# **Structures with Hollow Sections**

# Contents

<b>1</b>	<b>Introduction</b> .....	<b>1</b>
<b>2</b>	<b>Manufacture of steel hollow sections</b> .....	<b>21</b>
2.1	General .....	21
2.2	The manufacture of seamless tubes .....	21
2.2.1	The skew roll piercing and pilger rolling process .....	23
2.2.2	The push bench process .....	24
2.2.3	The plug rolling process .....	24
2.2.4	The extrusion process .....	25
2.2.5	The continuous rolling process .....	25
2.3	The manufacture of welded tubes .....	25
2.3.1	The submerged-arc welding process .....	26
2.3.2	The gas-shielded arc welding process .....	27
2.3.3	The continuous pressure welding process (Fretz-Moon) .....	28
2.3.4	The electric resistance pressure welding process .....	28
2.4	The stretch-reducing or reducing process .....	28
2.5	The manufacture of rectangular and square hollow sections .....	29
2.6	The manufacture of hollow sections with further shapes .....	29
2.7	The testing of steel hollow sections .....	29
<b>3</b>	<b>Structural hollow section steel grades</b> .....	<b>33</b>
3.1	General .....	33
3.2	Selection of steel grades for structural design .....	41
<b>4</b>	<b>Dimensions, tolerances and sectional properties of circular, square and rectangular hollow sections</b> .....	<b>45</b>
4.1	General .....	45
4.2	Geometrical and sectional properties of hollow sections .....	47
4.2.1	Circular hollow sections (CHS) .....	48
4.2.2	Rectangular, including square, hollow sections (RHS) .....	48
4.2.3	Larger dimensions of square and rectangular hollow sections (RHS) .....	49
<b>5</b>	<b>Design bases for hollow sections in steel structures</b> .....	<b>51</b>
5.1	General .....	51
5.2	Partial safety factors .....	52
5.2.1	Actions and their partial safety factors .....	53
5.2.2	Resistances and their partial safety factors .....	54
5.3	Design resistances of cross sections .....	56
5.3.1	Hollow sections in axial force .....	56
5.3.2	Hollow sections in bending and shear .....	57
5.3.2.1	Design for pure uni-axial bending .....	57

5.3.2.2	Combined uni-axial bending and axial force (without considering shear) . .	58
5.3.2.3	Combined bi-axial bending and axial force (without considering shear) . . .	58
5.3.2.4	Stress design of hollow sections in shear . . . . .	59
5.3.2.5	Design for bending considering shear . . . . .	59
5.3.2.6	Equivalent stress for combined axial force and shear . . . . .	61
5.3.3	Stability cases – flexural (overall) and local buckling of hollow sections . .	61
5.3.3.1	Design for flexural buckling . . . . .	61
5.3.3.2	Local buckling of hollow sections . . . . .	66
5.3.3.3	Hollow sections in combined compression and bending . . . . .	77
5.3.3.4	Buckling length . . . . .	82
5.3.3.5	Design examples . . . . .	86
5.3.4	Hollow sections in torsion . . . . .	88
5.4	List of symbols . . . . .	90
<b>6</b>	<b>Structural elements and constructions with hollow sections under predominantly static loading</b> . . . . .	<b>93</b>
6.1	Single section beams . . . . .	94
6.2	Columns . . . . .	94
6.2.1	Column-to-truss connections . . . . .	96
6.2.2	Beam-to-column connections . . . . .	98
6.3	Arched girders . . . . .	102
6.4	Knee joints . . . . .	103
6.4.1	Knee joints with circular hollow sections . . . . .	107
6.5	End-to-end connections . . . . .	108
6.5.1	Indirectly joined bolted connections . . . . .	108
6.5.2	Indirectly joined welded connections . . . . .	121
6.5.3	Directly joined welded connections . . . . .	122
6.6	Lattice girders (trusses) . . . . .	126
6.6.1	Single plane lattice girders with hollow sections . . . . .	128
6.6.1.1	Economical aspects regarding the selection of lattice girder types with hollow sections . . . . .	130
6.6.2	Design arrangement of truss joints with hollow sections consisting of directly welded chord and bracing members . . . . .	130
6.6.3	Weld seams in trusses with hollow sections consisting of directly welded bracing and chord members . . . . .	135
6.6.3.1	Design of welds in truss joints . . . . .	138
6.6.3.2	Weld sequences for truss joints . . . . .	141
6.6.3.3	Weld lengths in truss joints . . . . .	142
6.6.4	Analysis of the strength (resistance) behaviour of a truss with hollow sections . . . . .	144
6.6.4.1	Design strengths of truss joints with directly welded bracing and chord members . . . . .	147
6.6.4.2	Design strengths of reinforced truss joints under predominantly static loading . . . . .	171
6.6.4.3	Design of truss joints with cranked chord . . . . .	175
6.6.4.4	Design strengths of uni-planar welded truss joints with I or H section as chord and hollow sections as bracings . . . . .	175
6.6.4.5	Design strengths of uni-planar welded truss joints with C-profile (channel) as chord and hollow sections as bracings . . . . .	179
6.6.5	Design of uni-planar trusses with directly welded hollow sections . . . . .	183

