CONTENTS

Introduction

1 Basic Mathematical Concepts 1

1.1 What You Should Learn from This Chapter 1
1.2 Functions 1
1.3 Functions of One Independent Variable: Slopes and Derivatives 6
1.4 Functions of Two or More Independent Variables: Partial and Total Derivatives 12
1.5 Second Partial Derivatives and Second Total Differentials 18
1.6 More Worked Problems Involving Partial and Total Derivatives 20
1.7 Simple Integration 21
1.8 Review of Key Concepts 24
1.9 Questions for Discussion 25
1.10 Problems 25
1.11 Appendix: Review of Differentiation Rules and Simple Formulas 26

2 Unconstrained Maximization and Minimization 28

2.1 What You Should Learn from This Chapter 28
2.2 Functions of One Independent Variable: Unconstrained Maximization and Minimization 29

2.3 Total, Average, and Marginal Functions of One Variable 34
2.4 Functions of Several Independent Variables: Unconstrained Maximization and Minimization 41
2.5 One-variable Comparative Statics, Implicit Functions, and the Unconstrained Envelope Theorem 46
2.6 More Worked Problems Involving Optimization of Functions of Two Independent Variables 50
2.7 Review of Key Concepts 52
2.8 Problems 53
2.9 Appendix: Relationships Among the Second Total Differential and the Second Partial and Cross Partial Derivatives for Maxima and Minima for Two-variable Functions 53

3 Constrained Optimization 55

3.1 What You Should Learn from This Chapter 55
3.2 One-variable Constrained Optimization 55
3.3 One-variable Constrained Optimization with a Nonnegativity Constraint 56
3.4 Two-variable Problems with Equality Constraints 58
3.5 Techniques for Solving Two-variable Constrained Optimization Problems 63
3.6 The Lagrange Method 68
3.7 Nonnegativity Constraints: Kuhn-Tucker Conditions for Constrained Optimization with Two Choice Variables and One Constraint 77
3.8 More Worked Problems Involving Constrained Optimization 84
3.9 Review of Key Concepts 86
3.10 Problems 87
3.11 Appendix: Second-order Conditions for Two-variable Constrained Optimization 87

4 Introduction to Economic Theory and the Market Economy 89

4.1 What You Should Learn from This Chapter 89
4.2 The Role of Models in Economics 89
4.3 The Economic Problem: Resource Allocation 92
4.4 The Market Economy 94
4.5 The Model of Perfect Competition 98

4.6 Monopoly, Externalities, and Public Goods 99
4.7 Review of Key Concepts 101
4.8 Questions for Discussion 102

5 Consumer Preference Theory 103

5.1 What You Should Learn from This Chapter 103
5.2 Cardinal Versus Ordinal Utility: A Historical Introduction 104
5.3 The Modern Theory of Consumer Preference 105
5.4 Two Utility Functions That Satisfy Axioms 1–6 114
5.5 Utility Maximization 115
5.6 The Revealed Preference Approach 118
5.7 Lump-sum and Per-unit Taxes and Subsidies: An Application of Revealed Preference 121
5.8 Using Revealed Preference to Derive Indifference Curves: A Case Study from Experiments with Rats 127
5.9 Review of Key Concepts 129
5.10 Questions for Discussion 130
5.11 Problems 131
5.12 Logical and Mathematical Applications 131

6 Introduction to Consumer Demand Theory 132

6.1 What You Should Learn from This Chapter 132
6.2 Consumer Demand Functions: Graphical Development 132
6.3 The Ordinary Demand Function: Changes in Demand and Changes in Quantity Demanded 140
6.4 Generalized Demand Functions 142
6.5 Elasticity of Individual Demand Functions 146
6.6 Cobb-Douglas Utility and Demand Functions and Estimation: How Economists Use Specific Demand Functions 149
6.7 Income and Substitution Effects and Downward-sloping Demand: Graphical Illustration 152
6.8 Another Worked Problem: Finding the Generalized Demand Function 158
6.9 Review of Key Concepts 159
6.10 Questions for Discussion 160
6.11 Problems 161
6.12 Logical and Mathematical Applications 161

7 Trading Among Consumers: An Application of Demand Theory 163

7.1 What You Should Learn from This Chapter 163
7.2 Trade in the Edgeworth Box 164
7.3 Solving for a Competitive Equilibrium in a Two-person, Two-good Economy: An Example 171
7.4 Efficiency 174
7.5 The Distributional Problem 176
7.6 Other Resource Allocation Processes and Pareto Optimality 179
7.7 Review of Key Concepts 181
7.8 Questions for Discussion 182
7.9 Problems 182

