3.3.2 *Polymerization of Organo- or Organometallo-Substituted Cyclic Phosphazenes*, 72
 - 3.3.3 *Synthesis of Poly(organophosphazenes) by Condensation Reactions*, 75
- 3.4 The Ring-Opening Polymerization Mechanism 77
- 3.5 Small-Molecule Models 79
- 3.6 Molecular Structure of Polyphosphazenes 81
 - 3.6.1 *Side Group Disposition*, 81
 - 3.6.2 *Macromolecular Conformations*, 84
 - 3.6.3 *Bonding in Polyphosphazenes*, 86
 - 3.6.4 *Skeletal Flexibility*, 87
- 3.7 Structure-Property Relationships 88
 - 3.7.1 *Crystalline Versus Amorphous Polymers*, 88
 - 3.7.2 *Hydrophobic Versus Hydrophilic or Water Soluble*, 88
 - 3.7.3 *Water Stable Versus Water "Erodible,"* 90
 - 3.7.4 *High- T_g Versus Low- T_g Polymers*, 90
 - 3.7.5 *Materials Structure Imposed by Side Group Stacking*, 90
- 3.8 Advanced Elastomers 91
- 3.9 Fiber- and Film-Forming Polyphosphazenes 94
- 3.10 Polyphosphazenes as Biomedical Materials 95
 - 3.10.1 *Background*, 95
 - 3.10.2 *Solid, Bioinert, Polyphosphazenes*, 95
 - 3.10.3 *Solid Polymers with Hydrophilic or Bioactive Surfaces*, 96
 - 3.10.4 *Bioerodible Polyphosphazenes*, 103
 - 3.10.5 *Amphiphilic Polymers and Membrane Materials*, 112
 - 3.10.6 *Hydrogels Derived from Polyphosphazenes*, 113
 - 3.10.7 *Water-Soluble, Bioactive Polymers*, 114

- 3.11 Organometallic Polyphosphazenes 118
 - 3.11.1 *Coordination, 119*
 - 3.11.2 *Metals Linked to the Skeleton through Organic or Inorganic Spacer Groups, 119*
 - 3.11.3 *Polyphosphazenes with Metal-Phosphorus Bonds, 122*
- 3.12 Liquid Crystalline and High Refractive Index Polymers 122
 - 3.12.1 *Liquid Crystalline Polyphosphazenes, 125*
 - 3.12.2 *Polyphosphazenes with Polyaromatic Side Units, 127*
- 3.13 Polycarbophosphazenes and Polythiophosphazenes 128
- 3.14 Other Types of Polyphosphazenes 130
 - 3.14.1 *Organic Polymers with Cyclophosphazene Side Groups, 130*
 - 3.14.2 *Cyclolinear and Cyclomatrix Materials, 131*
 - 3.14.3 *Inorganic Ceramics Derived from Phosphazenes, 133*
- 3.15 Conclusions 133
- 3.16 References 136

4 POLYSILOXANES AND RELATED POLYMERS

141

- 4.1 Introduction 141
- 4.2 History 142
- 4.3 Nomenclature 142
- 4.4 Preparation and Analysis 143
 - 4.4.1 *Preparation of Monomers, 143*
 - 4.4.2 *Ring-Opening Polymerizations, 144*
 - 4.4.3 *Copolymerization, 145*
 - 4.4.4 *Structural Features, 145*
 - 4.4.5 *Elastomer Technology, 146*
 - 4.4.6 *Analysis and Testing, 148*
- 4.5 General Properties 150
 - 4.5.1 *Conformations and Spatial Configurations, 150*
 - 4.5.2 *Flexibility of the Polymer Chains, 155*
 - 4.5.3 *Permeability, 158*
 - 4.5.4 *Stability, Safety Aspects, and Environmental Impact, 160*

