Contents

Preface xi

- 1 Introduction and Main Concepts 1**
 - 1.1 "Human Robotics" Approach to Model Human Motor Behavior 1
 - 1.2 Outline: How Do We Learn to Control Motion? 5
 - 1.3 Experimental Tools 7
 - 1.4 Summary 13

- 2 Neural Control of Movement 15**
 - 2.1 Bioelectric Signal Transmission in the Nervous System 15
 - 2.2 Information Processing in the Nervous System 19
 - 2.3 Peripheral Sensory Receptors 21
 - 2.4 Functional Control of Movement by the Central Nervous System 29
 - 2.5 Summary 33

- 3 Muscle Mechanics and Control 35**
 - 3.1 The Molecular Basis of Force Generation in Muscle 35
 - 3.2 The Molecular Basis of Viscoelasticity in Muscle 41
 - 3.3 Control of Muscle Force 44
 - 3.4 Muscle Bandwidth 48
 - 3.5 Muscle Fiber Viscoelasticity 49
 - 3.6 Muscle Geometry 51
 - 3.7 Tendon Mechanics 53
 - 3.8 Muscle-Tendon Unit 55
 - 3.9 Summary 56

- 4 Single-Joint Neuromechanics 57**
 - 4.1 Joint Kinematics 57
 - 4.2 Joint Mechanics 59
 - 4.3 Joint Viscoelasticity and Mechanical Impedance 61

| | | |
|----------|-------------------------------------------------------------------|------------|
| 4.4 | Sensory Feedback Control | 62 |
| 4.5 | Voluntary Movement | 73 |
| 4.6 | Summary | 78 |
| 5 | Multijoint Multimuscle Kinematics and Impedance | 83 |
| 5.1 | Kinematic Description | 83 |
| 5.2 | Planar Arm Motion | 85 |
| 5.3 | Direct and Inverse Kinematics | 86 |
| 5.4 | Differential Kinematics and Force Relationships | 87 |
| 5.5 | Mechanical Impedance | 90 |
| 5.6 | Kinematic Transformations | 93 |
| 5.7 | Impedance Geometry | 95 |
| 5.8 | Redundancy | 99 |
| 5.9 | Redundancy Resolution | 101 |
| 5.10 | Optimization with Additional Constraints | 102 |
| 5.11 | Posture Selection to Minimize Noise or Disturbance | 105 |
| 5.12 | Summary | 107 |
| 6 | Multijoint Dynamics and Motion Control | 111 |
| 6.1 | Human Movement Dynamics | 111 |
| 6.2 | Perturbation Dynamics during Movement | 113 |
| 6.3 | Linear and Nonlinear Robot Control | 113 |
| 6.4 | Feedforward Control Model | 115 |
| 6.5 | Impedance during Movement | 118 |
| 6.6 | Simulation of Reaching Movements in Novel Dynamics | 118 |
| 6.7 | Dynamic Redundancy | 120 |
| 6.8 | Nonlinear Adaptive Control of Robots | 124 |
| 6.9 | Radial-Basis Function (RBF) Neural Network Model | 126 |
| 6.10 | Summary | 129 |
| 7 | Motor Learning and Memory | 131 |
| 7.1 | Adaptation to Novel Dynamics | 132 |
| 7.2 | Sensory Signals Responsible for Motor Learning | 135 |
| 7.3 | Generalization in Motor Learning | 139 |
| 7.4 | Motor Memory | 145 |
| 7.5 | Modeling Learning of Stable Dynamics in Humans and Robots | 151 |
| 7.6 | Summary | 153 |
| 8 | Motor Learning under Unstable and Unpredictable Conditions | 155 |
| 8.1 | Motor Noise and Variability | 156 |
| 8.2 | Impedance Control for Unstable and Unpredictable Dynamics | 160 |

| | | |
|-----------|----------------------------------------------------------------|------------|
| 8.3 | Feedforward and Feedback Components of Impedance Control | 170 |
| 8.4 | Computational Algorithm for Motor Adaptation | 176 |
| 8.5 | Summary | 182 |
| 9 | Motion Planning and Online Control | 185 |
| 9.1 | Evidence of a Planning Stage | 185 |
| 9.2 | Coordinate Transformation | 188 |
| 9.3 | Optimal Movements | 189 |
| 9.4 | Task Error and Effort as a Natural Cost Function | 191 |
| 9.5 | Sensor-Based Motion Control | 193 |
| 9.6 | Linear Sensor Fusion | 196 |
| 9.7 | Stochastic Optimal Control Modeling of the Sensorimotor System | 198 |
| 9.8 | Reward-Based Optimal Control | 202 |
| 9.9 | Submotion Sensorimotor Primitives | 204 |
| 9.10 | Repetition versus Optimization in Tasks with Multiple Minima | 207 |
| 9.11 | Summary and Discussion on How to Learn Complex Behaviors | 209 |
| 10 | Integration and Control of Sensory Feedback | 211 |
| 10.1 | Bayesian Statistics | 212 |
| 10.2 | Forward Models | 220 |
| 10.3 | Purposeful Vision and Active Sensing | 225 |
| 10.4 | Adaptive Control of Feedback | 227 |
| 10.5 | Summary | 233 |
| 11 | Applications in Neurorehabilitation and Robotics | 235 |
| 11.1 | Neurorehabilitation | 235 |
| 11.2 | Motor Learning Principles in Rehabilitation | 236 |
| 11.3 | Robot-Assisted Rehabilitation of the Upper Extremities | 238 |
| 11.4 | Application of Neuroscience to Robot-Assisted Rehabilitation | 240 |
| 11.5 | Error Augmentation Strategies | 241 |
| 11.6 | Learning with Visual Substitution of Proprioceptive Error | 243 |
| 11.7 | Model of Motor Recovery after Stroke | 245 |
| 11.8 | Concurrent Force and Impedance Adaptation in Robots | 246 |
| 11.9 | Robotic Implementation | 247 |
| 11.10 | Humanlike Adaptation of Robotic Assistance for Active Learning | 249 |
| 11.11 | Summary and Conclusion | 250 |
| | Appendix | 253 |
| | References | 257 |
| | Index | 275 |
