Mathematical Programming

199

Evaluating Mathematical Programming Techniques

Proceedings of a Conference
Held at the National Bureau of Standards
Boulder, Colorado
January 5–6, 1981

FB Mathematik TUD
58339911

Edited by John M. Mulvey

Fachbereich Mathematik
Technische Hochschule Darmstadt
Bibliothek
Inv.-Nr. B 19 306

Springer-Verlag
Berlin Heidelberg New York 1982

TABLE OF CONTENTS

Opening Address (Darwin Klingman) 1

1. Design and Use of Problem Generators and Hand Selected Test Cases

Test problems for computational experiments -- issues and techniques
(Ronald L. Rardin and Benjamin W. Lin) 8

NETGEN-II: A system for generating structured network-based mathematical programming test problems
(Joyce J. Elam and Darwin Klingman) 16

The definition and generation of geometrically random linear constraint sets
(Jerrold H. May and Robert L. Smith) 24

Construction of nonlinear programming test problems with known solution characteristics
(Gideon Lidor) 35

A comparison of real-world linear programs and their randomly generated analogs
(Richard O'Neill) 44

2. Nonlinear Optimization Codes and Empirical Tests

Evidence of fundamental difficulties in nonlinear optimization code comparisons
(Ernie Eason) 60

A statistical review of the Sandgren-Ragsdell comparative study
(Eric Sandgren) 72

A methodological approach to testing of NLP-software
(Jacques C.P. Bus) 91

3. Integer Programming and Combinatorial Optimization

A computational comparison of five heuristic algorithms for the Euclidean traveling salesman problem
(William R. Stewart, Jr.) 104

Implementing an algorithm: performance considerations and a case study
(Uwe Suhl) 117

Which options provide the quickest solutions
(William J. Riley and Robert L. Sielken, Jr.) 135

An integer programming test problem generator
(Michael Chang and Fred Shepardson) 146

4. Comparative Computational Studies in Mathematical Programming

Introduction
(Ron S. Dembo) 161

Remarks on the evaluation of nonlinear programming algorithms
(David M. Himmelblau) 163

Comments on evaluating algorithms and codes for mathematical programming
(Robert B. Schnabel) 166

Some comments on recent computational testing in mathematical programming
(Jacques C.P. Bus) 170

Remarks on the comparative experiments of Miele, Sandgren and Schittkowski
(Ken M. Ragsdell) 174

5. Testing Methodologies

In pursuit of a methodology for testing mathematical programming software
(Karla L. Hoffman and Richard H.F. Jackson) 177

Nonlinear programming methods with linear least squares subproblems
(Klaus Schittkowski) 200

An outline for comparison testing of mathematical software -- illustrated by comparison testings of software which solves systems of nonlinear equations
(Kathie L. Hiebert) 214

A portable package for testing minimization algorithms
(A. Buckley) 226

6. Approaches to Software Testing from Other Disciplines

Transportable test procedures for elementary function software
(William J. Cody) 236

Testing and evaluation of statistical software
(James E. Gentle) 248

TOOLPACK -- An integrated system of tools for mathematical software development
(Leon J. Osterweil) 258

Overview of testing numerical software
(Lloyd D. Fosdick) 268

The application of Halstead's software science difficulty measure to a set of programming projects
(Charles P. Smith) 277

7. Special Topics

Mathematical programming algorithms in APL
(Harlan Crowder) 290

8. Advances in Networks

Solution strategies and algorithm behavior in large-scale network codes (Richard S. Barr) 305

Recursive piecewise-linear approximation methods for nonlinear networks (Robert R. Meyer) 315

Computational testing of assignment algorithms (Michael Engquist) 323

9. On Establishing a Group for Testing Mathematical Programs

Introduction (John M. Mulvey) 329

Panel Discussion

10. Appendix

Conference program 337

List of participants 340

A model for the performance evaluation in comparative studies (Klaus Schittkowski) 343

Remarks on the comparative evaluation of algorithms for mathematical programming problems (Angelo Miele) 350

Comments on a testing center (Angelo Miele) 353

Systematic approach for comparing the computational speed of unconstrained minimization algorithms (Salvador Gonzalez) 355

The evaluation of optimization software for engineering design (Ken Ragsdell) 358
