List of Symbols	xvi
------------------------	------------

1	Introduction	1
----------	---------------------	----------

- 1.1 A Brief History of the Finite Element Method, 3
- 1.2 Types of Elements, 5
- 1.3 Some Applications of Finite Elements, 7
- 1.4 General-Purpose Programs, 15

2	Definitions and Basic Element Operations	20
----------	-------------------------------------------------	-----------

- 2.1 Coordinate System, 21
- 2.2 The Basic Element Idealization, 25
- 2.3 Element Force-Displacement Properties, 30
- 2.4 Work and Energy, 34
- 2.5 Reciprocity, 36
- 2.6 Flexibility-Stiffness Transformation, 37
- 2.7 Transformation of d.o.f., 41
- 2.8 Condensation, 44
- 2.9 Detection of Rigid Body Modes, 46

3	Global Analysis Procedures	53
3.1	Direct Stiffness Method—Its Basic Concept, 54	
3.2	The Direct Stiffness Method—The General Procedure, 56	
3.3	Congruent Transformation Approach to Stiffness Analysis, 60	
3.4	Resume of Finite Element Advantages, 71	
3.5	Special Operations, 74	
4	Basic Relationships of Elasticity Theory	90
4.1	Equilibrium Differential Equations, 91	
4.2	Boundary Conditions on Stress, 93	
4.3	Strain-Displacement and Compatibility Equations, 95	
4.4	Material Constitutive Relationships, 99	
4.5	Equilibrium and Compatibility Differential Equations, 101	
4.6	Concluding remarks, 103	
5	Direct Methods of Element Formulation	108
5.1	Direct Method, 109	
5.2	Triangular Element in Plane Stress, 118	
5.3	Limitations of the Direct Method, 123	
5.4	The Direct Method in Nonstructural Problems, 125	
5.5	Method of Weighted Residuals, 126	
6	Variational Methods of Element Formulation	135
6.1	Principle of Virtual Work, 136	
6.2	Calculus of Variations, 144	
6.3	The Discretized Variational Problem, 150	
6.4	Minimum Potential Energy, 153	
6.5	Displacement Hybrid and Generalized Potential Energy Formulations, 161	
6.6	Minimum Complementary Energy, 170	
6.7	Assumed Stress Hybrid Approach, 174	
6.8	Reissner Energy and Alternative Functionals, 177	
6.9	An Overview and Summary, 181	
7	Variational Principles in Global Analysis	189
7.1	Minimum Potential Energy Principle, 190	
7.2	Lower Bound Character of Minimum Potential Energy Solution, 192	
7.3	Constraint Equations by the Lagrange Multiplier Method, 196	

- 7.4 Generalized Potential Energy Approach, 199
- 7.5 Minimum Complementary Energy Principle, 201
- 7.6 Upper Bound Character of Minimum Complementary Energy Solution, 207

8 Representation of Element Behavior Functions and Geometry 211

- 8.1 Requirements on Representation of Element Behavior Functions, 212
- 8.2 Polynomial Series, 214
- 8.3 Direct Construction of Shape Functions Through Interpolation, 218
- 8.4 Rectangular Elements, 224
- 8.5 Triangular Elements, 229
- 8.6 Tetrahedral Elements, 235
- 8.7 Internal Modes and Reduction to Simpler Forms, 238
- 8.8 Isoparametric Representation, 241

9 Plane Stress 249

- 9.1 Basic Relationships, 250
- 9.2 Triangular Plane Stress Elements, 254
- 9.3 Rectangular Elements, 272

10 Solid Elements: General Case 287

- 10.1 Basic Relationships, 289
- 10.2 Tetrahedral Element Formulations, 292
- 10.3 Rectangular Hexahedral Elements, 297
- 10.4 Numerical Comparisons, 301
- 10.5 Isoparametric Representation and the Analysis of Shells with Use of Solid Elements, 304

11 Solid Elements: Special Cases 308

- 11.1 Plane Strain, 309
- 11.2 Axisymmetric Solids, 311
- 11.3 Nonaxisymmetric Loads, 316
- 11.4 Specified Volume Change—Incompressibility, 321

12 Flat Plate Bending 327

- 12.1 Plate Flexure Theory, 328
- 12.2 Rectangular Elements, 338
- 12.3 Triangular Elements, 345
- 12.4 Deflections Due to Transverse Shear, 361
- 12.5 Removal of Constraint on Transverse Shear Deformation (Discrete-Kirchhoff Procedure), 364

- 12.6 Effectiveness of Solid Elements for Plate Bending Analysis, 368
- 12.7 Concluding Remarks, 369

13 Elastic Instability Analysis

379

- 13.1 General Theory—Linear Stability Analysis, 380
- 13.2 Global Formulation, 385
- 13.3 Prismatic Members, 388
- 13.4 Flat Plate Elements, 399