6.6.6	Design strengths of special uni-planar welded truss joints of circular hollow sections (CHS) . . . . .	186
6.6.7	Design strengths of multi-planar welded truss joints . . . . .	186
6.6.8	Joints with bracings of circular hollow sections with flattened ends . . . . .	193
6.6.9	Joints with rectangular or square hollow sections (RHS) in a double-chord truss . . . . .	204
6.7	Hollow section joints in Vierendeel trusses loaded by bending moment . . . . .	207
6.7.1	RHS T joints under in-plane bending moment $M_{ip}$ . . . . .	208
6.7.2	RHS X joints under in-plane bending moment $M_{ip}$ . . . . .	212
6.7.3	Interaction between axial force $N_i$ and in-plane bending moment $M_{ip}$ in RHS T and X joints . . . . .	212
6.7.4	Design of welded RHS T joints under axial force $N_i$ and in-plane bending moment $M_{ip}$ with the aid of the design diagrams . . . . .	212
6.7.5	CHS T, Y and X joints under $M_{ip}$ . . . . .	214
6.7.6	RHS T joints in Vierendeel girders . . . . .	216
6.7.7	Design resistances of CHS and RHS joints under out-of-plane bending moment $M_{op}$ . . . . .	219
6.7.7.1	Design resistances of RHS joints under $M_{op}$ . . . . .	219
6.7.7.2	Design resistances of CHS joints under $M_{op}$ . . . . .	219
6.8	Design resistances of T and X connections of plates, I-profiles or RHS sections to CHS or RHS . . . . .	220
6.8.1	T and X connections with CHS chord members . . . . .	220
6.8.2	T connections with RHS chord members . . . . .	223
6.9	Design of beam-to-column connections . . . . .	223
6.9.1	RHS column with I-beam . . . . .	223
6.9.2	I section column with RHS beam . . . . .	225
6.10	Special joint of RHS chord and RHS bracing with “bill-shaped” or “bird-mouth” end . . . . .	226
6.11	List of symbols . . . . .	227
<b>7</b>	<b>Design of welded hollow section joints subjected to fatigue loading . . . . .</b>	<b>231</b>
7.1	General . . . . .	231
7.2	Fatigue resistance for cumulative load (load spectrum) . . . . .	235
7.3	Effect of residual stresses on the fatigue resistance of hollow section joints . . . . .	236
7.4	Effect of corrosive environment on the fatigue of hollow section joints . . . . .	238
7.5	Stress or strain distribution in hollow section joints . . . . .	238
7.5.1	Stress concentration factor SCF and strain concentration factor SNCF . . . . .	243
7.5.1.1	Experimental measurement of strains with strain gauges . . . . .	243
7.5.1.2	Theoretical determination of stresses or strains using “finite element” analysis . . . . .	245
7.5.1.3	Determination of stress or strain concentration factors (SCF or SNCF) . . . . .	247
7.5.1.4	Determination of total hot spot stress range $S_{r,hs,total}$ using stress concentration factors . . . . .	249
7.5.1.5	Parametric formulae for the determination of stress concentration factors for welded hollow section joints . . . . .	251
7.6	Effect of secondary bending moments on the fatigue strength of RHS and CHS truss joints of K and N type . . . . .	283
7.7	Basic “ $S_{r,hs}$ vs. $N_F$ ” lines for welded uni-planar CHS and RHS (square) joints (T, X, K, N and KT) . . . . .	284