8 Compensated Demand Functions 183

8.1 What You Should Learn from This Chapter 183
8.2 The Compensated Demand Function 184
8.3 The Expenditure Minimization Problem 186
8.4 Deriving Compensated Demand Functions and the Expenditure Function: An Example 189
8.5 Mathematical Treatment of Income and Substitution Effects 193
8.6 The Slutsky Equation 195
8.7 Substitution Elasticity and the Size of the Substitution Effect 198
8.8 Consumer's Surplus Analysis 202
8.9 Practical Applications of Consumer's Surplus Analysis 206
8.10 Another Worked Problem Involving Expenditure Minimization 211
8.11 Review of Key Concepts 212
8.12 Questions for Discussion 214
8.13 Problems 214
8.14 Logical and Mathematical Applications 215

9 Market Demand Functions and Demand Elasticity 216

9.1 What You Should Learn from This Chapter 216
9.2 Market Demand Functions 216
9.3 Changes in the Parameters of Market Demand: The Case of the Baby Boom 218
9.4 Elasticity of Demand 219
9.5 Elasticity and Total Revenue 222

9.6 The Farm Problem in Historical Perspective: The Effect of Price and Income Inelasticity 225
9.7 How Estimates of Elasticity Are Used for Policy Analysis 226
9.8 Review of Key Concepts 227
9.9 Questions for Discussion 228
9.10 Problems 228
9.11 Logical and Mathematical Applications 229

10 Production Theory 230

10.1 What You Should Learn from This Chapter 230
10.2 The Production Function 230
10.3 Recovering Isoquants by Observing Production Choices 234
10.4 Output Expansion in the Long Run 237
10.5 Output Expansion in the Short Run 238
10.6 Diminishing Returns 243
10.7 Review of Key Concepts 245
10.8 Questions for Discussion 245
10.9 Problems 246
10.10 Logical and Mathematical Applications 246
10.11 Appendix: Proof of the Proposition That Constant Returns Imply Diminishing Marginal Products 247

11 Cost Functions 248

11.1 What You Should Learn from This Chapter 248
11.2 Economic Costs 249
11.3 Cost Minimization 251
11.4 Elasticity of Substitution 253
11.5 Long-run Cost Functions 255
11.6 Long-run Cost Functions and Returns to Scale 258
11.7 Using the Cobb-Douglas Production Function: One Way Economists Estimate Long-Run Cost Functions 263
11.8 Short-run Costs with One Variable Input 266
11.9 Short-run Costs with Two or More Variable Inputs 274
11.10 Multiproduct Firms 276
11.11 The Relationship Between Short-run and Long-run Costs 278
11.12 Review of Key Concepts 283
11.13 Questions for Discussion 285
11.14 Problems 286
11.15 Logical and Mathematical Applications 286

12 Profit Maximization by a Competitive Firm: Supply of Goods and Demand for Inputs 288

12.1 What You Should Learn from This Chapter 288
12.2 Competitive Profit Mazimization and Short-run Supply 288
12.3 Changes in Short-run Supply 291
12.4 Profits and Short-run Shutdown 297
12.5 Short-run Demand for One Variable Input 301
12.6 Short-run Input Demand with Two or More Variable Inputs 305
12.7 Shifts in Short-run Input Demand Functions 306
12.8 The Computer Software Company's Short-run Supply Curve and Short-run Labor Demand Curve 308
12.9 "Sunk" Costs and Economic Decision Making 310
12.10 Review of Key Concepts 311
12.11 Questions for Discussion 313
12.12 Problems 314
12.13 Logical and Mathematical Applications 314

13 Competitive Market Supply, Market Equilibrium, and Comparative Statics 315

13.1 What You Should Learn from This Chapter 315
13.2 Short-run Market Supply Functions 315
13.3 Short-run Competitive Equilibrium 317
13.4 Experimental Markets: An Illustration of Competitive Equilibrium 320
13.5 From Short-run to Long-run Equilibrium 323
13.6 Long-run Market Supply Under Competition 329
13.7 Short-run and Long-run Adjustments to Changes in Demand and Supply Parameters: Comparative Statics in Competitive Markets 331
13.8 The Comparative Statics and Incidence of a Per-unit Tax 334
13.9 Deadweight Loss from a Per-unit Tax 339
13.10 Review of Key Concepts 341
13.11 Questions for Discussion 342
13.12 Problems 343
13.13 Logical and Mathematical Applications 344

14 Production Efficiency and General Equilibrium of Competitive Markets 345

14.1 What You Should Learn from This Chapter 345
14.2 Efficiency in Production 346
14.3 Utility Maximization over the Production Possibilities Frontier 355
14.4 Pareto Optimality with More Than One Consumer 360
14.5 General Equilibrium in a Competitive Economy 364
14.6 Comparative Statics in a General Equilibrium Framework 368
14.7 Review of Key Concepts 371
14.8 Questions for Discussion 373
14.9 Problems 373
14.10 Logical and Mathematical Applications 374

