

# **Growth Dynamics of the Energy Dependent Economy**

by

**Reiner Kümmel**

University of Würzburg  
Department of Physics

**Verlag Anton Hain**  
Meisenheim GmbH  
Königstein/Ts.

**Oelgeschlager, Gunn & Hain**  
Publishers, Inc.  
Cambridge, Massachusetts

## Table of Contents

Introduction	1
I. BASIC EQUATIONS OF GROWTH DYNAMICS	7
1. The Process of Industrial Production	7
2. The Elasticities of Production and the Definition of Capital	13
3. The Pollution Function	24
II. THE CONCEPTUAL AND MATHEMATICAL STRUCTURE OF GROWTH THEORY	31
1. Creativity, System Characteristics, and Growth Intervals	31
2. Independent Variables	33
3. Integrability Conditions	41
4. Total Automation and Maximum Degree of Capital Utilization	45
5. Growth Controlling Extremum Principles	53
5.1 Minimization of Cost	55
5.2 The Magnitude of Production	60
5.2.1 Maximization of Profit	61
5.2.2 Maximization of Production	62
5.2.3 Optimization of Production	62
5.3 Profit, Energy, and Marxism's Theory of Pauperization	63
III. SOLUTIONS AND GROWTH SCENARIOS	66
1. The Elasticities of Production $\alpha$ and $\beta$ and the Integrability Conditions	66
2. The Differential Equation for the Work Function	71
3. Boundary Conditions	73
3.1 The Boundary Conditions on the Work Function	73
3.2 The Boundary Conditions on $\alpha$ and $\beta$	75
4. Trial Functions for $\alpha$ and $\beta$	77
4.1 The Ansatz $\alpha = f\left(\frac{L+E}{K}\right)$ and the Resulting $\beta$	77
4.2 Linear $\alpha = a \frac{L+E}{K}$ and Linear $\beta$	79

5. Paths of Balanced Economic Growth and Integration of the Equation of Growth	87
6. Energy Crises and Comparison of Theory with Reality	95
6.1 Economic Development and Energy Crisis in the Federal Republic of Germany in the Years 1970-1976	96
6.1.1 The Empirical Data and their Interpretation	96
6.1.2 Theoretical Growth of Production in the Federal Republic of Germany During the Years 1970-1976	101
6.2 "Best" and "Worst" Scenario for a Reduction of Energy Input by 25 %	106
7. Environmental Problems, Space, and the Law of Diminishing Returns	109
8. Growth into Space	114
8.1 Solar Power Satellites	117
8.2 Space Industrialization	120
8.3 Challenge and Response	125
References	127