7.7.1	Correction factors accounting for the wall thickness of the applicable member (chord and bracing) being checked for fatigue cracking and the fatigue lines " $S_{r,hs}$ vs. $N_F$ "	286
7.7.2	Application of high strength steels	288
7.8	Basic " $S_{r,hs}$ vs. $N_F$ " lines for welded multi-planar CHS and square hollow section joints (TT, XX and KK)	290
7.9	Design procedure for welded, uni-planar or multi-planar CHS or RHS (square) truss joints subjected to fatigue loading	291
7.10	Fatigue strength design procedure for hollow section connections and truss joints using the "classification" method	293
7.10.1	CHS connections with splice plates	296
7.10.2	Recommendation for the modification of the detail categories for the hollow section joints according to EC 3	300
7.11	Effect of the local reinforcement by plates on the fatigue strength of RHS joints	303
7.12	Repair and reconstruction of hollow section joints in the critical zones susceptible to ruptures by cracks	303
7.12.1	Application of a crack stopper in the form of a drilled hole	306
7.12.2	Grinding or gouging of the crack and rewelding	306
7.12.3	Mounting a plate or a shell on the chord flange (crack in the chord flange)	307
7.12.4	Fitting RHS angle pieces	308
7.13	Improvement of fatigue strength applying mechanical and thermal processes	308
7.13.1	Post-weld heat treatment	309
7.13.2	Shot peening and hammer peening	309
7.13.3	Overloading of a structural element	309
7.13.4	Stress relieving vibration	310
7.13.5	Grinding of weld transition zones	310
7.13.6	TIG or plasma post-treatment	311
7.14	Fatigue of bolted flange connections	311
7.15	List of symbols	314
<b>8</b>	<b>Fabrication, assembly and transport of hollow section structures</b>	<b>317</b>
8.1	General	317
8.2	Cutting	318
8.2.1	Flame cutting	318
8.2.1.1	Manual flame cutting	319
8.2.1.2	Automatic flame cutting by machines	320
8.2.2	Sawing	322
8.2.3	Plasma cutting	325
8.2.4	Laser cutting	325
8.3	Slotting	326
8.4	Flattening of hollow section ends	327
8.5	Bending (arching) of hollow sections	327
8.5.1	Cold bending of CHS	329
8.5.1.1	Cold bending by pressing	329
8.5.1.2	Cold bending using a "former" box	329
8.5.1.3	Cold bending with a three-roller bender	329
8.5.1.4	Arches by means of mitre cuts	330
8.5.2	Cold bending of RHS	330