- 4.5.5 *Some Additional Unusual Properties of Poly(dimethylsiloxane), 161*
- 4.6 **Reactive Homopolymers 162**
 - 4.6.1 *Types of Reactions, 162*
 - 4.6.2 *Block Copolymers, 163*
 - 4.6.3 *Elastomeric Networks, 163*
 - 4.6.4 *Trapping of Cyclic Oligomers, 166*
- 4.7 **Copolymers and Interpenetrating Networks 168**
 - 4.7.1 *Random Copolymers, 168*
 - 4.7.2 *Block Copolymers, 168*
 - 4.7.3 *Interpenetrating Networks, 168*
- 4.8 **Applications 169**
 - 4.8.1 *Medical, 169*
 - 4.8.2 *Nonmedical, 170*
- 4.9 **Silica-Type Materials (Ultrastructures) 173**
 - 4.9.1 *Sol-Gel Ceramics, 173*
 - 4.9.2 *In-Situ Preparations of Multiphase Systems, 173*
- 4.10 **References 177**

5 POLYSILANES AND RELATED POLYMERS

186

- 5.1 **Introduction 186**
- 5.2 **History 187**
- 5.3 **Synthesis 190**
 - 5.3.1 *Condensation of Dichlorosilanes with Alkali Metals, 190*
 - 5.3.2 *Disilene or Silylene Polymerization, 196*
 - 5.3.3 *Dehydrogenative Coupling, 198*
 - 5.3.4 *Other Polymerization Reactions, 201*
- 5.4 **Chemical Modification of Polysilanes 201**
- 5.5 **Physical Properties of Polysilanes 204**
- 5.6 **Electronic Properties and Conformation 206**
 - 5.6.1 *Electron Delocalization, 206*
 - 5.6.2 *Solid Polysilanes—Electronic Properties and Conformation, 211*
 - 5.6.3 *Mesophases and Liquid Crystalline Polysilanes, 212*
 - 5.6.4 *Electrical Conductivity and Photoconductivity, 213*
- 5.7 **Photodegeneration of Polysilanes 216**
- 5.8 **Cross-linking 217**
 - 5.8.1 *Photolysis of Alkenyl-Substituted Polysilanes, 217*

- 5.8.2 *Free-Radical Cross-linking with Polyunsaturated Additives*, 217
- 5.8.3 *Chemical Cross-linking of Hydrosilylene Polymers, "Room Temperature Vulcanizing,"* 218
- 5.9 Structures of Polysilanes 219
 - 5.9.1 *Configuration and Stereochemistry*, 219
 - 5.9.2 *Ordering in Copolymers*, 222
 - 5.9.3 *Network Polysilanes*, 224
 - 5.9.4 *Copolymers with Other Monomers*, 226
- 5.10 Technology of Polysilanes 228
 - 5.10.1 *Precursors to Silicon Carbide*, 228
 - 5.10.2 *Polysilanes as Photoresists*, 229
 - 5.10.3 *Polysilanes as Photoinitiators*, 231
- 5.11 Additional Reading 233
- 5.12 References 233

6 MISCELLANEOUS INORGANIC POLYMERS

237

- 6.1 Introduction 237
- 6.2 Other Phosphorus-Containing Polymers 237
- 6.3 Other Silicon-Containing Polymers 241
- 6.4 Polygermanes 243
- 6.5 Polymeric Sulfur and Selenium 244
 - 6.5.1 *Polymeric Sulfur*, 244
 - 6.5.2 *Polymeric Selenium*, 246
- 6.6 Other Sulfur-Containing Polymers 247
- 6.7 Boron-Containing Polymers 252
- 6.8 Aluminum-Containing Polymers 254
- 6.9 Tin-Containing Polymers 255
- 6.10 Metal Coordination Polymers 256
 - 6.10.1 *A Survey of Typical Structures*, 256
 - 6.10.2 *Metalloporphyrin Polymers*, 259
 - 6.10.3 *Cofacial Phthalocyanine Polymers*, 259
- 6.11 Other Organometallic Species for Sol-Gel Processes 261
- 6.12 References 261