15 Monopoly 375

15.1 What You Should Learn from This Chapter 375
15.2 Profit-maximizing Output and Input Decisions Under Monopoly 376
15.3 Welfare Loss from Monopoly 382
15.4 Price Discrimination 386
15.5 Peak-load Pricing 392
15.6 Natural Monopoly and Regulation 393
15.7 Review of Key Concepts 399
15.8 Questions for Discussion 401
15.9 Problems 401
15.10 Logical and Mathematical Applications 402

16 Oligopoly and Imperfect Competition 404

16.1 What You Should Learn from This Chapter 404
16.2 Interdependent Firms and Nonzero Sum Games 405
16.3 The Cournot Duopoly Model and Extensions 411
16.4 Conjectural Variation 418
16.5 Consistent Conjectural Variations 421
16.6 The Stackelberg Model 422
16.7 The Model of Monopolistic Competition 424
16.8 The Theory of Contestable Markets 428

16.9 Repeated Games and Tacit Collusion 429
16.10 Monopoly and Oligopoly Experiments 430
16.11 Review of Key Concepts 433
16.12 Questions for Discussion 435
16.13 Problems 436
16.14 Logical and Mathematical Applications 436

17 Time Allocation, Labor Supply, and Labor Markets 437

17.1 What You Should Learn from This Chapter 437
17.2 The Simple Model of Time Allocation and Labor Supply 438
17.3 The Backward-bending Labor Supply Curve 443
17.4 Overtime Pay: An Application of the Labor Supply Model 445
17.5 The Household Theory of the Allocation of Time 446
17.6 Competitive Labor Market Equilibria 450
17.7 Wage Differentials in a Competitive Market 451
17.8 Imperfect Labor Markets: Monopsony 452
17.9 Economic Rent and the Welfare Implications of Monopsony 455
17.10 Unions 457
17.11 Unique Factor Endowments 459
17.12 Review of Key Concepts 459
17.13 Questions for Discussion 461
17.14 Problems 462
17.15 Logical and Mathematical Applications 462

18 Intertemporal Decisions and Competitive Capital Markets 463

18.1 What You Should Learn from This Chapter 463
18.2 The Two-period Intertemporal Decision Model 464
18.3 The Supply Function for Savings 470
18.4 Discounted Present Value 473
18.5 Determining the Equilibrium Rate of Interest 476
18.6 Human Capital and the Demand for Educational Services 478
18.7 Exploitation of Nonrenewable Natural Resources 480
18.8 Renewable Natural Resources: Trees 482
18.9 Optimal Management of a Fishery 485
18.10 Review of Key Concepts 488
18.11 Questions for Discussion 490
18.12 Problems 491
18.13 Logical and Mathematical Applications 491

19 Uncertainty: The Basics 492

19.1 What You Should Learn from This Chapter 492
19.2 Introduction to Probability Theory and Risk Preference 493
19.3 Expected Utility and the von Neumann–Morgenstern Utility Function 497
19.4 Insurance Markets 502
19.5 Futures Contracts and Other Long-term Contracts as Insurance 507
19.6 Contingent Claims and the State-preference Model 508
19.7 Review of Key Concepts 515
19.8 Questions for Discussion 517
19.9 Problems 518
19.10 Logical and Mathematical Applications 518

20 Applications of Uncertainty Models 519

20.1 What You Should Learn from This Chapter 519
20.2 Moral Hazard in Insurance Markets 520
20.3 Adverse Selection 525
20.4 The Principal-Agent Problem 529
20.5 Risk Sharing and the Principal-Agent Problem in Labor Contracts 532
20.6 The Market for Lemons 534
20.7 Reputations, Signalling, and Warranties 536
20.8 Review of Key Concepts 539
20.9 Questions for Discussion 541

21 Externalities, Public Goods, and Public Decision Making 542

21.1 What You Should Learn from This Chapter 542
21.2 Optimal Levels of Externalities When Only Firms Are Affected by the Externalities 543
21.3 Optimal Allocation of an Externality That Affects Consumer Utility 548
21.4 Optimal Provision of Pure Public Goods 550
21.5 Externalities and Public Goods in Competitive Markets 556
21.6 Pigouvian Taxes and Lindahl Prices 557
21.7 Problems with the Implementation of Optimal Taxes 559
21.8 Evidence on Free Riding 562
21.9 Coasian Bargaining 564
21.10 Evidence on the Usefulness of the Coase Theorem 569
21.11 Incentive-compatible Allocation Mechanisms 573

21.12 Experiments on Incentive-compatible Allocation Mechanisms 577
21.13 The Arrow Problem in Public Decision Making 580
21.14 Review of Key Concepts 582
21.15 Questions for Discussion 585
21.16 Problems 586
21.17 Logical and Mathematical Applications 586

Answers to Selected Odd-numbered Problems 587