8.5.2.1	Cold bending by pressing	330
8.5.2.2	Arches by means of a) mitre cuts or b) "V" cutouts	330
8.5.2.3	Cold bending with a three-roller bender	330
8.5.3	Hot bending of hollow sections	331
8.5.3.1	Hot bending of hollow sections filled up with sand	331
8.5.3.2	"Hamburger arch" (CHS only)	331
8.5.3.3	Bending with inductive heating	331
8.5.3.4	Hot bending with a three-roller bender	331
8.5.3.5	Cambering	332
8.6	Bolting	332
8.6.1	Blind bolting	333
8.6.1.1	Flow drill	333
8.6.1.2	Lindapter Hollo-Fast	334
8.6.1.3	Huck Ultra-Twist	334
8.7	Welding	335
8.7.1	Hollow Section steel grades and their weldability	335
8.7.2	Methods for welding hollow section joints	336
8.7.2.1	Manual shielded metal arc welding with stick electrodes coated with shielding flux material	337
8.7.2.2	Gas metal arc welding GMAW	338
8.7.2.3	Flux cored arc welding FCAW	339
8.7.2.4	Submerged arc welding SAW	339
8.7.3	Preparation of the welds in hollow section structures	339
8.7.4	Welding positions and sequences	339
8.7.5	Tack welding	340
8.7.5.1	Plug and slot welding	341
8.7.6	Post-heat treatment of welded constructions of hollow sections	342
8.7.7	Residual stress and deformation due to welding and their reduction measures	342
8.7.8	Weld defects and their repairs	343
8.7.9	Inspection of welds	343
8.7.9.1	Visual inspection	345
8.7.9.2	Magnetic particle test	345
8.7.9.3	Dye penetration test	345
8.7.9.4	Ultrasonic inspection	346
8.7.9.5	Radiographic inspection by X or $\gamma$ rays	346
8.7.10	Performance qualification tests for welders and welding workshops	347
8.7.11	Welding of cold formed hollow sections	348
8.7.12	Stud welding	348
8.7.13	Laser welding	349
8.7.14	General recommendations for welding	349
8.8	Nailing	351
8.9	Application of cast steel elements in hollow section structures	352
8.10	Assembly	361
8.11	Transport of hollow sections and their structures	363
8.12	List of symbols	364
<b>9</b>	<b>Space structures</b>	<b>367</b>
9.1	General	367
9.2	Constructional elements of space structures	368

9.3	Assembly and erection of space frames .....	370
9.4	Calculation of space structures .....	372
9.5	Economic optimization of space structures .....	373
9.6	Further remarks to the design of space structures .....	373
<b>10</b>	<b>End fixity of rectangular hollow section columns in a concrete fundament .....</b>	<b>377</b>
<b>11</b>	<b>Hollow sections in composite construction .....</b>	<b>381</b>
11.1	Hollow section composite columns .....	381
11.1.1	Design strength (resistance) of hollow section composite columns .....	382
11.1.1.1	General .....	382
11.1.1.2	Methodically concentric axial compression .....	383
11.1.1.3	Effect of long-term behaviour of concrete on the design strength (resistance) of slender columns .....	384
11.1.1.4	Increased design strength (resistance) for compact CHS columns filled up with concrete .....	384
11.1.1.5	Design strength (resistance) of composite hollow section columns under compression and uni-axial bending .....	385
11.1.1.6	Ultimate strength (resistance) of a hollow section cross section under compression and bending .....	387
11.1.1.7	Design strength (resistance) of composite hollow section columns under compression and bi-axial bending .....	388
11.1.1.8	Approximate calculation for M-N-interaction in composite hollow section columns .....	393
11.1.1.9	Influence of shear forces .....	395
11.1.1.10	Load introduction .....	395
11.2	Truss joints in RHS with concrete-filled chord members .....	397
11.3	Fabrication of concrete-filled hollow section columns .....	399
11.3.1	Structural components .....	399
11.3.1.1	Hollow sections .....	399
11.3.1.2	Concrete .....	399
11.3.1.3	Reinforcements .....	400
11.3.2	Concrete filling operation methods .....	401
11.3.2.1	Connections of concrete-filled hollow section columns from floor to floor in a building .....	403
11.4	List of symbols .....	404
<b>12</b>	<b>Corrosive behaviour and protection against corrosion of steel hollow sections and their structures .....</b>	<b>405</b>
12.1	General .....	405
12.2	Internal corrosion of hollow sections and their structures .....	405
12.3	External corrosion of hollow sections and their structures .....	407
12.4	Protection measures against corrosion .....	408
12.4.1	Coatings for protection against corrosion .....	408
12.4.1.1	Corrosion protection with a "shop primer" .....	409
12.4.2	Metallic coating by spraying .....	410
12.4.2.1	Hot dip galvanization .....	410
12.4.2.2	Zinc coating in galvanic bath .....	413

12.4.3	Electrochemical polarisation	413
12.4.4	Application of hollow sections of weathering steels	413
<b>13</b>	<b>Structural hollow sections exposed to fire</b>	<b>415</b>
13.1	General	415
13.2	Design resistance of unprotected and unfilled steel hollow sections	418
13.2.1	Design resistance of hollow section members under tension	419
13.2.2	Design resistance of hollow section members with a uniform temperature $\theta_a$ under combined axial tension and bending moment	419
13.2.3	Design buckling resistance of hollow section members with class 1, class 2 or class 3 cross sections with a uniform temperature $\theta_a$ under axial compression	420
13.2.4	Design buckling resistance of hollow section members with class 1 and class 2 cross sections with a uniform temperature $\theta_a$ under axial compression and bending moment	420
13.2.5	Simplified design of a hollow section column exposed to fire under concentric and eccentric axial compressive load	420
13.3	External protection against fire	421
13.3.1	External fire insulations	421
13.3.2	Fire protection paints	422
13.3.3	Design of external insulation	422
13.4	Fire protection of steel hollow sections by water cooling	423
13.4.1	Fundamentals to water cooling systems	423
13.4.2	Design of water cooling installations	427
13.5	Fire protection of steel hollow section columns by filling with concrete	428
13.5.1	Fundamentals	428
13.5.2	Fire design of concrete filled hollow section columns without external insulation	431
13.5.2.1	Level 1 design: tabulated data	431
13.5.2.2	Level 2 design: simple design diagrams	431
13.5.2.3	Level 3 design: general calculation method	462
13.5.3	Fire protection of hollow section columns filled by concrete with steel fibre reinforcement without external insulation	462
13.6	Fire protection of hollow section column to beam connections	463
13.6.1	Unfilled hollow section columns with or without external insulation	463
13.6.2	Concrete filled hollow section columns	463
13.6.3	Water cooled hollow section columns	465
13.7	List of symbols	465
<b>14</b>	<b>Wind loads on circular and rectangular hollow sections and their lattice structures</b>	<b>467</b>
14.1	General	467
14.2	Wind loads on single circular cylinders	467
14.3	Wind loads on single square cylinders	469
14.4	Wind loads on lattice structures in circular hollow sections	470
14.4.1	Approximate calculation of wind loads on lattice masts	471
14.5	Wind force coefficients for circular hollow section cylinders and their lattice structures according to DIN 1055-4, Issue 8/86 and EC 1	476
14.6	Wind loads of uni-planar and multi-planar lattice structures with square hollow sections	477

14.6.1	Uni-planar lattice structures .....	480
14.6.2	Multi-planar (space) lattice structures with square or rectangular plan ....	480
14.6.3	Design example .....	481
14.7	Wind loads according to Eurocode 1 .....	483
14.7.1	Wind loads .....	483
14.7.1.1	Wind force coefficients $C_f$ for rectangular hollow sections with rounded-off corners .....	483
14.7.1.2	Wind force coefficients $C_f$ for CHS members with $\lambda = l/d$ .....	483
14.7.1.3	Wind force coefficients $C_f$ for lattice structures and scaffolding .....	483
14.8	List of symbols .....	486
<b>Appendix I</b>	Nominal sizes and geometric properties of cold formed circular hollow sections according to EN 10219-2 .....	489
	Nominal sizes and geometric properties of hot finished circular hollow sections according to EN 10219-2 .....	496
<b>Appendix II</b>	Nominal sizes and geometric properties of cold formed square hollow sections according to EN 10219-2 .....	504
	Nominal sizes and geometric properties of hot finished square hollow sections according to EN 10219-2 .....	509
<b>Appendix III</b>	Nominal sizes and geometric properties of cold formed rectangular hollow sections according to EN 10219-2 .....	513
	Nominal sizes and geometric properties of hot finished rectangular hollow sections according to EN 10219-2 .....	522
<b>Appendix IV</b>	New ultimate joint resistance formulae for uni-planar and multi-planar CHS T, X and XX joints .....	530
<b>Appendix V</b>	New ultimate resistance formulae for welded, uni-planar and multi-planar I beam to RHS column connections .....	534
<b>Appendix VI</b>	New ultimate joint resistance formulae for uni-planar and multi-planar RHS X, XX and TX joints .....	537
<b>References</b>	.....	541
<b>Subject index</b>	.....	565
